Pulse of Western Progress.

for the beet sugar industry, the production of an article not exactly kindred to sugar ets, yet commonly found in soils favor able to the growth of the latter, has been brought to the public attention. This article is chicory, says the Oregonian. "If Oregon can grow sugar beets, it can produce chicory also," is the verdict of experienced men. nd only last week a representative of the largest chicory manufacturing concern in the world was making inquiries of the prospects for establishing a factory in the northwest. The unsavory reputation of chicory among consumers of coffee has probably obscured e real worth of the plant. The fact that the United States imported 14,650,000 pounds of chicory during the first seven months of lishments in the east and there is an im-the present fiscal year will give some idea mense demand for it. the present fiscal year will give some idea of the local market for this article and enable farmers to draw a conclusion as to the inducements chicory production offers. From three-fourths to seven-eighths of this importation comes from Germany and Belgium, being raised in the beet sugar districts. Occasionally samples of Oregon chicory have been noticed, but no particular attention has been given the subject. Last week Mr. Michaelis, representing the firm of Heinsich, Franck & Soehne of Germany, while in Portland, was shown by Mr. Devers some chicory grown near Alpha, Wash. The quality of the chicory impressed Mr. Michaelis as being good, and he made many inquiries concerning its growth in the state. inquiries concerning its growth in the state. Later he told Mr. Devers that he had instructions from his firm to look for a good location for a history structions from his firm to look for a good location for a chicory factory, and he was making tests to ascertain what districts of the west were most suitable. His concern has ten different chicory factories in Germany, and factories also in France, Belgium, Roumania, Italy, England, and in recent years erected a factory at Flushing, N. Y. Mr. Michaelis said the factory his company proposed building in the west would mean the employment of 500 men in the manufacturing and drying processes, besides the sum that would be expended among farmers for the employment of 500 men in the manufacturing and drying processes, besides the sum that would be expended among farmers for the raw root. Mr. Devers feels much interested in this new industry. "Under the Wilson bill," said he, "a duty was put on the finished product to encourage the manufacture of chicory, and the dried root was allowed to come in free. The Dingley bill, however, to help the farmer, puts a duty on the root, which has given a great impetus to the production of chicory in the United States. It is now being successfully grown in Nebraska, and I feel that we certainly ought to produce it here if it is a success there. I have collected several samples of domestic chierry root, which I sent to the management of the factory at Flushing. It seems to me that there is the possibility of Inaugurating a new industry here which is of sufficient importance to enlist the careful attention of the people of our community." The industry in Nebraska is assuming goodly proportions since the enauthern of the The industry in Nebraska is assuming goodly proportions since the enactment of the Dingley tariff. Growth of the plant was commenced there over five years ago, and with the first cover in the property of the plant was commenced there over five years ago, and the first crop a small factory was estabwith the first crop a small factory was estab-lished at O'Neill, Holt county. In 1895 the American Chicory company was organized to succeed the German Chicory company. The manufacturing and drying plants were callarged and increased, and last year the company contracted for 1.200 acres, that being the first year of general operations in the state. The farmers were paid \$7.50 a ton for the roots, and the estimate is made that an average yield per acre is six tons. Great interest is shown by Nebraska farmers in the new industry, as it seems to be even more now industry, as it seems to be even more certain of returns than beet sugar. PACIFIC COAST POTATOES.

The low prices of last fall and winter which attended the full crop of 1896 did not tend to stimulate sesding. Yet potatees form such a staple in almost every state that, after all, a fairly full acreage was put in does wheat. Of late years about 30,000,000 acres on the average have been officially reported as being devoted to potatoes yearly throughout the world, of which Europe, including the United Kingdom has about 26, 000,000 acres and the United States about 3,000,000. The full crops in Oregon and Washington this year and the shortage elseput their potatoes on the market at such a profit as is impossible under present transportation conditions. This is only a special instance. A similar need is feit in almost every other department of Pacific coast in-

