The new issue of \$18,000,000 stock will amply provide for this and leave a good margin for any betterments of the line or rolling stock, and perhaps for some of the smaller additions, which the company has asked permission from the rapid-transit commission to build.

Horseless Carriages.

The automobile movement already has a sure and firm grip on the country. Even the mustangs which drew travelers over the sixty miles journey between Flagstaff, Ariz. and the Grand canyon are to be shelved to make way for a line of autocars. A question which just now interests keenly the public as well as experts is the character of the motive power to be adopted for the enormous number of automobiles which will soon be seen in every city in America. The gasoline motor is high in favor and will doubtless fill a broad and useful field, but it is remarkable that in a recent cab contest in Paris, hitherto the home of the oil motor carriage, where was given the most complete and practical series of tests yet organized, eleven out of twelve competitors used electricity. As a result of this contest the entire Paris cab system will substitute electricity as a motive power before the close of the present year. In fact, it is generally recognized that electricity, for the present at least, is pre-eminently the power for the congested traffic of large cities.

Electricity a New Manure.

The title of "the new manure," which agriculturists are now giving to electricity, would seem from the results of the experiments concluded a few months ago by Prof. Lemstrom, at the University of Helsingfors, to be amply justified. In these experiments, wheat, rye, barley, cats, white beets, red beets, potatoes, carrots, radishes, parsnips, onlons, celery, beans, peas, strawborries, raspberries and tobacco were grown in equal areas in two fields, one of which legislature, since the adoption of the biennial was under ordinary cultivation, while the session idea. other was periodically charged with electricity. The results of the electro-culture p. m., when Governor Bushnell, after an inof the farm produce have already been vocation by Rev. H. H. Barbour, laid the made widely public. The yield of tobacco was increased by the electrical treatment to the Board of Trade auditorium, where the of the plants 40 per cent, and the photographs of the two fields-the "experimental" and the "control" lots-only 164 hours after the current was turned on show a wide difference of growth, the augmentation heing markedly in favor of the "control" lot Prof. Lemstrom found that a good supply of water was absolutely necessary for the tobacco plants; that very small doses of

electricity should be given, and none at all when a hot sun was shining on the plants. Electrified potato plants gave, in garden soil, an increase of 76.2 per cent, and on the field 24.3 per cent. Red beets gave, in garden soil, 65.3 per cent, and in the field 31.7 per cent. in a high degree accelerate the ripening of fruits, herries and roots, and probably develop more sugar in them. In the green-

house, the strawberries under electrical current ripened, on an average, in thirty a wall during the progress of a small fire to-days, while those not electrified took fifty- day at the building of the Baltimore Barrel days, while those not electrimer took hity-four days to ripen. The same was noted with raspberries, though the difference of time in their case was only seventeen days. An analysis made in France shows that the electrified roots have 15 per cent increase of sugar, and it is noted that the strawberries sugar, and it is noted that the strawberries and dollars.

ST. LOUIS, Feb. 16 .-- A special to the Post-Dispatch from Taylorville, Ill., says A stock company, consisting principally of Taylorville men, has been organized for the purpose of buying the Penwell and Springside coal mines at Pana. The operators, it is understood, ask \$110,000 for the mines and the company has offered them \$100,000. Judge Colgrave said today that there is but little doubt that the deal will be made. He says that the State United Mine Workers' association has agreed to pay \$53,000 if the mines can be purchased for a reasonable amount, If the proposed deal is consummated the negroes will be discharged and white miners substituted.

Twine Plant in Penitentiary.

TOPEKA, Kan., Feb. 16 .-- A bill was in-roduced in the house today providing for a binding twine plant at the penitentiary, appropriates \$40,000 for the plant a and \$150,000 to purchase raw material and carry on the business. The warden and directors will put in the plant and manage it. The bill was advanced and will probably pass tomorrow.
