

TRUMPET OF DAME GRUNDY

Highly Developed Girl of Today is Straight as an Ash and auple as a Willow.

COULD PUT THE GREEK MAID TO BLUSH

Women Devoting More Time to Cultivating Muscle and Form—A Few Pieces of Advice About Care of the Feet—Feminine Facts and Fancies.

The millennium, for which the world waits, is to come with woman's perfect physical development.

This is one of the ideas put forth by Edward Bellamy, and that the good time must be nigh at hand who can question? For do we not behold both on the right hand and on the left a devotion to the cultivation of one's muscle that might even put the Greek maiden of Plato's republic to shame?

This is as it should be—hips and chests and shoulder blades need all the attention that can be given to them.

Three hours of leisure devoted at least three hours to athletic exercises in some form or other. The woman of business gives ten minutes, daily, which is better than nothing, for physical development.

To suggest simple exercises which one can take at home is the purpose of this article. If possible, how easily and quickly one can go through with a few gymnastics every morning and evening, without spending too much valuable time, and without the aid of very costly apparatus, in many cases without any at all.

In some instances, one exercise which helps to expand the chest, raise the shoulders, and gives erectness to the form—three great considerations—is prescribed by an authority.

Bring forward the arms, raise the forearms, and place the fingers of each hand lightly on the front of each shoulder. Then, with a quick movement and without removing the fingers from the shoulders, jerk the arms outward, then back again and repeat.

Another exercise: Stand quiet erect, extend the arms above the head, interlace the thumbs and keep the forefingers in touch. Then, keeping the arms quite rigid, bend the trunk gradually until, without unloosening the thumbs, the fingers touch the toes. This is a very good exercise, seldom successful without a little practice.

There isn't a better investment for \$5 (you can pay more) than a chest weight, and they make them nowadays disguised as book cases with curtains, so that they are not conspicuous as furniture for one's bedroom or boudoir.

"I have used the chest weight daily for twenty-three years, and I would give up every other piece of apparatus in my gymnasium use before parting with it," says one enthusiastic admirer.

"This is a light, for it is something the old can use as well as the young; the weak as well as the strong, with pleasure, safety and profit, and the more faithfully you use it the better the results."

One of the first exercises with the chest weight is the following: Stand perfectly erect, with the back to the apparatus, and with the right hand resting on the arms straight forward; this develops the muscles of the chest and arms. Then turn about and pull the right hand up and over the muscles of the back and the arm flexors (they come into play). Next raise the arms above the head and force the weights backward; this is a motion which is repeated on the left, back, the neck and the extensor muscles of the arms. Bend back still further and the small of the back is acted upon beneficially.

It is a good idea to have a small, sensitive portion of the body, the abdomen, will be strengthened. The abdominal muscles need more exercise than any other part of the body, and as a rule, they get least.

The abdomen is held to all kinds of complaints, to remove the most of which only proper exercise is necessary.

In using this pulley it should be remembered that a light weight is best. It is not the number of strokes of pulling that counts, it is the rapidity with which the motions are made. Forty strokes to the minute is about the average, although one sometimes becomes expert enough to run the number up to eighty.

With the chest weight about twenty or thirty minutes should be spent daily—a new motion being made as soon as the old one becomes tiresome—ten minutes work with the chest weight is, however, better than no work at all.

Mrs. Van Rensselaer Cruger, "Julian Gordon," believes in this apparatus, and one forms part of the furnishing of her bedroom. She uses it with religious regularity, both night and morning, and if the fitness of her form is to be maintained, she uses there can be no better argument in its favor.

Punching an inflated rubber bag is a pet exercise with certain young girls, which they wish to be straight as an ash and as supple as a willow.

This mode of procedure is something like this: The bag must be hung in such a manner as to rebound almost instantly after being struck. It should be set in motion by the hand, and the right hand should be approaching. The face should be kept toward the bag and the blows be made from the shoulder. The right kind of a bag is of the same shape and about the size of a Rugby football. It is inflated with air and secured to the ground and ceiling by rubber.

