

**FIREPLACES IN GREAT FAVOR**

No Room Complete Without Grates and Fire Dogs.

**RECENT CHANGES IN THE STYLES**

**Flemish Decoration in Ingie Nook and Settle, with Jacobin Tapestries, or Deep Hooded Copies of Old Houses.**

The very heart of every beautiful and newly decorated room is the fireplace, says the man who deals in mantel shelves, grates and fire dogs, and he ought to know, for never before has he done bigger business than this autumn. Houses that are being built or are in process of redecoration are all having their chimney pieces refitted, and the demand of the householder is for a fireplace where wood or coal, not electric embers or gas, can be made to burn.

A half a dozen years ago, when rich Americans were enthusiastic over French fashions, the demand was almost exclusively for French palaces and chateaux; now, however, a strong reaction has set in in favor of the English mode, and you cannot achieve anything more admirable in house decoration than to have your chimney-piece copied from Hampton court, Hadden hall or Dalkeith castle, and in his North Carolina home Mr. George Vanderbilt is credited with having

old style serving basket of black iron holds the coals over a step of rich red Welsh bricks. Graystone, left plain, holds the jumbo and mangle piece, and over it suspended basket juts out a host of red tiles to match the brick hearth.

**Jack and Tinder Cup.**

Now this is the ingie nook as it is seen today in old Lancashire and Westmoreland houses, whence they are copied exactly, even to the wooden jack in the corner, used 150 years ago for pulling of the master's jack boots, when he came home after a day with the hounds. The jack is practically utilized as a footstool, just as the tinder cup, sitting on a jutting brick by the grate, receives nowadays the ashes of the cigar-smoking American.

Quite as fashionable a mantel piece as the ingie nook, copied from a Jacobean house, is a New England chimney corner, copied from any of the old seventeenth century frame houses about Plymouth, Newport or Boston. They have been introduced this year in many houses where the square hall is used as a living room and where tea is served in the afternoon. The whole face of the chimney and the lining thereof is done with red brick, carefully antiqued to get the proper age color. The bricks are burnt, then buried and finally, when the fireplace is built, a wood fire is used to wear away their edges, in simulation of the gnawing tooth of time and usage. Quite as often the whole fireplace is done in roughly set field stones and the wooden mantel is carved with the flat rosette and neat scrolls, thus coming into the colonial here.

Those who can afford and prefer to burn wood in their New England fireplaces use the small brass fire dogs and treasure their

tered by a window. A 20-year-old son of the murdered couple slept upstairs. He heard no noise, and went to bed as usual, and a large sum of money in the house. The coroner and detectives are investigating.

**PRESERVATION OF FORESTS**

**Defense of the Ranger System Recently Inaugurated.**

**WYOMING EXHIBIT, EXPOSITION GROUNDS, OMAHA, Oct. 14.**—To the Editor of The Bee: I notice in this morning's Bee an article taken from the Boston Transcript, written by that paper's Colorado correspondent (or rather by some peripatetic wanderer who is connected with that paper), with reference to forest fires that needs some attention. The article in question speaks of the terrible ravages of forest fires in the mountains, and then goes on to score the management of the forest reserves, characterizing it as a farce. He says the system has been in operation for a year, and that it is a political machine and used to pay political debts; that old and incompetent men are employed and many more criticisms that may or may not be in place.

I am from Wyoming, and know something about the forest fire business. For twenty years I have seen the annual devastation of our mountains by fire and been compelled to stand helplessly by while the terrible work went on. As the editor of a small weekly paper I have earnestly and persistently advocated government supervision of our forests as our only salvation, and have, in consequence, closely followed the action of congress on that subject. Very recently the irrigation congress was held in Cheyenne, and

**MINING IN THE BLACK HILLS**

**Latest News of Interest from the Rich Mineral Regions of South Dakota.**

DEADWOOD, S. D., Oct. 18.—(Special.)—A little over a year ago there was one of those booms in the Black Hills which every mining camp has at intervals, which never does any good, but instead a great deal of harm to the camp or district. The people of the northern hills have gone wild over Carbonate, Bald Mountain, Ruby Basin, Yellow Creek and other camps and the customary excitement prevailed for a short time during the first discoveries. The newspapers and the general public were excited by a boom which, sometimes merited and more frequently unmerited. Last year at this time Two Bit was on every person's mind in the Black Hills, and a good many eastern people became interested in the several companies which were organized by the Hardins.

