FROSTS IN FEVER DISTRICT Comes Much Earlier Than Common-Expected to Be a Check to

WASHINGTON, Oct. 22 .- The weather bureau today issued the following bulletin on frosts in yellow fever districts: "This morning's report shows frosts generally throughout the infected district. In Alabama, eastern and northern Mississippi and northern Louisiana, the frosts were heavy and killing; in southwestern Mississippi and southern Louisiana light frost was reported. At Mobile the minimum temperature was 40 degrees and at New Orleans 46 degrees, the lowest previous record for the third decade of October being 34 degrees at Mobile and 42 at New Orleans. November 18 is the earliest date on which freezing temperature has ever occurred at New Orleans and November 2 is the earliest date of freezing temperature at Mobile. In central Mississippi and northern Louisiana and also in northern Alabama and northern Georgia freezing weather has occurred in the third decade of October.

The first heavy frost curred as late as December 29 at Mobile, while at New Orleans November and December have in a number of years failed to show the occurrence of heavy frost. The average date of first heavy frost is November 22 at Mobile and December 7 at New Orleans. Average minimum temperatures for the regions referred to range from 59 degrees to 55 degrees during November, with occasional periods of freezing temperature. The occurrence of light frost Tuesday morning, supplemented by heavier fronts and lower temperature this morning, may be considered unfavorable for the further prog-

ress of the disease. Present conditions indicate frost and temperature of 40 degrees or slightly below tonight in Alabama, Mississippi and in the interior of Louisiana. The temperature will probably remain for several days below the aeasonal average, which is 66 degrees at

New Orleans and 65 degrees at Mobile. "WILLIS L. MOORE. "Chief of Weather Bureau."