GILSONITE FOR SHIP PROTECTION. The discovery that glisopite, which has been found on the Indian lands in Utah, will protect a ship's bottom from seaweed and Press, is likely to end the attempts of speculators to induce the government to open these lands to entry. If the government owns the only glisonite deposit known it will hardly consent to make it an article of commerce available for use to foreign navies. A monopoly will enable our war vessels to keep the sea indefinitely, while foreign ships are obliged to seek port at short intervals to be scraped and cleaned. It would be worth millions of dollars to this country in a war trip, only makes fourteen or fifteen, because painted with gilsonite, twenty knots could be run, if the stories about the new asphaltum | present plans of the water committees. docked in years, always providing that no accident should intervene. The probability that plies could be protected from the teredo that plies could be protected from the teredo THE DAKOTAS. by this new substance is not great, but it would bear looking into. At present, however, the chief advantage of its use is naval, and this is enough to warrant the govern-ment in guarding it with jealous care. In-ventions may be copied, naval plans stolen and engines and ships duplicated; but, if we have all the gilsonite there is, and that or danger point. government land, we can keep it for our WYOMING NICKEL MINES.

Great interest is being taken throughout northern Wyoming in the operations on Piney creek, near Sheridan, of the Nickel Refining company. On Monday last the com-pany received a carload of fine mining machinery which is being freighted to the mines and will be put in operation at once.

pressor, dynamos, etc. Mr. G. Farmer Hines on the "Dark and Bright to carry water to run the dynamos, which will generate electricity to operate the mining machinery. The Nickel Refining company is composed of wealthy eastern men, who have had experts examine the ore which was so nearly matured and dry this early to be in excess of \$100,000. the have had experts examine the ere which being mined and have had mill tests made which have demonstrated its value beyond loubt. Nickel is found in the ore, but not n sufficient quantity to justify the erection of a large plant. It is believed, however, that as the vein is gone down on this ore will increase in value and if this theory proves to be correct a large establishment will be put up at the mines. The product of the mine is used in nickel-plating estab-

MICA AT CRIPPLE CREEK.

For the second time what seems to be a mica mine has been opened up in the Crip-ple Creek district, says the Cripple Creek Henrid. October 1 Whalen & Ash opened a yein of mica at only a foot below the sur-face. At this point it heasured a foot in vein of mica at only a foot below the surface. At this point it hieasured a foot in thickness. Its permanence, of course cannot yet be determined. The vein was found on the placer in West Cripple Creek at the foot of Signal hill. A few years ago a mica mine was opened up on Mt. Pisgah and paid well for a short time. After a few mouths, however, the mica was encountered in quantitities too small to be used for commercial full of the control of the central office and is alleged to have struck farred twice with a cane, after which higher a pistol on the manager. He will be nurposes and work was discontinued on the purposes and work was discontinued on the property. Mica has been found in abundance on almost every claim between Cripple Creek and the Bare hills, but with the exception of the one at Mt. Pisgah mire and ably ha Creek and the Bare hills, but with the exception of the one at Mt. Pisgah mire and possibly the discovery made by Whalen & Ash, it has always been too badly broken up to have value. Mica schist has been found in connection with elmost every formation encountered in the district, but, of course, is without value.

ARIZONA'S BIG COPPER PLANT.

The city council of Grand Forks will probably have considerable controversy over a public electric light plant before the city cans enjoy that luxury, although there is not a citizen but is in favor of the city using electricity for lighting purposes. The present company has made a proposition to light the city for \$125 per light. An expert claims that the city can maintain the lights at \$79.20 each. Mayor Dinne is enthusi-ARIZONA'S BIG COPPER PLANT.

in running operation the largest as well as an injunction form a part of the proceed-most successful copper plant in the world. The company is a Scotch concern, all of the directors living in that country. Sixteen years ago copper ore was found there and developed by the Mexicans and brought by them into El Paso, Tex., on burros. The tailings are used up now by the magnificent new smelter and pan out wonderfully well. Whole mountains of ore are found. To the Metcalf and Longfellow mines the Arizona Copper company operates a twenty-inch narrow gauge railway to carry ore to Clifton, where the main plant is in blast. The company also was the line of railway running from Clifton to Lordsburg, N. M., a distance of seven-ty-one miles, where connection is made with the Southern Pacific. Nearly the entire male population of Clifton are employes of the Arizons Copper company. The company store is a mammoth establishment. What surprises most copper knowing people when they Great care must be used to prevent a total complet collapse of this necessary structure. The chemist makes nearly all of the chemicals spring. WYOMING GRAND ENCAMPMENT.

