

worked the newspapers for copious notices, accomplishing soing forward. It seems that there is some merit in the chainess wheel with illustrations neatly wedged in. Yet with illustrations neatly wedged in the which others besides the manufacturers have discovered. there is little that is new or startling in the event, except the price-\$125.

The new wheel is operated by beveled gear-a principle as old as mechanics. In general appearance it is not unlike the regulation safety, except that the absence of the chain is plainly noticeable. The gear casing in front looks like a small, solid sprocket without teeth. The shaft connect- if you have the price of a tandem; that's my ward set meshing into the cogs of the front sprocket and the rear set into those of the smell sprocket attached to the rear hub. The cogs on the bar are set at right angles with it and those on the sprockets are on the side, and not the edge, as in the chain whitel. In this way the power applied to the pedals is transferred to the rear wheel, and, it is claimed with much less friction than by the chain method. All the mechanism is enclosed in dust and waterproof cases. The wheel weighs 26 pounds.

The inventors who have striven for years—literally hundreds of strivers—to make a perfect chainless bicycle were actuated by the imperfections of the chain and sprocket. Not only is the old system subject to the interference of dust and dirt, but the joints of the chain provide a multitude of places subject to wear, and this wear alters the "plich." "Pitch" is a mechanical term which indicates the distance from center to center. If the wear of the chain alters the distance from center to center of each joint the wear of the sprocket teeth must be identically the some to produce unison in the The inventors who have striven for yearsdistance from center to center of each joint the wear of the sprocket teeth must be identically the some to produce unison in the transmission of the power. But it is impossible for the wear to be the same, hence the infinitesimal changes in the pitch of the chain and the citch of the sprocket teeth cause a loss of power, and this is why the rider, who doesn't bother about what pitch means woonders why his wheel rides harder.

rider, who doesn't bother about what pitch means, wonders why his wheel rides harder after it is old than when it was new. The chainless gear also offe ed the mast ambitious hopes for better hill climbing.

The fallure of many and most of the labors of these tileless inventors was due to the imperfection of the beveled toothing. Thus, while all kinds of machinery are driven by beveled gear, the weight of the eog wheels provides a solid base of resistance that overcomes the imperfections in the perfect fitting of one cog into another; whereas, the lighter bleycle mechanism depends upon, not weight, but absolute cerfection of the parts. The rod transmitting the power from the pedals to the rear axie, if out of alignment, due to the instability of the light bicycle frame, would wreck the machine, and it would stop like grandfather's clock, that never went again. wreck the machine, and it would stop like grandfather's clock, that never went again.

That's where the bicycle combine came in.

For two years beveled gear patents have been brought up right and left. The patents of the League chainless wheel that failed were bought, until they believe they possess every possible patent which cove a any kind of perfect or inverted to the party ward with a rope. The animal after receiving the rope over his horns turned suddenly and charged in the opposite direction. Rider and wheel went down in the dust. The lariat had been attached to the handlebars, as it would have been made fast to the saddle on a horse, and while the owner saved himself from further embarrassment and inof perfect or imperfect bevel geared wheel.

The work of obscure inventors was combined, made into composite shape and tried and tested; one failure brought about another experiment, until, from fallure to failure, a simple contrivance was born which owner recovered the fragments one by one

It is stated that at least twelve factories will make and market wheels made on this model, under license from the Hartford firm which is said to control the patents. How many patents are thus controlled is not known, nor is it material. A practical monopoly of the principle is not possible because bevel gearing is long past patent age. Modern Machinery stated in a recent issue that the only substantial patent secured by the Hartford people was on a machine for cutting the gear. There must be other patents of some value, however, for the claim is made that the firm, in order to block all avenues of competition, paid \$50,000 in two years for various patents relating to bevel gear. But as the main principle is free to all, there will be some rivalry, some lawsults and a smashing of prices before that \$500,000 is cleaned up. It is inevitable. With high grade chain wheels a drug in the market, and various chainless wheels of high and low degree turned out by makers outside the p.ol, it is not likely that the so-called "combine" wheels will find many purchasers at \$125 when the novelty has worn off. The history of wheel prices during the past two years will be repeated.

believe to be perfect.