The use of the striking bag brings all of the muscles into play, either directly or indirectly—the eyesight, even, is quickened and improved. The balls are somewhat expensive, \$5 being the price asked for balls suitable for women and children's use—the very best leather covered striking bags cost all the way from \$2 to \$5 and weigh from ten to twenty-five pounds.

Mrs. Duncan Elliott is an advocate of the striking bag and also of Indian clubs, which she considers a fascinating form of exercise. Their use develops the muscles of the wrist, arms and to some extent the shoulders and back.

One word more—when to exercise is an important consideration. The afternoon or evening is better than the morning, and exercise should be preceded by bathing, and not, as a rule, follow it.

A man who has made the human foot an object of research has discovered that the upper short stockings are very nearly as injurious as short shoes. These of insufficient length wear the knuckles of the toes upward, and when the shoe forces them down the natural result is a painful excoriation that vulgar folks designate as a corn.

But surely this is not an ill fitting stocking the cause of bunions, do you inquire?

"Corns are the result of pressure. You see the big toe is forced from the sebaceous glands, therefore an excessive or unnatural quantity of oil is thrown off, and the corn is formed, and the oil forces its way to the surface of the toe. As it reaches the cuticle it evaporates, leaving the top layer hard. Layer upon layer of this hard material builds up until it presses on the nerves. Corns have no roots. That idea is fallacious. Even when they cannot be removed, an instrument goes beneath all these layers of the corn and removes them. A soft corn is more easily treated and is largely the result of acid in the shoe.

"After a corn has been removed, find out literally where the shoe pinches, then bathe the feet in cold water every morning upon arising and rub the part with prepared chalk."

My informant added that for dry feet, always use ice cream. The water is best, inclined to perspire freely, the dry feet as the skin can stand it, and bathe just before walking, put a little vinegar in the hot water; if they ache, use a few drops of ammonia or borax.

Rest your feet often. To do this change the shoes as frequently as possible. Even from an old to a new shoe is a rest. The muscles of the foot tire in one position, no matter how easy the leather or last may be. Four or five times a day, if it is convenient, is none too often to take this trouble, and the benefits are abundant.

Ingrowing nails are the result of the corners being cut too close, allowing the shoe to press against them. This again requires skilled treatment. The pedicure's patronage is becoming as extensive as that of the man-

age, for, apart from the treatment of painful excoriation, beautifying the foot is greatly in vogue. Preparations to which the skin is treated, and all the cuticle and membrane is called upon to assist that of the pedicure. Some society women can now present as well kept a foot as had the nails rounded and polished with equal distinctness.

One other suggestion the man who knows gave me, and that is important to mothers. He says that when learning to walk, children should not be allowed to wear the popular paper-soled shoes. A stiff bottom should be supplied, for small feet are apt to set in from rubbing the edges of the toes on the floor.

Princess Bismarck, nee Johanna Puttkamer, although her personality has always been overshadowed by that of her great husband, is a remarkable and interesting woman. The story of Bismarck's falling in love with her, and so to speak, marrying her by main force, is often told in Germany. The princess, who was married at the age of sixteen, was devoted to her husband, and even when occupied with the most important official duties he made a rule of going in to speak to his wife every few hours.

Princess von Bismarck is now nearer 70. She has snow white hair, a pair of figure, and her countenance would be extremely agreeable were it not for the high forehead which her children have inherited. She is a woman as her husband is a man, and has good reason to be proud of the physical appearance of her children.

Princess Louise, visited Friedrichruh of late years declare that she is vivacious and amusing in the family circle, and that although she is a great hostess, she is not inclined to absorb the major part of the conversation, she has a vast fund of stories and anecdotes and a keen sense of German humor which she freely displays. She is much as she felt her husband's semi-distant, Bismarck's helpmate is far happier than his wife. He is an active householder and country life that she has formerly been obliged to lead in Berlin. The late Empress Augusta had no particular love for the Iron Chancellor's wife, and it is said that the Empress Frederick included her in the fear and dislike she could not conceal for Prince Bismarck.

