

PULSE OF WESTERN PROGRESS.

Phenomenal Showing of an Ore Strike in the Pike's Peak Mine.

ONE SAMPLE RUNS NEARLY HALF GOLD.

What Integers are Doing for New Mexico—Galena in Washington—New Gold Fields in Idaho—General Western News.

Manager F. L. McCroskey of the Pike's Peak mine at Cripple Creek has had four assays made by J. P. Staats from a narrow streak of ore in the second level. The returns were wonderful. No. 1 gave 20.92 ounces of gold... No. 2, 14.49 ounces, and No. 4, 20.20 ounces to the ton.

The Pike's Peak has more ore in sight now than ever before in the history of the mine, says a special to the Denver Republican. The Portland people have opened up a vein on their White Hawk property, the one from which exceeds in value anything heretofore found in this consolidation.

In the Globe claim, one of the properties of the Summit Mining company, an enormous body of ore has been opened in the last four days. Nothing is more equal to it in fact, its width and length are not yet known, but along the vein, if there is a vein, it has been opened for a distance of about 100 feet and a crosscut twenty-five feet long is still in ore.

A man by the name of Campbell has a fracture about half way up the south side of Mineral Hill, which is developed by an open cut. So far, he has not cut the vein, or if so, it is badly broken up, but for all that, the vein is a piece of rock he throws out contains free gold that is visible to the naked eye.

In the Lucky Queen the other day, located only a few hundred feet from the office, the vein widened out to four feet in a drift that is being run from the bottom of the shaft eighty-five feet from the surface. An assay had on a large sample returned a value of \$25 in gold to the ton.

The Pike's Peak mine at Cripple Creek has had four assays made by J. P. Staats from a narrow streak of ore in the second level. The returns were wonderful. No. 1 gave 20.92 ounces of gold... No. 2, 14.49 ounces, and No. 4, 20.20 ounces to the ton.

IRRIGATION IN NEW MEXICO. The Peck Irrigation and Improvement company has over 132 miles of main ditches and 1,200 miles of laterals, said a delegate at the recent irrigation convention at Denver.

"Of our ancient system of irrigation, the entire Rio Grande valley, 400 miles long, and the Chama river valley, 100 miles long, were settled by the Pueblos for many hundreds of years, and by the Spaniards for the past 200 or 300 years, are samples, and from these rivers many miles of laterals extend."

"With the exception of small portions of land in the mountainous regions, called by the natives the sierras, the entire country is irrigated. The storage system is the one in use generally, and storage reservoirs of the most modern type are being constructed in the mountains of New Mexico."

"We also want the next irrigation congress in Albuquerque. If it is held there we will assist the people of that city in every way, and quality of the fruits and other products of the country. We will also show them the aid and new civilization and how they have devastated it to make a prosperous country."

TO RECLAIM THE DESERT. An irrigation project of the greatest importance to the West is the one known as "The Desert" is on the eve of being launched. In brief, the waters of Green river are to be taken out of their natural bed and made to flow in a new channel, a waterway under the dominion of the horticulturist.

The head of the Gannon valley is twelve miles north of Green River station (Blake postoffice), on the line of the Rio Grande Western railway, says the Salt Lake Tribune, and lying east of the mountain range, the railway are about 10,000 acres of land that have been pronounced by the best horticultural authorities as being better adapted to the requirements of the fruit industry than any other portion of the undeveloped west.

The head of the Gannon valley is twelve miles north of Green River station (Blake postoffice), on the line of the Rio Grande Western railway, says the Salt Lake Tribune, and lying east of the mountain range, the railway are about 10,000 acres of land that have been pronounced by the best horticultural authorities as being better adapted to the requirements of the fruit industry than any other portion of the undeveloped west.

THE HEAD OF THE GANNON VALLEY. The head of the Gannon valley is twelve miles north of Green River station (Blake postoffice), on the line of the Rio Grande Western railway, says the Salt Lake Tribune, and lying east of the mountain range, the railway are about 10,000 acres of land that have been pronounced by the best horticultural authorities as being better adapted to the requirements of the fruit industry than any other portion of the undeveloped west.

the purpose of inspecting the placer mines of the camp during the week. The first came in over the new wagon road this week. Mr. Jones says that the placers on the east side of the Pine d'Oreille river are very rich in gold. The gold is of the true California type, which runs in from the Idaho line on the west side of the state. On this creek the bars are high and about eight feet deep. It is a small placier containing about \$4 in coarse, flaky gold, which he took from the sand and gravel of the Sullivan creek which is a part of the gold-bearing stream. The gold is of the true California type, which runs in from the Idaho line on the west side of the state. On this creek the bars are high and about eight feet deep. It is a small placier containing about \$4 in coarse, flaky gold, which he took from the sand and gravel of the Sullivan creek which is a part of the gold-bearing stream.