Speaking of its chainless wheels for 1898. an English firm says it is the latest and highest form of bicycle development. It marks the utmost possibility of excellence and completeness under present conditions under any conditions that are likely to arise. Some of its points of superiority over a chain-driven wheel, it says, are:
"It will go faster and further with less

effort. It is much easier to keep clean. Every motion is positive—no back lash. It has no links or teeth to 'catch things.' Its driving mechanism is always thoroughly lubricated. Its motive parts are not affected by the weather-by rain, mud or dust. Its bevel gears actually improve with use, while a chain deteriorates from the first. It saves repair money, work and worry, and in-creases the safety and delight of cycling. It removes the one serious source of danger—that every bloycler realizes, and substitutes confidence for dread. The weak part of a chain-and-sprocket bloycle is the chain. The bevel gears of the chainless wheel will out-last any other important part of the ma-Time alone will demonstrate the truthfulness of these advance claims. two or three cogs can withstand the driving pressure which strains a chain covering two-thirds of front and rear sprockets, then will the beveled gear wheel be set down as a mechanical triumph. One of the new models has been in experimental use during the summer in the cast. It is claimed for it that it was ridden 7,000 miles and stood every test placed upon it, proving to run easier at the finish than at the start. Tests with instruments as to the friction in the new gear are also said to have been made demonstrating that the bevel gear is easier running than the chain.

Ex-Champion Zimmerman has given the chainless a trial and declares in the New York World that it is not a better wheel than present chain models. "I would not ride it in a race," he says, "because I could not win on a chainless wheel." He advances some reasons in support of his opinion that it is not a support of the property of the same transfer. is not a superior bicycle. These reasons are briefly, that the new model is heavier, has more friction, inasmuch as it has two more sets of ball bearings; is of necessity extremely rigid, more complicated, which renders it difficult to overhaul; and finally that the gearing is adjusted to one-thousandth of an inch, so that the slightest variation

wheels are abroad in the land and the pedaling multitude are gazing with becoming awe on the samples shown. The samples come from Hartford, Conn., and their arrival in each city excites as much interest as a circus. The advance agent of the manufacturers is a "lulu" in his line and he has worked the newspapers for copious notices.

A fad has invaded the Toledo, O., wheelng fraternity. Of course, the women started t. Briefly, it is a code of bicycle bell flirtaon signals, by which a wheelwoman can colare the state of her heart to male riders if they understand the code.

One short ring-You impress me favorably. Let us 'dig 'em up' together through life. Two sharp rings-I believe I could love you long suit. One faint, despairing ring—Why are you

rather swift, wear knickers and can scorch a few; the man who wins me must out Four tinkles-If you would win me, raise the mortgage on my wheel.
Forty rings (count 'em forty)-This

equivalent to the popular call of "Ice!" which, interpreted by the love-signal code, means "You're not so many." There are other signals in the code, but if a young man studies the above carefully he can manage to understand his girl friends tolerably well.

went after the steer and brought him in So ended the attempt to make the wheel a practical adjunct to range riding. But its introduction into pastoral walks was attended with more success, and its future in that line will be watched with interest all over

the land.

The bicycle riding sheep herder of Meagher county affects a Buffalo Bill style of hair dressing and wears Van Dyke whiskers. He is said to present an aspect never to be for gotten as he rides to and from his work.

SHORT SPURTS.

