Marvels of Electrical Equipment in a Modern New York Home.

OPERATION OF A CONVENIENT BUTTON

Revising Exhausted Oil ; Wells\_ Electricity as a Thirf Entcher\_ Confort and Economy of an Electrical Street Sweeper.

The pearest actual approach to the fairty-

land of the fable exists in New York City. It is the home of the president of one of the large exchanges and it is situated on . Went Seventy-fifth street. In this house it GAMES OF THE NATIONAL LEAGUE. is almost impossible to do a stroke of work or perform a series of concerned actions. Everything is done for you, superently by test from the New Yorks. HALTIMORE Aug. 7-Today's game was a onesided and featureless affair. Meekin probably the most ciaborate electrically. current and it is only necessary to reach seem as though the family of the owner must die of lassitude and the servants grow so lary as never to be fit for work in another place. Most of the servants are figure heads any how; they have so little.

> The occupants of the house selform or never walk up stairs. An electric elevator pole-changers and switches which are placed at every floor and are worked by the car itself. Once a certain push button has been prossed the car passes under the control of the person who pressed the button, and no matter how much the other buttons are pressed they will not act until the first one is released. This is done by means of a ommutator which throws all of the other buttons out of circuit; for if two persons a different floors should attempt to work the car at one and the same time it might prove fatal to human life. The car door also is automatic and the car cannot be moved until the door is shut and locked. This elevator is lighted by tiny but bril-liant electric lamps and there is a flexible tube telephone in the car which enables one to speak to any part of the house.

PRESS THE BUTTON.

Such a thing as the ordinary opening and shutting of a door never occurs in this house. Near every door there is a push button. Press this and the door slides into the wall or vice versa. The pressure of an-other button looks or unlocks the door. Sometimes it is not necessary to be near the door in order to open or close it. Hang-ing down beside the beds are what is known in electrical circles as "femible"-bifur-cated cords with wooden backs or handles on the ends. In each handle are four but-tons, marked successively Awake. Shut and Locked. The pressure of the first two buttoms sends a signal to verious parts of the house that the masler or mistress is asleep or swake. The Bedroom is ap proached by a long hall or entryway. Ly ing in hed the occupant of the house cat shut and lock or unlock and open the door nt the end of the fifty-foot passage by merely pressing the proper bottons. Hang ing near the bed is another fiersble carryng buttons, which mean all kives of quali hed summons to the house servants.

There is no such thing as groping in the dark in this house. Every room can be lighted before entering by pressing a but-ton in the hall approaching ft. Further-more, you can at will light up one or a donen or every light in the room, and there is also one switch which enables every lamp in the house to be lighted at once. Durk closets are unknown in the house. The very act of opening a closed foor automatleally turns on the current and the interior is lighted up. All of the table lamps are

and sorthe in the rock near the edges of the biother STICKNEY SCARES THEN ALL LUCKY BABIES ne been to disperse the block at the bottom of the well by torpedore, but this was found expensive. The machine by which it is claimed the dread springs of the deep can be again made to give up their wealth of oil is described as about three feet long and resembling an iron cartringe. It contains chambers packed with carbon, and so con structed as to radiate intense heat in all directions. The rejuveniation of the dry man who has been beggared by the failure of his well and would and millions of barrely of all to the annual production of the . If a sufficient quantity of beat ont be generated and localized by the new inbe generated and nonances of the new in-vention the plan would appear feasible, but it has yet to be proved whether that is pos-sible. The invention is said to be in the hands of a powerful oil monopoly, which is

to test it thoroughly.

ELECTRICITY AS & THIEF-CATCHER. When electrical devices for the detection of their were first proposed for general use is now confident that the investigation will this application of electricity was looked and in the imposition of some large-sized upon as more of a joke than anything else. EDectrical thief-catchers, as a matter of fact. There has been a strong pressure under the A Diet Accurately Fitted to Their have turned out to be much more reliable in their operation than their human prototypes, and they are now extensively emdummy putside the cheap clother's store. Chicago & Great Western railroad took the is found to be nater when the lock and chain by which the wooden figure is secured, are superseded by an electrical attachment which instantly gives notice of the slightest distribution of the material over which its mute custody is exercised. Whitedhapel, charged his fellow railroad men with in-London, has anything but a surver routa-tion, and a shoemaker on us principal street has long been purried how to save the show goods hung outside his store from the depredations of the numble-fingered nutives. In because he refused to pool his trade with them. carries them from foor to floor, and even up to the private roof garoen filted out with electrical devices. No strendant is required to work this elevator. It is the preferition of automatic action. A single host are pressure of the button will call it to you. This is of course, possible because of the automatic action of the pole-changers and switches which are placed man rushed out just in time to prevent the jet me consult with my attorney. I say that heartily and completely, booty being carried off by the thief, who was at an 1 given into the hands of the police. The sims boxes at the Roman Catholic church at Polkestone are all equipped with tric slarm bells. Their contents, which formerly were often tampered with, are now as safe as if they were locked in an iron chest. Recently, a man who thought would be the emplest thing in the world to "tap" one of the simple-looking boxes tried

