

TEACHERS ENDORSE THE IDEA

Omaha Exposition Convention Finds Favor Among Educators.

STATE ASSOCIATION PLEDGES SUPPORT

Strong Resolution Adopted at the General Session—Short Review of the Sectional Work of Yesterday.

LINCOLN, Dec. 29.—(Special.)—The State Teachers' association has been growing in size as well as in interest today.

The question of holding an educational congress at Omaha next year is also receiving much attention.

Whereas, it is proposed to hold in Omaha during the month of August, 1898, an International Exposition, which continues from June 1 to November 1, 1898, a meeting of the teachers of the state.

Resolved, That the teachers assembled in our annual state association, do hereby express our approval of the plan to hold such a meeting.

Resolved further, That the secretary of this association be instructed to forward at the close of this meeting a copy of these resolutions to the secretary of the exposition.

Resolved, That the teachers assembled in our annual state association, do hereby express our approval of the plan to hold such a meeting.

Resolved, That the teachers assembled in our annual state association, do hereby express our approval of the plan to hold such a meeting.

Resolved, That the teachers assembled in our annual state association, do hereby express our approval of the plan to hold such a meeting.

PREPARING BEEF STEERS

Old Kansas Feeders' Experience with Different Breeds and Methods.

PREFERS SHORTHORNS TO ALL OTHERS

Advises Farmers If Possible to Feed All the Stock They Raise—Value of Different Kinds of Feed.

The report of the Kansas Board of Agriculture, recently prepared by Secretary F. D. Coburn and devoted to "The Beef Steer," contains interviews with 100 of the most experienced and extensive beef-producers in the state.

"Of my forty years' experience in beef-production I have had in Kansas, which I most certainly regard as the appropriate fatness and maturing ground for cattle reared in the north and west, as well as our own. I buy nearly all the cattle I fatten, and think the breeds rank as follows for profit, viz: Shorthorn, Hereford, red polled, angus and galloway; the neiger full-blood the better in all cases.

"I prefer calves suckled, they being usually stronger and more vigorous than those hand-raised. I give the milk of my cows to my calves, and allow them to clean corn, stubble and alfalfa fields, and in fact the whole farm, and keep growing every month in the year.

"I do not believe in fattening calves until they are young; this should be done when there are no flies. Give some grain. Water, the quantity to be determined somewhat by the weather, and the prices of forage and grain. Steers started thus are best disposed of at two or three years, though for a farmer with only a few, the last of the year is better, and it may be better to sell as stockers, at one or two years.

"FATTEN YOUR CORN CATTLE. If prepared for it he understands the business, a farmer should fatten with ever cattle he raises. There is a possibility of making a profit by fattening cattle when feeders, and fat cattle are at the same price, but unless corn is below 10 cents, or beef very high, and roughness very low. Under existing conditions 2 to 4-year-olds, after four to seven months on full feed, are the most profitable for marketing. Three and 4-year-olds from anywhere in the north or southwest, preferably toward the north, may do well; a good deal depends upon their degree of docility, and they ought to be well bred.

"Cattle from central Texas should have a season on Kansas grass before fattening as acclimation. Dehorning improves cattle for handling generally, besides making them worth 10 to 15 cents per hundred more on the market, and breaking them down. Three and 4-year-olds from anywhere in the north or southwest, preferably toward the north, may do well; a good deal depends upon their degree of docility, and they ought to be well bred.