In a very short time there were fine hoisting plants in operation in Two Bit gulch and mining ground was in demand at high figures. The Hardin Standard company was the first one to reach quartzite at a depth of 100 feet. Considerable drifting was done and the country went wild over a reported strike of a twenty-two-foot body of pyritic ore. The other four companies which were organized kept on their feet for a short time, but were not able to get down to the quartzite. Suddenly the Hardin Standard company closed down, followed by two of the other companies. The remaining companies are still at work sinking their shafts to quartzite. The fear is so frequently expressed that there has been another bit of misrepresentation to eastern capitalists, the resources of the hills that it would seem well to give the facts of the Two Bit case.

The whole Two Bit boom was originated by the Hardin brothers, James and Charles. They had worked for years on some of the ground and had what they considered good indications of good ore bodies. The brothers went to Chicago with samples of their ore and succeeded in getting a number of wealthy men interested in their prospect. The result was that some of the money was expended lavishly on the surface. Everything was for outside appearances. There was a sudden withdrawal of financial support on the part of the investors, and the companies were left in a very bad way. The reason for the failure was that the men who had been induced to take stock in the companies were ignorant of mining matters and did not comprehend on the start how much money was required to open up a mine, and as a result, after expending what they thought ought to have been sufficient to bring some returns back on their money, they became discouraged and withdrew their support, through no fault of the Hardin brothers.

With the exception of the Hardin original, none of the companies have gone to quartzite where it is reasonable to expect ore will be found. A large body of pyritic ore was found in places in the Hardin mine and some of the men who took stock in it sold. The general average was, it is said, rich enough to treat at a good profit at a smelter owned by the company. There is plenty of this grade of ore in the mine. It is the general opinion of those who have been engaged in mining in formations of this kind, that the Hardin company stopped work too soon. There are many indications to lead one to believe that there is a large body of "blanket" of ore underlying the entire basin.

The Hardin brothers are for the present unable to swing all of their first undertakings, but they will eventually get on their feet once more. They will soon go to Chicago and farther east. If necessary, and one of the brothers is contemplating a trip to Europe to get the necessary capital to complete the work undertaken by Two Bit. Few districts have been so thoroughly examined by experts and mining men as Two Bit. Six written reports, all favorable, have been made by them. If any criticism was made of the Hardin work, it was that they perhaps tried to bring too big a deal in organizing so many companies at one time. The ore is undoubtedly to be found in this camp, but it will take the usual amount of capital to find it.

The Detroit and Deadwood company is a single shaft across the gulch from the original Hardin. The company is composed principally of Detroit and Chicago capitalists. This company is somewhat different from the Hardin companies, in that the members are determined to find ore and are not content with what is known to be in order to find it. The shaft is down 150 feet and it is thought that quartzite is near by. The company has a very complete hoisting plant and on the start all of the stockholders have been educated by the company to the fact that the property would be required to get a mine opened up.

The Golden Crest Mining company struck a narrow shoot of ore this week on its property a half mile farther east from the Detroit and Deadwood shaft. The company was only down 50 feet and it is supposed that the stratum of ore struck this week is a vertical one and extends downward to a flat body of ore. Considerable ore has been mined in past years from the surface by the original owner, Fritz Weber.

The greatest vein in the entire Black Hills is in Strawberry gulch, where the Gilt Edge, Dakota Maid and Union Hill properties are. The Gilt Edge mine is producing thirty tons of ore per day and there is one solid body of ore opened up thus far, namely, a body of ore 200 feet wide and 200 feet deep, and it is estimated that 10,000 tons of ore are in sight. The general average of the ore by car lots at present is about \$50 a ton gold. Three assays were obtained this week from a new shoot of ore which was only down 50 feet. The ore was not a very large shoot of this high grade ore, but it shows that it is in the mine somewhere. A tunnel is being run from the bottom of the 200-foot shaft and a fifty horse power gasoline engine and hoist are being put in to get the ore out of the shaft as it is sunk deeper. Work on the chlorination works and smelter at Rapid City is being pushed by this company.

The Edgemont and Union Hill company is doing great work in developing some of its claims north of the Gilt Edge. On the Nevada claim a shoot of ore was struck the first of the week which gave some assays of over \$1,500 a ton gold and the shoot appears to be quite large. On the Union Hill claim, across the gulch from the Nevada, the company is working on a large scale. The ore averages \$10 a ton gold and about \$1 is saved on the plates and a large percent of concentrates. Satisfactory tests have already been made on ore from the Hoodoo claim, the company running the Gilt Edge stamp mill at Galena with satisfactory results. The mammoth building, which was partially built by Grabie for a 180-stamp mill, is being enclosed and its gashlighting completed. The ore is being run from the shaft at its sunk deeper. Work on the chlorination works and smelter at Rapid City is being pushed by this company.