RICH STRIKE IN MONTANA. Parties from Rock creek report that there is considerable excitement over some recent discoveries made in that section. Rock creek comes into the Helena country from the north east of the city, says a Missoula special to the Helena Independent. Bonita is the nearest town to the Helena country. The placers on the north side of the river. The country has been known to contain gold for many years. Well-known placer mines have been worked on the east side of the river for many years. The present indications are that there will be a rush into the camp this fall.

GOLD FORT OF THE FAYETTE. A Boise mining man, who spent the summer in the Idaho country, has just returned with an interesting account of his trip in the Boise Statesman. He says that parties representing eastern capital are making an examination of placer ground on what is known as the Gold fork of the Fayette. The old C. Poland diggings, which were worked for many years, are now being worked by a party of men. The discovery has attracted attention to the district, which has attracted attention to the district, which has attracted attention to the district.

UNWELCOME GOLD. A queer state of affairs is puzzling Lincoln county farmers, says the Spokane Chronicle. The state of Idaho has been divided into the Columbia are about ready for settlers to file their claims. But from present indications some of the farmers are not so sure. At present a few men and many Chinamen are employed in this way. A little higher up on the banks are the farmers' homes. Some of the richest placer mines have been worked for many years, and have valuable improved farms and extensive orchards, valued at \$150,000 to \$200,000 per acre. The orchards, as a rule, are close to the river banks and in many cases the placer miners are reported to be washing gold under the very shadow of the apple trees. The trouble with the placer miners is that they are not so sure of their "legal subdivisions" is valuable for mining purposes. How the Lincoln county farmers will manage when Chinamen are washing gold on their land is a puzzle. If they could compel the miners to prove up and patent their land, which would set off the placer miners as "legal subdivisions." But this would require \$500 worth of development work on each mining claim, and the miners say they would not gain a real profit by it. It is probable the Interior department will be petitioned to send an agent to make a special survey, and determine the value of the land, which is agricultural land, and run a special survey, thus forming new legal subdivisions. Then the farmers can file their claims.

IDAHO BONANZAS. Perhaps one of the richest gold ledges ever opened up in Idaho is located in the Willow creek district, says the Boise Statesman. It is at present held by D. B. Levan and is valued at \$1,500,000. It is a ledge of gold, which is agricultural land, and run a special survey, thus forming new legal subdivisions. Then the farmers can file their claims.

THE DEMAND FOR MINERS IN THE TELLURIDE DISTRICT. The Colorado mine, Cripple Creek, is turning out a large quantity of gold, some of which is being shipped to the market. The mine is being worked by a party of men. The discovery has attracted attention to the district, which has attracted attention to the district, which has attracted attention to the district.

There are those who think that one dealer can not buy clothing any cheaper than another—that if he produces a suit identically the same, apparently, for less money than another, there must be something wrong with it—it's not as good cloth or it's not made as well or that it's a bait. But

There are those who know that such is not the case, for they know that there are shrewd buyers of clothing who do not rush into the clothing markets when the clothing makers have just produced their new things and ask fancy prices for the first choice, but wait a month or so until the "bloods" are supplied, when they drop in to find the manufacturer willing to make great inducements to take his stock off his hands. Then it is

That those who buy last lay in the same identical goods—the very same linings—the very same buttons—colors just the same—cloth just the same—not a particle of difference—except

The price—and that's so low that he who waits is able to sell his suits for what his "blooded neighbor" paid for his—and he makes nearly as much profit, too. This applies to

Our Five Dollar Sack Suit about which there has been so much talk lately. The "blood" has to sell his for fifteen dollars—because he got the first pick—but we waited a little, and we are paralyzing the natives with it at five dollars—six different shades—single or double breasted—a most elegant suit—say the five or six hundred who are wearing them now. It's no bait, but we have them as long as you come—and will sell you one or a hundred at five dollars.

