The condition of our streets, sewers and bublic buildings, more especially the city all and Indian creek, are a disgrace to the city and a constant menace to the health of

the community. The city juli should be thoroughly over-hauled and modernized. This matter was thoroughly gone into in the report of my immediate predecessor, and I wish to en-dorse and reiterate the recommendations made by him. Indian creek should not be used as the repository for the carcasses of all the animais and fowls in its vicinity. The city ordinance governing the depositing of Karbage in this creek should be strictly enforced.

of Farbage in this creek should be strictly enforced. Our methods of garbage collection are not at all sanitary or in accord with the present scientific methods of disposal of the same. No garbage should be collected in the day time or hauled over the principal streets. Open wagons for garbage collection should be positively prohibited, and none used ex-cept those specially constructed for that purpose. It was a common incident last summer to see wagons containing uncov-ered barrels reeking with filth standing on or being driven over our most prominent streets at all hours of the day, dropping their filth and leaving an odorous trail. In answering an inquiry from the president of the garbage collection and disposal or-ganization in New York some weeks since. I was ashamed to be compelled to inform him that we had no systematic methods of collection and disposal of garbage in this city. In the matter of ouarantine and disp.

whether they be physicians or the public in general, should be punished to the full ex-tent of the law. Last winter, owing to the failure to re-port contagious diseases and diregard of the rule prohibiting the holding of public funerals where death has been due to con-tagious diseases, we were threatened with an epidemic of diphtheria, which necessitated the temporary closing of about twenty rooms in the city schools. These rooms were closed from three to ten days and were thoroughly disinfected in the manner prescribed by the Board of Health. In doing this the board met with much op-position from a certain class of citizens, but I am satisfied that had it not been for the prompt measures adopted by the health officers at that time we should have had a serious epidemic.

officers at that time we should have had a serious epidemic. Notwithstanding the vigilance of the board, the death rate from contagious diseases was quite large. From diphtheria and membranous croup, 27; from scarlet fever, 7; from typhold fever, 4. The greatest numbe of deaths in one month from one cause in the last year occurred in the month of July, seventeen deaths from cholera in-fantum being recorded in that month. Had the sanitary condition of our city been what it should have been the death rate from this cause would have been much less.

SHUT OUT SOME INCORPORATORS. Law Recently Passed by the Legisla-

Frank Carmichael of Omaha was just one day late in his effort to file articles of incorporation of a manimoth mining company in this county and get alvantage of the liberal incorporation laws of the great state of Iowa. The state laws have been so liberal in the matter of regulating incorporated companies and the fees have been so modest that parties have been known to come all the way from Denver and other Colorado points for the purpose of having their mighty plans given a paper formation with

points for the purpose of having their mighty plans given a paper formation with the great seal of the state of Iowa on the incorporation papers. But it is different now. The legislature a short time ago pased a law requiring the payment of a \$25 fee for every article of incorporation filed for a company with a capital stock of \$100,000 and an additional ollar for every additional thousand dollars of capital stock. Recorder Shepard was no certain whether the law had gone into effect yet, but he spoke to Mr. Carmichael about it. Carmichael had for filing the articles of incorporation of the Mercur Gold Production company, with a capital stock of \$1,500,000. He left the articles and visited a lawyer and found that the law in question had gone into effect yesterday and that the filing of his articles of incorporation would cost a little matter of \$1,500 He decided that the company would prosper just as well under an incorporation in some other state, and so withdrew his documents representing such a vast amount of capital

City Engineer Has Plans for Deepen ing the Channel Completed.

Present indications are that there will be

small army of men ready to report for work on the Indian creek excavation when the time arrives for beginning work. About half of the time of City Engineer Tostevin is now taken up answering inquiries from men anxious to get a chance to do

a few days work for the city. The work will be commenced on Monday morn-ing at 7 o'clock at the south line of section 10, near the river. The shovelers will then work up the creek a distance of two and one-balf miles. The city engineer and his men have done a productions amount of work within the last a prodigious amount of work within the last few days. The levels have been run and the entire distance from Nineteenth avenue to the end of the proposed excavation has been cross-sectioned into 200-foot sections. Estimates of the amount of earth to be re-

moved have not been completed, but will be before the work is commenced. The plan the engineer will follow is to simply deepen and clear the channel of the creek from Nineteenth avenue. At this point the present flow of the creek is 13.64

feet above the plane of reference, which is the low water mark in the river. A distance of 14,000 feet from this point, which is the limit of the excavation, the level is 6.92. When the channel is deepened this will give a fall of 2.4 feet per mile. At the mouth of the creek there is but little excavation required, only what may be ex-pected to be done at the first good hard spring rain. The greatest excavation will be at the upper end of the work, where a depth of thirty inches of soil will be re-moved. This will only be sufficient to

put the flow line below the bottom of the sewer outlets.

As has been heretofore done the cause of death, as assigned in the certificate re-turned to the city clerk, is used in this report. I cannot too strongly condemn the terms used by some physicians in making out death certificates. General terms such as "dropsy," "heart failure," "jaundice," "childbirth, "change of life," etc., are meaningless and convey no true idea as to the cause of death, and certificates defective in this respect are worthless and should not be accepted by the city clerk. Physicians making such returns are either careless or ignorant and should be called strictly to account. The earth taken out of the bottom and sides of the channel will be thrown along the banks of the creek to form a permanent levee. The work of the same nature that was done several years ago raised a levee from Broadway for a long distance south and was the means of preventing disastrous overflows of the creek in times of flood.