Princess rises almost with the sun, and till quite recently took an active part in preparing every one of the meals eaten by her family. Her greatest personal peculiarity is a horror of cold and draught; like the princess of Wales, the moment she sets her foot inside a house, even if it be another winter's design, she is sure to close every door and every window shall be at once closed. This is the real reason why the princess seldom goes to stay with any one but among her children or her favorite Count Herbert, and she has presented his young wife, among other useful presents, with quite a number of winter coats.

Two-toned driving gloves are a novelty. They have double palms and gauntlet tops. New military garmettes show beautiful styles in shades of green and olive. Four-button black suede gloves are fancy stitched in white, and have white silk seam.

A band of ribbon in irregular folds across the front and finished with a row of rosettes is especially becoming.

A new and elegant fabric for evening wear has a ground of ivory with noise on which are tossed long streamers in color.

So long as ball on sleeves and spreading shoulder effects prevail, draperies, except of the simplest description, will remain in the background.

Dogskin gloves in gray or reddish brown, stitched in a darker shade of silk, and fastened with four large buttons, are used for traveling and shopping.

Yellow and white gowns, milliners' folds about an inch and a half wide, and narrow ruffles and tiny lapping frills will all be employed to decorate the bottom of autumn dresses.

It is whispered by modistes who are in league with the arbiters of fashion beyond the sea that hats and bonnets are to be worn back on the head, and that the crown is to be largely used this winter. It appears in all the evening shades.

This season it seems to be the trimming on the gown that gives the style. Hats are beautiful faces and jet and chiffon and great variety of trimmings used, but ribbon holds its own among all others.

The new black-and-white gowns prevailing at day weddings and receptions are in soft and flattered patterns in shepherd's check silks of rich quality, and in stripes, plaids and narrow, in silk and satin alternately.

Round waists continue in high favor, and the seamless bodice is still used for all to whom it proves becoming, as well as for a more strict following of "style" to whom it proves quite the reverse.

For decorating handsome evening gowns of brocade or shot silk is the new velours polkae, a deep shade of red, which is to be largely used this winter. It appears in all the evening shades.

The wedding dowry of the women of the Vanderbilt family is \$50,000 per annum. Japan boasts of but one woman lawyer—Miss Tei-Sino. There are about 100 in this country, and it is said there are none in England.

In Holland a lady is expected to retire precipitately should she enter a store or restaurant where the receptionist waits until they have transacted their business and departed.

Queen Margherita of Italy is an enthusiastic bicyclist. She is a regular rider every day in the Quirinal gardens and "all Rome has loyally followed royalty's lead and the cycle mania reigns supreme."

The latest word of Parisian eccentricity is that "pet dogs in Paris are now dyed to harmonize with the prevailing tint of their mistress' s bodice. Two shades of violet are now the most popular coloring for white dogs."

What is called the rational cycling costume for women is in danger of going out of existence in Paris, for the prefect has caused letters to be written to each of the women cyclists, cautioning them that they are infringing the law in wearing man's clothes.

Senator Blair has introduced two bills in congress for the manual training of women. One is for instruction in the art of cooking, reading, care of health and nursing the sick and another for a school of mechanical arts and instruction in the culture, care and training of domestic animals.

A Russian Jewess, Miss Faronovski, of Odessa has successfully learned to choose a trade. She has learned watch making, and having been awarded the diploma of master watchmaker by the trades council in Odessa, she has come to New York as the first Russian woman to adopt a trade hitherto monopolized by men.

The London papers announce with some pride that Miss Wren, the woman entrusted with the duty of looking after the baby English prince at White Lodge while his mother is in Switzerland, has been instructed to send a letter every day to appease the anxiety of his parent. This is not wonderful at all. Few young mothers would do less, leaving the first born at the tender age of 2 months.