**WITHIN REACH OF ALL.**

**Strength and Good Sleep Follow the Use of Warner's Safe Cure.**

"Live on sixpence a day and earn it."

This was the advice of a Scotch doctor to a patient who had gone to a disease originating in disordered kidneys. The belief that kidney trouble is nature's punishment for high living and lazy folks is a widespread delusion. Cold, exposure, worry and excess of toil produce it. The poor sufferer with the rick in all ranks and conditions of society, Bright's disease does its fearful work.

To fret over his condition is natural for the invalid, although his reason teaches him that fretting only makes matters worse. To the sick man or woman, there is a world of cheer in this note dated Lincoln, Neb., March 9, 1888:

"I take no little pleasure in saying that I have used Warner's Safe Cure and found it to be beneficial in relieving kidney and rheumatic troubles. I have used several bottles and found the medicine to possess all the merits claimed for it."

Gran Ensign, ex-Sheriff, Lancaster Co.

Mrs. J. N. Sharp, of the same city, writes:

"I have used Warner's Safe Cure at different times and found it to be exceedingly helpful in kidney trouble. I have suffered a great deal from weakness and sleeplessness and was not able to be about without more or less physical suffering, but after having taken the first bottle of Warner's Safe Cure, I began to improve and have gained so much that I must commend its great value to others suffering like myself. I know that it has been of great benefit to me."

Observe that neither Mr. Ensign nor Mrs. Sharp speaks of suffering great pain. The first approaches even of fatal forms of kidney disease are rarely painful. Pallor and sleeplessness, indigestion and puffing of the hands and face, with occasional palpitation of the heart are seldom recognized except by physicians as due to deranged kidneys. There comes a time of black helplessness and unspeakable desolation of heart.

Do not wait even for the approach of that terrible hour, and, above all, do not make experiments. There is one true remedy within the reach of all.

For over twenty years Warner's Safe Cure has been before the public and its value is proven beyond a doubt.

been the first person to recognize the superiority of the English method in building fireplaces.

The chimney piece and fittings in the library of Baltimore are patterned, in many respects, after the one in the library of an old Scotch castle, and the does that uphold the giant logs in this stately room stand nearly five feet high. They were designed and cast in bronze in this country, but every American cannot afford either the trouble or the expense of burning seasoned logs, and in all the newly done-over city houses the grate is still the thing. Around the hob, 40 or basket grate is then built a mantel,

ashes, but in city houses wrought iron dog grates are preferred for holding a palping room, library and hall mantelpieces, so tating bed of Welsh coal, and cups and crumpets are kept hot in the oven that opens in one side of the bricked walls.

**Some Splendid Specimens.**

After the long reign of Louis Quatorz, Quinz and Seize periods of fireplaces for drawing rooms the fashion is now for the beautiful and elaborate Adam grates and fenders of exquisitely engraved and pierced brass. One and all these are made with outstanding fire-dog pedestals in front, while the bars of the grate itself are of steel polished like a canonic needle. So elaborate is the work on some of these Adam grates with dogs that their cost mounts up in the thousands. Such grates have frames of carved Algerian onyx, which is much more jewel-like in beauty than the Mexican onyx, and far rarer. Fleur de teches marble, which comes from France and is most exquisitely inlaid, is another material used in newly-decorated drawing rooms and boudoirs. Fleur de Pecher is a rose tinted marble, decorated with other marbles and with inlay of metals, but the top notch of extravagance in ornamental mantels has been reached in one New York house, where the dull brown stone of the fireplace jamb and mantel shelf is full of precious Persian turquoise, just as it appears in the mother rock.

As there is an accepted fashion in draw-rooms the new law of house decoration enforces the very choice style of Queen Anne chimney piece of the dining room. The best of these are copied from Hampton Court palace and Welbeck abbey, and the blackest sort of oak is used in their composition, while only a very little of the best Nankin china is allowed as bric-a-brac on the shelves. The tops of these chimney pieces reach as high as the frieze on the wall, and while the top and sides of the piece are in grotesquely carved corbels and stepped jambs, the fireplace is done in antique glazed bricks with niches on either side, to hold statuettes or dishes of toast and tea.

By every device the dining room fireplace is kept free of anything like frivolous ornament and in this autumn several superb mantel shelves have been taken bodily out of old English houses and brought over for the ornamentation of those American homes where beauty is attained at any price.

Dr. Bull's Cough Syrup always cures bronchitis and whooping cough, equal to the wonderful remedy. Price, 25 cents.