> order, and the thief was murched away to jail, where, after trial, he stayed two months. ELECTRICAL STREET SWEEPING.

to do so. An electrical impulse along the

wire brought up the watchman in quick

Elise TRUCKL STREAM SWIDER working self-basing car it is contended that New York City could be saved \$1,000,000 a year in the matter of cleaning, besides having the work done more perfectly, more quickly and with less annoyance to the community. The new self-loading car works by electricity warded to Washington. Mr. Slickney was then permitted to leave mous the stand. The railroad men got the worst during

In appearance the car, as described by the New York Herald, is a combination of the ordinary trolley and railway freight car. the operators being seen at the front and rear, much the same as a motorman and conductor of a street rallway. And so perout is the unseen machinery of this car that these men seem to have very little to do, even when the sweeping and carrying away of dirt is being done.

The inventor of this labor saving device is A. Jackson Reynolds, a Massachusetts is A. Jackson Reynolds, a Ministernusters Yankee by birth, but now a resident of Mon-trual. Can. The invention was tried and found successful before announced. It is constructed to be operated much the same constructed to be operated much the same truther car, being run on an electric divert any traffic from one road to another as a trolley car, being run on an electric line where it exists, but being also fitted with the purper motor, so is to run on any racks. The idea is to sweep the street from a lecture, which statement elicited a laugh surb to curb inwardly toward the tracks. then when the self-loading cur passes over the tracks at any desired speed it takes up the refuse and conveys it to any desired io-

On Prelier, a resident of the Equinaide ear Eleventh and Mason streets, was

swindled out of E yesterday by a method which hears the stamp of some little orig-mailty. Thursday afternoon he was visited by a very mathy dressed men and woman, who stated they were looking for a house. Freisr is accurt for several houses in the which completele majuvated them one which completele majuvated them of first aight. A hergals was quickly happend upon by which the situations were to take possession of the place by the parting of 10, the first month's rent, is advance. The stranger had nothing but a poset for 127. Would Mr. Prelies take this? Ears, he would which he did, paying over the differ-ione to the may situation. The paper vas signed by a security tame and in her vas signed by a security to be been in the stranger.

marble statutes holding incandescent lamps -small patterns, as it were, of Edison's famous statue of the Triumph of Electric One of them, which stands in the

World's fair. The roof of the house with its electrically lighted garden presents a beautiful sight from a distance, just as the distance is beau-tiful when viewed from the roof, for the Palinades lie off to one side with the Hudson in between. Here the family spends its evenings when home in the summer time. In the kitchen all the cooking is done by the current and so much of it is done ac cording to new methods that the cook would be practically useless in an old-fushioned kitchen. When a chicken has been prepared and placed in an electric oven it is only necessary to press a button and watch the clock. As the heat is obtained from overcharged wires it is distributed evenly all around the bird. Basting is, therefore, not becomes a more question of time allowance A leg of lamb, for instance, will require

point. just one hour and ten minutes to cook. Left in the oven three minutes longer than this and it would be overdone. It is not neces-

sary to look at it in the meantime. ARRANGEMENT OF LIGHTS.

The dining room of the house is exquisite in tone, the lights shedding a gentle radi more down from the ceiling. It is said that the owner even contemplated an electric table which would sink out of sight and its place be taken by another after each course had been eaten much after the Roman fashion of table removal. The nearest approach in this case, however, is an ele dumb-waiter, large enough to carry a whole dinner course. It is but one remove from the other ides. The dining table abounds in call bells. The master of the house can even give a private signal through the floor

his own plant. Storage batteries supply the current to the house. The cells themselves are stored by a dynamo which is worked in its turn by a gas engine. This worked automatically by a side current from the cells. A colored man-servant keeps a supervising eye over the machinery and an experienced electrical man pays the house a visit at intervals admone months. This in a measure proves the feasibility of electric lighting for country real