Whisperings of the Wheel. It was announced some weeks ago that the Associated Cycling clubs of Omaha would

take an active part in this fall's election and that candidates who would pledge themselves to work for good roads and clean streets would receive the wheelmen's support, and incidentally, their vote. This an. for improvements made by him enhancing the nouncement was made after one of the regular meetings of the club, but it seems that little interest has been taken in the matter was not to protect or preserve the property, will play in the election will be decidedly a minor one. This only goes to show the lack of interest, organization or whatever ders it difficult to overhaul; and finally that the gening is adjusted to one-thousandth of an inch, so that the slightest variation from any cause is liable to smash the coss, "it may be a success," coucludes Zim, "but that remains to be demonstration has been made I am going to ride the chain-and-sproket wheel."

There are other racers besides Zimmerman, and they have found some merit in the chainless wheel as a goer. The feat of Frank Stabuck in winning from Jimmy Michael on a chainless affair has been a great boost to the wheel in this country. The chainless wheel has already be eaten some world's records Huret, the French some world's records from 100 miles of wheelmen at regular periods.

The general from the state of the was also baged by the hunter, the country. The chainless wheel as a success." coucludes Zim, whit was also baged by the hunter, the claims of the other against the dog in the country. Head against the dog in the country. during the year, engage good speakers to address the meetings and in this way work up interest and enthusiasm among the wheel-men, they would accomplish their end sooner or later and become the factor in politics that wheelmen are in Chicago and other eastern

Floyd McCall has abandoned his proposed southern trip and will remain in this city during the winter. With Sager, the Denver rider, McCall hopes to lower some world's unpaced tandem records at Charles Street park during the coming month, providing the weather will permit, after which he will go out of training for the season.

Frank J. Mittiuer, one of Omaha's old-ime wheelmen and racing men, has been in the city during the past week shaking hands with his old friends and club mates. Mr. Mittauer is now in the Pullman service, occupying the position of a conductor, and was on his way to Oklahoma, where he goes to assist in opening up a new line.

Secretary Pease of the Nebraska division League of American Wheelmen, will mail ballots for the election of league officers for ballots for the election of league officers for the ensuing year to each member of the di-vision on Monday morning. The ballots must be returned before November 15, when they will be counted and the result of the election announced. As there is only one candidate for chief consul, D. J. O'Brien, Omaha is sure of having the head official located here

been proven time and again,

There was a large crowd of wheelmen and their temale friends present and a most enjoyable time was had. The Turners are noted for their hospitality and any wheel their parties will miss a rare treat by not

The traveling representative of one of the in the city during the past week exhibiting the new chainless bloycle. Many local wheel-men were invited to try the machine, and all who accepted the representative's invita-tion seemed to think it far superior to the chain wheel in running qualities. George Isaacs remarked, "an awful fine ar-Meierstein, one of the local racing men, gave rangement for these hard times." You'd It a trial and had the following to say in like to have some one double your dol-regard to it from a racing standpoint: "I lars for you? Well, we assure you we took a long ride upon the machine and gave the what I considered a good test. It seems it what I considered a good test. It seems to run much easier than the chain wheel after one gets it started. I hardly think it would make a suitable racing machine to The races of today are all finished with a jump from the last quarter, and I am afraid that the chainless wheel would get lost in the sprint unless they improve them so that they will star easier and could be a second or they will star easier and could be a second or they will star easier and could be a second or they will star easier and could be a second or they will star easier and could be a second or they will star easier and could be a second or they will star easier and could be a second or they will star easier and could be a second or they will star easier and could be a second or they will star easier and so when they will star easier and so well as they are all finished with a jump from the last quarter, and I am afraid that the chainless when a second or they are all finished with a jump from the last quarter, and I am afraid that the chainless wheel would get lost in the sprint unless they are all finished with a jump from the last quarter, and I am afraid that the chainless wheel would get lost in the sprint unless they improve them so that hey will start easier and quicker."

Sunday last was an ideal day for cycling and hundreds of wheelmen and women took spins out to the exposition grounds in the afternoon, while many made the run over the yele path to Florence. The path wis not li-he best of condition, being badly cut up is places where teams had crossed it. Wha the wheelmen should endeavor to do now is to raise money enough to put a surface of cinders upon it, which would cost but little and make it rideable in all kinds of weather
