COTTON CROP WILL BE ENORMOUS.

H. M. Neill Estimates it at Nine and Three-Quarter Millions.

NEW ORLEANS, Aug. 15.-H, M. Neill the well known cotton statistician, has isued a circular on the growing crop. After referring to the correctness of his esti-mate made in July, 1894, of the crop of that season, Mr. Neill says: "At this mo-ment for this year the promise is equal to any previous year in every state but Texas, and on the present acronge, even allowing that Texas should full short of her maximum product per acre by 1.000,000 hales, the outlock now is for a crop of at least 9.750.000 bales, with 500,000 to 1.000,000 more within the range of possibilities. This ignre of 9.750,000 bales is really very con-servative for a product per acre outside of Texas equal to 1894-55 would give 7.550,000 bales, and a maximum for Texas would be 2.956,000 bales, from which, allowing 1.000-500 off, you would have a crop of 10,300,000 bales. The crop is so far advanced from recent rains and beat that it will reach maturity and be independent of frost at an unusually early date and should we soon have good rains in Texas her crop would also be near perfection, and the possibilities for the total crop would then be something enormous." that season, Mr. Neill says: "At this mo
