

ESTABLISHED JUNE 19, 1871.

OMAHA, SUNDAY MORNING, SEPTEMBER 20, 1896—TWENTY PAGES.

SINGLE COPY FIVE CENTS.

GREATEST SACRIFICE OF HIGH GRADE NEW FALL DRY GOODS EVER KNOWN.

\$30,000 CARPETS, MILINERY, RESS GOODS, COFFERTS,

Blankets, Carpets, Underwear, Gloves, Hosiery, Boys' Clothing, all ordered by HILTON, HUGHES & CO., NEW YORK, SUCCESSORS TO A. T. STEWART

BUT NOT DELIVERED ON ACCOUNT OF THEIR FAILURE AND ON SALE TOMORROW AT

WOOL CHALLIES 50c OUR PRICE TOMORROW 5c

ROSTON 16th and Douglas, OMAHA.

16th and Douglas, OMAHA.

200 ROLLS OF FINE CARPETS

50 CASES FINE Blankets and Comforts

100 Doz. Samples LADIES' NECKWEAR 50c

SPECIAL BARGAINS SILKS 30 pieces 22-inch, strictly all silk

Black Dress Goods. 225 pieces of black Jacquards, Brocaded Mottos, Ottoman Brocades, Crepe Cloth and 50 other varieties in black goods, many of them interwoven with silk, actually worth \$1.00 a yard, on special sale for Monday only at 25c a yard

MOJST STYLISH CLOAKS First in the field, first in variety of styles, first in the littleness of price quotations, we submit these to Monday's discriminating buyers.

UNDERWEAR 1000 infants' and children's derby ribbed and heavy cotton fleeces lined underwear, go at, each...

At 49c Best all wool Ingrain Carpet, An endless variety to select from.

500 pairs full size, heavy heavy gray or tan, All Wool Blankets, \$1.98 pair. These goods are actually worth \$3.50 pair.

SPECIAL BARGAINS IN OUR BASEMENT. 32 inch Sateen, 15c quality...

25 pieces of changeable two-toned Pure Silk Taffetas, a great assortment of new combinations, worth 75c, on sale at

Colored Dress Goods. All the 39c and 50c Dress Goods that were ordered out for Hilton, Hughes & Co., which we bought, on sale in our Dress Goods Department at 25c a yard

Double English Kersey Capes, 23 inches long, 120-inch sweep, high storm collar, both capes and collar trimmed with two-inch band of same cloth, finished with 12 rows of silk stitching, black only, price...

Men's heavy wool natural gray and camel's hair and fleeced lined Underwear. Also fancy scarlet and gold mixed Underwear.

At 75c We are showing a beautiful line of Sanford's best Velvet Carpets, will cost you anywhere \$1.00 yard

250 pairs of elegant white California Blankets, these are a thick, soft, heavy, fleecy all wool blanket that would be cheap at \$5.00

Dark outing flannel, 12 1/2c quality...

\$2.00 quality of 24-inch heavy black Gros Grain Silk, on sale at 85c a yard, only one dress pattern to a customer.

100 pieces of 75c Dress Goods, in Scotch checks, new chevrons, silk and wool plaids, in a choice assortment of the new color combinations, Hilton, Hughes & Co.'s price was to have been 75c a yard, on sale at 42c a yard

Double English Kersey Capes, 23 inches long, 120-inch sweep, high storm collar, both capes and collar trimmed with two-inch band of same cloth, finished with 12 rows of silk stitching, black only, price...

The grandest bargain we have ever offered. Two cases of heavy lamb's wool fancy colored men's underwear.

At 98c Yard. All the very finest Axminster and Gobelin Carpets, the handsomest line of goods ever shown in Omaha, and not one in the lot worth less than \$1.50 yard.

100 bales of extra size Comforts, made of fine French Satine and filled with pure white cotton, worth up to \$3.00 each. Your choice for \$1.69

50c plain and fancy all wool ciderdowns 25c

ELECTRICITY ON THE FARM

Growing Use of the Great Power in the Domain of Agriculture.

NOVATIONS IN MODERN FARMING

The Tools Ready for the Current—Supplying the Power—Forcing Plant Growth by Electricity.

(Copyright, 1896, by the R. S. McClure Co.)

It is a fact, openly commented upon by the patent office officials in Washington, that much of the attention of inventors of late has been turned to the adaptation of electricity to farming. The field is a broad one and judging the probable advance on this line by what has been done on other lines it enables us to catch a fleeting glimpse of the electrical farm. The number of electrical farming patents applied for during the last year shows that an electrical farm, pure and simple, may be possessed by any one in a position to gather the scattered devices together and put them in operation on one plantation.

Several electrical farms exist at the present time, but they are merely instances of special application; the broader application remains to be accomplished. There is, however, no reason why we should not possess a comprehensive electric farm at once. Not only have we a host of mechanical devices such as electric plows, harrows and other soil disturbers, but the fact that the current can be used in lieu of the regulation forcing frame is a possibility in itself of vast importance. Nearly every department of the farm has suggested an idea to the electrical

A CURRENT MOTOR.

inventor. The fact that the transportation of garden produce to market by trolley cars has been the means of disposing of otherwise unsalable stuff, is an argument of long range, but a forcible one for all that. The possibilities ahead of long distance transmission, the procuring of power from artesian wells, the electrical utilization of wind mills and the now possible method of using the currents or tides of rivers, are all arguments for the despairing ones who can see no way of procuring electric power at first hand.

THE PRINCIPAL OBSTACLE. The procuring of power is after all the principal obstacle in the way of electric farming. Remove it and all the minor applications are easy enough. There are several methods of obtaining this power within easy reach of every husbandman. The physical means of the country will, generally speaking, decide the method to be used in each locality. Long distance

transmission of power as pursued now in several mining and lighting plants in the United States is the most feasible method of obtaining an electric current at some spot where coal is easily procurable and the current is sent across country by wire in all directions or water wheels which in their turn operate dynamos from which a current is sent through a transmission line to any distant point. As currents have already been sent 100 miles we can anticipate the spectacle of the future by supposing an immense power plant to exist in the center of a farming community, supplying currents for every purpose within a radius of this length. Under such a system a whole state could be supplied with current from a half dozen plants, another element of compensation to be found here is the electric lighting of country highways and the artesian well being on the scale. At Engoubaud, France, less than thirty horse power is transmitted from a water-turbine to a distant farm for the purpose of operating an electric plow. The latter is drawn back and forth across the field by cables. Several electrical farms exist at the present time, but they are merely instances of special application; the broader application remains to be accomplished. There is, however, no reason why we should not possess a comprehensive electric farm at once.

utilize the excess or lost power of the well for operating a creamery, a project right in the line of electric farming. There is no reason why this current should not be transmitted across country to any distant farm and so be made to operate at long range. It is indeed a wonderful well that can supply a city with water, electric light, heat, power and swell a nearby creek until it has become a very respectable river, with a current sufficient to operate all the sewage of the place. Why could not wells of this kind, more limited in power perhaps, but as effective up to a certain point, be created in many parts of the United States and electric farming be practiced on a large scale?

There are one million windmills in operation in this country at the present time. Every one of these mills can be adapted to the generation of electric power for farm purposes. According to estimates, windmills are sold at the rate of one hundred thousand a year. Many of these are exported to the United States and are being used in the United States. Here is another local means of obtaining current. It is already being obtained in various parts of the country. Prof. Bailey's arc lighting fame, lights his residence near