**Three Children Burned to Death.**  
LANSING, Mich., Oct. 15.—Three children of Michael Anderson, aged 2, 4 and 6 years, were burned to death today at Peagram. Their bodies caught fire while the father was away and the mother was out milking. The place burned very quickly and the children were fatally burned before they could save themselves and each other. It is thought that the eldest child was playing with the kitchen fire and thus set the house on fire.

You invite disappointment when you experiment. DeWitt's Little Early Risers are pleasant, easy, through little pills. They cure constipation and sick headache just as sure as you take them.

**Murdered by Burglars.**  
KANKAKEE, Ill., Oct. 15.—Emil Chiniquy, a wealthy retired farmer, 45 years old, and his wife, were found murdered today at their home in Kankakee, about six miles from Kankakee. Their heads were crushed in by some heavy instrument. Burglars had en-

at that congress one of the interesting topics that occupied the attention of that body was this very question of forest fires and their effect on irrigation, and the necessity for some action by the general government looking to their protection, in the face of that congress Senator Francis E. Warren delivered an address in which he outlined what congress had done and what it contemplated doing. He said that on the very last day of the congress which adjourned the last summer, it passed a resolution placing at the disposal of the secretary of the interior \$100,000 with which to put in operation the law looking to the protection of the forest reserves recently established by presidential proclamation and that previous to that time nothing had been done toward the appointment and establishment of forest rangers simply for want of means. He said further, that the secretary of the interior could do nothing toward the preservation of even the government reserves until that resolution providing him with funds, was passed though he was extremely anxious to do so; that immediately upon being provided with funds he proceeded to the selection of superintendents of divisions and minor officers and put the machinery into operation for the protection of the government forest reserves into operation.

Now, this was only three months ago. If there was a system of government supervision before that—and this man says it has been in operation for a year—I never heard or knew anything of it and must have misunderstood Senator Warren's statement. I don't think I am mistaken, though I am much more inclined to think that the "other fellow" that Boston Transcript man is mistaken. I say this for the reason that there are many such men, alleged correspondents, you might call them, who are roaming around over the west misrepresenting everything that their pens touch. Like the yellow journals, they want to put forth something sensational and know that it is perfectly safe to attack the government for the reason that the government won't strike back. They should be rounded up and put where they belong—in an institution provided for the naturally vicious and depraved minded.

If I am not grossly mistaken in this matter of forest rangers to look out for the preservation of our forest reserves has been in operation—actual operation—less than sixty days. Now what can be told of the value or worthlessness of a system that has been tried no longer than that? Perhaps the Boston Transcript's criticisms are right and I am wrong. If I am, will some one please put me right.

Now, as to the preservation of the forest in the Rocky Mountains, any one can see how necessary that is, not only to us of Nebraska, Kansas and the Dakotas. We are very glad to see the government take steps to look after its forest reserves, but what we want it to do is to extend its supervision to all the forests on our mountains. That it does that there will be annually many thousands of acres of valuable timber destroyed and we shall be helpless to prevent it. With the strong arm of the government behind them rangers can prevent much of the waste that is now annually going on. What is everybody's business, you know, is nobody's business. Let the government or congress wake up to the importance of taking care of its forests. They belong to the government and it is the duty of the government to preserve them for the benefit and protection of the whole people. Yours truly,  
J. P. CRAWFORD,  
Superintendent Wyoming Exhibit.

**SUPREME COURT SYLLABI.**

534. Bank of Maywood against McAllister. Error from Lincoln county. Reversed. Harrison, C. J.

1. Mere voluntary forbearance of the creditor or his mere failure to institute and prosecute a suit against the principal debtor will not operate the discharge of a surety on the obligation of indebtedness, nor will noncompliance by the creditor with a request or notice of surety to commence suit against the principal work the surety's release.

2. A dismissal of a suit which is not upon or does not involve the merits is not such an action on the part of the creditor as to bar the surety from recovering on the estate of the deceased adverse party.

3. The surety is not bound to pay the debt of the principal debtor, nor is he bound to pay the debt of the principal debtor, nor is he bound to pay the debt of the principal debtor.

4. The sale of lands under a decree of foreclosure must take place in the county in which case the sale must occur at the door of the county in which the land is located.

5. The sale of lands under a decree of foreclosure must take place in the county in which case the sale must occur at the door of the county in which the land is located.

6. The sale of lands under a decree of foreclosure must take place in the county in which case the sale must occur at the door of the county in which the land is located.

7. The sale of lands under a decree of foreclosure must take place in the county in which case the sale must occur at the door of the county in which the land is located.

8. The sale of lands under a decree of foreclosure must take place in the county in which case the sale must occur at the door of the county in which the land is located.