GEDCER. in fact, everything seems to be done at a ich of a button in this house and inhabitants have become therosichly used to

it. The owner has tried as enjoy some of the delights of ordinary agrigity by becoming a photograph fiend, but here the modern destiny of the mansion has pursued him and heard the argument upon a motion to con-tinue a preliminary injunction obtained on contrating lamps enable the parter to take pictures day and night and these are electric developing processes on which be experi-ments. He has even had water run underground from his cellar plant to the houses of his business partners and for his father in-law on the next street. Mersonadies them with lighting current. It is not expansed that there are any electric hair curiers or electric cigar lighters in the house. there is no reason why they should not have been conceased in some out of the way cor ner. In short if there is a genil of domestic

electricity stalking abroad it would probably select this house for its city residence. REVIVING EXHAUSTED OIL WELLS.

A acheme is on font to restore the proinstitutions of exhausted all wells by eler trivity. It is proposed to hower an electric beater into the well, turn on the current and by the heat generated melt out the refuse matter which is clugging the porer of the stone and thus allow the fresh ward flow of o'l. It may be explained the generally accepted idea in regard the giving out of all wells is not that the supply of all in the well is necessarily diinthished, but that the first is increased by the atoppting up of the call. The state through which the oil gumes is of a very particle reduce, and as the liquid is in a

above the wheels and axles, so as not to

impede the action of the dust brushes. Three large rotary brushes, placed across

s that it can be run backward as well as forward, without any change of machinery, even without touching it, the car being reversed by the simple pressure of a lever. The brunches make five revolutions to each one made by the car wheel, this high brush speed forming a powerful suction, which takes up all refuse matter and deposits it into the body of the car, which has a oading capacity equal to fifty carts. There is retained upon a floor which works on pivot, and which with a single turn instantly deposits the dirt at any necessary point. In cases where the old-time sweeper is not cared to be used for the cleaning of the surfaces beyond the car tracks, the brooms of the loading car may be extended South Dalcota Railroad Ass so as to take in the whole street. far the car has only been spoken of

The cost of operating the electric sweeper is estimated at \$3 a mile when it is only used to sweep and load the collected matter between the car tracks.

to lose any of them. Be ready for the green apple senson by having DeWitt's Colic and Tholers Orus in the house.

lows Development company, a corporation organized under the laws of lows for the purpose of dealing in land, the stock of born June 2, 1894, and baby Vera, born May Three large rounty brushes, placed across the center of the car, do the sweeping and loading, working on much the same prin-ciple as a carpet sweeper, and are covered with meel casings, which have proper out-lets for discharging the sweepings into the body of the car. A peculiarity of the car and its great ad-vantage over other sweepers of the past to the in the prejudice of activity for the the market at Kansas City in the prejudice of everybody else. for the purpose of securing grain business for his railroad, it being understood that the Lowa develop-ment company would lose money. If this is not a device for cutting rates, if and were so well pleased with the result this is not an unjust discrimation as between that we kept on using it. shippers, and if this is not a violation nurse the younger baby, but had not enough milk, and as she did not thrive on the milk, we gave her included food, which the interstate commerce law and of his agreements with other railroads to maintain rates and of all other business principles, it is nothing. It is very discouraging for agreed with her perfectly."

"The ad-

other rallroad men to think that such things can occur in the face of a declaration on the part of Mr. Stickney that he has been maintaining rates and in every way con-ducting the Chicago & Great Western rallroad in an honorable manner. What we need among the railroads is more and less trickery and the sooner we can get

South Dallots Railroad Assessments. HURON, S. D., Aug. 7.-(Special)-The

1896 assessment upon railroads operating as one for summer use, but it can be oper-ated in the winter just as successfully in re-board of assessment at Pierre, and is lower ated in the winter just as successfully in re-moving the show. The car, running at the than that of last year. In 1895 the tex rate of nine miles an hour, can take up the snow as fast as it falls, no matter how heavy the fall may be. Two such sweepers Northwestern for that year was ten and on any street, it is argued by the inventor, ninety-one hundredths per cent of its gross would keep tracks and rondway clear so carnings. Although a strong plea wus made for a reduction of railroad ALSO CONTRACTORS generally in the same ratio that other assessments have been reduced, the board would not materially change the aggregate, but contented themselves with equalizing the researcents between the roads. It WAS

shown that the assessment of the North-western railway was out of proportion with the assessment of other roads, it being much higher. Under the equalization the North-western secured a reduction of \$127,000

while the assessment of the B. & M. and the Milwaukee was raised. New York Gets in Line. NEW YORK, Aug. 7 .-- Gold standard