Miss Frances Willard divides her twenty-four hours into three periods: Eight hours for work, eight hours for sleep and eight hours for rest. In fact, the women who would find the latter period the hardest one to hold to their text. The doing of any work and the wearing of any dress, accumulated duties pressed upon the mind, and the anxiety of the day would often be consumed in finding time to do as she pleased.

In the United States there are 2,000 women practicing medicine, who are specialists in the diseases of their own sex, seventy are alienists, sixty-five orthopedists, forty oculists and ophthalmologists, thirty electro-therapists. Seventy women hold appointments on the medical staff of hospitals and ninety-five are teachers in medical schools. Of the 100,000 are said to be homopaths, while 500 are classed as "allopaths." What particular "pathy" is professed by the remainder is not stated. There are ten cases of medicine for women in the states, one of which is homeopathic.

Cook's Imperial World's Fair "biggest award, excellent champagne, good service, agreeable bouquet, delicious flavor."

BEARING THE PANTHER IN HIS LAIR

A Hunter's Thrilling Adventures in the Jungles Where Natives Dare Not Go—The Beasts Lured to Death at Night.

(From the French of M. Bourbonnelli)

It is with interest I recall the fact that my first great game was killed in a ravine nine years ago, when I had been hunting and crossed by a panther several times within twenty-four hours. He had even passed over since the rain, which had ceased only at 6 o'clock in the morning. It was then at the sum of my observations. It was then 4 o'clock in the afternoon. I sent my man to bring me a goat and he did so as quickly as possible.

"All right, ma'am," said the man soberly. "Thank me for that. I'll remember, sir."

"Thank you kindly, sir," she answered gratefully. "I'm much obliged to you."

"While we have been away this summer," related a woman, "I went to the city, and I respectively, learned for the first time to read by reading three chapters every week day and five on Sunday the bible could be finished in a week. I had the book with me, and to begin and all would have been well, except that there was only one bible between us. This fact created difficulty every day, for with the presence of children, they invariably selected the same time to do their reading. The climax was reached the other day when I found them deep in their favorite books of eridage, and was unable to interrupt them, because Annie and I were playing a game of cribbage to see which of us can have the bible first."

The struggle to make paniers a success still continues. The Burdon lace for this season are in decorative designs.

Military laces have the design outlined with tiny paillettes or spangles.

New crepe-finished wools are imported for autumn and winter tailor gowns.

White leather driving gloves are loosely fitted and have perforated palms.

Two-toned driving gloves are a novelty. They have double palms and gauntlet tops.

New military garmettes show beautiful styles in shades of green and olive.

Four-button black suede gloves are fancy stitched in white, and have white silk seam.

A band of ribbon in irregular folds across the front and finished with a row of rosettes is especially becoming.

A new and elegant fabric for evening wear has a ground of ivory with noise on which are tossed long streamers in color.

So long as ball on sleeves and spreading shoulder effects prevail, draperies, except of the simplest description, will remain in the background.

PHILLOUS MOMENT

It was about 10 o'clock when my goat, standing at the door, suddenly began to tremble in every limb, in fits of nervous anguish. She suddenly became silent and to draw away from me as if I had frightened her. I immediately understood that the wind, which was at my back, brought her tidings of great danger. With the utmost precaution I turned half way around and saw through the trees two glowing coils of fire, perfectly motionless. Holding my breath, my face all the while covered with perspiration, I dared not stir, and away I took aim. The head of my rifle shone with full brilliancy; the two lamps went out, and slow, light footsteps scarcely rustled on the dry grass. The stealthy steps drew near. Seeing nothing, I was beginning to feel anxious, when suddenly a large open eye glanced out, apparently in contact with my rifle. I fired, saw a mass rise in front of me like a rearing horse; it was the panther. My rifle shot not long delayed. Taking effect in the breast, it threw the beast on his back at a distance of eight meters from me. I sprang back, my rifle in my hand, expecting to see the animal rise and stagger on three powerful, irregular sighs, and then nothing more.