Gradually interest is being awakened in the mines of the Grand Encampment dis-This year, roughly speaking, 19,000 acres in Oregon were planted to potatoes. The yield is given as 1,890,000 bushels, an increase of 590,000 bushels over last year and 29,000 bushels more than in 1895. In Washington the acreage in 1896 was 18,000, and 193,000 bushels more than in 1895. In WashIngton the acreage in 1896 was 18,000, and
this year 19,000; 2,280,000 bushels were
raised this year, which is 380,000 more bushels than in 1896, and a few bushels less
than in 1896, and a few bushels less
than in 1895. The potato crop in the United
States this year is about 174,116,000 bushels,
as compared with 245,480,000 in 1896 and
286,350,000 in 1895. Canada has fallen from
286,942,000 bushels in 1895, and 56, 280,000 bushels,
as compared with 245,480,000 in 1896 and
286,350,000 in 1895. Canada has fallen from

struck one with a hammer. The cartridge exploded, blowing away one of Young Carr's of an engagement.

A number of farmers and business men in seriously injuring him.

It is reported by whalers arriving in San generous idea of loading several cars with Francisco that eight men from the crews of the various ships of the winter fleet have been frozen to death in the Arctic.

potatoes and other products of the rich soil of that valley for transmission to Ireland, where the potato crop is a failure, and fears een frozen to death in the Arctic.

The Oxnards have made a proposition to are entertained of a famine among the poorer

suspected of starting a forest fire, were tried it has hitherto been supposed had never in San Francisco and acquitted because of gained a footing in that section. Mr. Gaines an error in the survey. They were rearrested says that on a quarter of an acre the plants on a new complaint. ravine many of the plants can be seen.

The Lincoln County Times claims that that county's wheat land produced this season an average of forty bushels per acre and the yield of the county will be nearly twice as great as any former year. Almost as many bushels of grain have been marketed al-ready in Davenport this season as was marketed in all of last year and the crop has scarcely begun to move.

OREGON. The largest cargo of lumber yet to cross the Nehalem bar was taken out by the three-masted schoener Prosper. She carried about 275,000 feet and made the round trip from San Francisco to Nehalem and return in should transfer days. about twenty days.

Contractor Jerry White with a force of skilful workmen, is constructing along the banks of Powder river, in East Baker county, about 500 feet of powerful levee, which is at the expense of a number of enterprising and the state of the state terprising property owners, the improvement to cost in the neighborhood of \$2,000

George Mayrer of Mayrer' that the new flume into St. Helens will be completed about November 5 next flume will be extended a mile and a quarter up Milton creek, where a fine belt of timber will be tapped. The company that Mr. May ger represents expects to handle 30,000 cords

of wood yearly, Agent Casson has completed the work of locating the Indians in Harney county. One hundred and fifteen red men have taken advantage of the government's generous dena-tion. Mr. Casson says that the Indians are not allowed to rent or lease their claims except old, blind and infirm Indians, and the renting or leasing is done by the depart-

So many horses have been affected by what is commonly termed pink-eye in Shernan county that O. P. Hulse, who is authority in such cases, has given the matter some attention. He thinks the disease is not pink-eye but is caused from over-feeding. The hay this fall contains nearly twice as much wheat as formerly, hence overfeeding is easily done. Hot and dusty drives with irregular watering has much to do with bringing on the disease

A Lincoln paper says it doubts whether in any former year there has been such immense quantities of fine, marketable fruit, A mining section which has sprung into prominence within the last few months is Red Top, about six miles north of Sylvanite, in Fiathead county. Some remarkable strikes have been made of large ledges highly min-

Drex L. Shooman says we have one shoe in the house that proves satisfactory to everybody-no matter what your business may be-it's a shoe that for solid comfort can't be beat-that's the Hanan & Co. shoe-this shoe has the reputation of being the only shoe on the market that you do not have to break in-just the shoe for tender feet-a regular foot-form shoe that fits from the start-a shoe that looks well-and wears well-and is always satisfactory-they come in all sizes and styles-if you want a perfect shoe you should look at the

Drexel Shoe Co.,