Our Eight Dollar Clay Worsted—cut, regent cut—was bought after the "first choicers" had been supplied, and the maker was desirous of turning his stock into money. Selling it at eight dollars as we do, we don't lose anything on it—but at the same time we give it to you for ten dollars less than you pay the "blooded dealer" who pays more for the same identical suit than you do.

The M. H. Cook Clothing Co., Successors to Columbia Clothing Co., 13th and Farnam Sts., Omaha.

young people of the neighborhood. The barrels and staves are made of copper shot and the timber cut in the immediate neighborhood. An employee of Bennett's mill, at the head of the Shoshone river, has been killed by a black bear. The man had been hunting for a black bear. The bear had been killed by a black bear. The man had been hunting for a black bear.

W. H. Kearney, who was the original discoverer of the Old Dominion mine, near Colville, ten years ago, and from which he derived a small fortune, has purchased the mine and is now developing the Sugar Loaf mine, near the Mission, in Stevens county. The Sugar Loaf mine is a fine mining gold property and will run 750 to the ton in gold on a four-foot vein.

A United States prisoner, Parker, now incarcerated in the state penitentiary, has lately completed a beautiful cabinet table for Mr. Dicker, the top of which is made of Oregon woods. The diameter of the top is twenty inches, and it is formed of 4,000 pieces. Parker is a fine cabinet worker, and was an inmate of the penitentiary for about ten years. He is aged 68 years, and was sentenced to a two-year term.

A fine vein of coal has been discovered on the Shoshone reservation, near the mouth of the Snake river. The coal is of a high quality, and is being developed by the Shoshone people. The coal is of a high quality, and is being developed by the Shoshone people.

It is reported that Ora Haley is driving a car of cattle from the Snake river to the mouth of the Snake river. The car is a fine one, and is being driven by Ora Haley. The car is a fine one, and is being driven by Ora Haley.

State Fish Commissioner Schaitger will send 50,000 trout to Sheridan, and they will be put in the lakes of the Big Horn mountains. The trout are of a fine quality, and are being sent to Sheridan. The trout are of a fine quality, and are being sent to Sheridan.

Jeff Dunbar, a tough citizen, has the town of Dixon in a state of terror. He claims to own the town, and he is a very powerful man. He claims to own the town, and he is a very powerful man.

The stage line between Rock Springs and Lander has been abandoned. The owners claim it has been operated at a loss from the present time in over \$50,000. The stage line has been abandoned. The owners claim it has been operated at a loss from the present time in over \$50,000.

In 1892 Wyoming had 1,141,472 head of sheep, which were valued at \$2,808,070. Notwithstanding that the number reported at the present time is over 350,000 head more than two years ago, the value is given at \$678,735 less than the smaller number were estimated to be worth.

WASHINGTON. The Northern Pacific car shops at Edison, just reopened, have 1,000 applications for work. The project to build a fine club house for the Tacoma Athletic club has been abandoned for this year. The Seattle contributions to the fund for the relief of the widows and orphans of those killed in the fire at the Franklin mine already exceeds \$15,000.

There are about fifty miners at the Slate Creek mines at the head of the Ruby. One of the miners has been killed by a black bear. The miners are of a fine quality, and are being sent to Sheridan. The miners are of a fine quality, and are being sent to Sheridan.

lands on the reservation. Down toward Lewiston considerable land has been leased from the Indians and is now in grain and one can now see fields of grain that cannot be excelled even in the Palouse country. Charles F. Pettinelli, one of the gold prospectors at Brown's Creek, Minn., has unearthed, he claims, a large lead of gold ore. The prospectors have dug out gold caught in the flume that there must be a lead somewhere, and have diligently searched for it until underneath a layer of black rock the ore was found. The Pettinelli says it will be taken to Minneapolis to be assayed, and that he is positive it is the richest ore ever struck in Minnesota. There is no telling how large the lead is, but it has already been traced 300 feet. The Seth Cook group of gold mines at Coulterville, Mariposa county, Cal., has been sold to a company of Boston and Montana capitalists, for \$100,000. The mine has been idle for twenty years. For several years before his death Cook had not worked them, but he had a large stock of transportation facilities. The purchasers include Thomas Cook, a millionaire of Butte, Mont., and J. A. Coram of Boston, who with his associates is a company of Boston and Montana capitalists, for \$100,000. The mine has been idle for twenty years.