Five minutes later I went up to examine the beast; she was stiff. It was a female of medium size, measuring two meters eighty-five centimeters from the nose to the tip of the tail. Her coat was black, and her steel pointed ball which had entered under the right eye, pierced the head and had made its exit at the left shoulder; with the second bullet she had been killed. I was with twenty-four large moose.

MY THIRD PRIZE. Accompanied by Nabl, a clever Arab who spoke French fluently and at the same time understood the idioms of the country, we left the house of the Panier, a triangle situated on the coast, where two days before a panther had eaten an ox. The remnant of the carcass had not yet been touched by the jackals, proof being that the beast was not far away. Nabl introduced me to the chief of this tribe, Aghasus, who, after the usual compliments, begged me to accept of his presence among them, and then inquired in what manner I intended to hunt the panther.

ASTONISHING THE NATIVES. When my interpreter had explained my method, he shook his head with a look of incredulity, and then he said to me: "I was crazy. He said it was impossible that a sane man would stay alone in the forest with a panther, especially when he took a rifle to slay the animal. Let him see me with a panther, he said, and he would be obliged to go, you would build a fire to keep the animal at a distance. I am not willing to be responsible for this kind of death. If he spends the night in the ravine he will certainly be devoured, and the Arabian bureau will call us to account for this panther. He will see to it that you are left in a fury, followed by my escort. I only hoped the panther would devour them and their cattle together."

The Arabs were not to be deterred. Let him see me with a panther, he said, and he would be obliged to go, you would build a fire to keep the animal at a distance. I am not willing to be responsible for this kind of death. If he spends the night in the ravine he will certainly be devoured, and the Arabian bureau will call us to account for this panther. He will see to it that you are left in a fury, followed by my escort. I only hoped the panther would devour them and their cattle together."

When we arrived we found the cow encircled by the goat. At the top of a hill, near a deep, wooded ravine, we found a small, open, sloping field with a clump of bushes; this was the post which I selected for my camp. The goat was in front of me, and higher up, so that to me, sitting below, she was in relief against the sky. The kid was in my arms, and my hunting gun against my side. We traveled seventy kilometers.

On the fourth evening at 10 o'clock the kid cried, and the mother failed to answer.

A GOOD SHOT. Suddenly on my right I heard the branches of a tree rustled, and at the same moment my poor goat uttered her dying piteous cry. The panther was upon her, held her in his powerful claws and grasped her head with his teeth. I saw the animal's face full in front of me. I could see his head perfectly. I attempted to take aim, but the shot of my rifle fell so far and so long that I had therefore been fastened up with a pin, fell down and at this instant dropped over the hammer of my gun, hindering me from both sides. I rose up again, and using every possible precaution pulled up the sleeve. I then took aim, and fired. The animal was full of lead, and I had made the panther let go the goat's head, but continued to grasp her in his paws. He looked toward me, as if to inform himself of my position, and I had therefore been fastened up with a pin, fell down and at this instant dropped over the hammer of my gun, hindering me from both sides. I rose up again, and using every possible precaution pulled up the sleeve. I then took aim, and fired. The animal was full of lead, and I had made the panther let go the goat's head, but continued to grasp her in his paws. He looked toward me, as if to inform himself of my position, and I had therefore been fastened up with a pin, fell down and at this instant dropped over the hammer of my gun, hindering me from both sides. The animal was full of lead, and I had made the panther let go the goat's head, but continued to grasp her in his paws. He looked toward me, as if to inform himself of my position, and I had therefore been fastened up with a pin, fell down and at this instant dropped over the hammer of my gun, hindering me from both sides. I rose up again, and using every possible precaution pulled up the sleeve. I then took aim, and fired. The animal was full of lead, and I had made the panther let go the goat's head, but continued to grasp her in his paws. He looked toward me, as if to inform himself of my position, and I had therefore been fastened up with a pin, fell down and at this instant dropped over the hammer of my gun, hindering me from both sides.
