 Indicates Sunday. \*\* Holiday.
 CATTLE—It was a holiday and the marel partook very much of the holiday charcetter. There were only a few loads of cat-cle in the yards and of the number here ust about one-half was consigned direct to backers and not offered for sale. In reality here was not enough cattle of any one kind o make a test of the market. Considering to make a test of the market. Considering that it was a holiday there was a good demand and the few cattle offered changed hands in a very short time after the market opened. Everything was sold and weighed up in short order and everyone went home to enjoy the holiday. The prices paid for the cattle were just about the same as prevailed on yesterday's market, there being no quotable change. Representative sales:

BAR SILVER—Quiet at 275-16d per ounce. MONEY-44665 per cent. The rate of discount in the open market for short bills is 5% per cent and for three-months' bills 4%.0478 per cent.

Foreign Financial. LONDON, Nov. 20.—The stock market was somewhat unsettled today in conse-quence of the rise in the discount rate of the Bank of England from 5 to 6 per cent.

London, 25f 261/2c for checks. Spanish 16.

On the bourse today prices were fairly firm. The rise in the discount rate of the Bank of England had only a temporary influence, as it had been anticipated and as the settlement was easy and money abundant. Commitments appear to be light. Spanish 4s, Brazillans and Italians were sought. Rio Tintos and DeBeers were a trice easier. Kaffirs were irregular, closing duller.

A work that is of equal importance with the above is "How England Saved Europe," The Visionia of the Bank of the above is "How England Saved Europe," Chestnut.

vibration of tuning forks and other methods to alternately set up and destroy crystallizaion in the metal, but in vain. At las he put a solenoid, which is a cylindrical coll of wire, the convolutions of which are ircular, around the "tired" razor and ran an electric current through the wire. The blade was much improved, but still the crystallization was not entirely neutralized The experiment was being abandoned as a ailure when the inventor bethought him hat an interrupted spinal curve might give him what he was looking for. In this device the current is changed according to the frequency of the interruptions, and peculiar effect is produced on the metal tself. It gave the experimenting Italian what he wanted. He had realized that steel and wrought iron must have a normal node of molecular vibration to retain their aseful properties tenacity, resistance, etc. -and that another node of vibration produced crystallization, or a segregation of the atomic masses with little or no cohesion. Now he had at command the means of procurrent and the rod became as tough and strong as it was when it left the foundry. contemplating a visit to the United States, petual replacing of steel rods and bars on big bridges and to substitute therefor the electrical treatment just described by running a coil of wire around the center joints and establishing an electric current, connecting up the colls with the lighting circult of the bridge. It is also stated that he proposes to restore the texture of the steel of machinery and of the frames of sky-scrapers, the cohesion of whose particles has become impaired by crystallization.

Electric Hendlights. The Railway Age, in a recent article on the subject of electric headlights, says: "The enormous traffic which the railways are handling increases greatly the possi bility of accident and the record of the JOBBERS & MANUFACTURERS iast two months of accidents at night is unusually large. From some cursory statistics gathered in a by no means exhaustive or complete investigation it appears that during the month of August last, in the various states of the union, there were eighty-four accidents at night, which it is fair to presume might have been avoided altogether, or, at least, reduced in a more general use of electric headlights. The record for September shows seventyeight accidents. In these two months there were altogether 172 persons killed and 213 persons injured. This does not represent per cent of the accidents, but no reports were received from them. Such a record of damage is sufficiently impressive to entitle to consideration the claims of any one who seriously proposes to reduce

These accidents were the ordinary in these lines of goods, but within the last most common in railroad business-head-on collisions, people run down on track, crossing accidents and obstructions. To quote thousands upon thousands of dry cells to ought to be of some use to the engineer run them, a gigantic number of miniature behind it, showing him what is on the lamps, electric bells, ad infinitum, in addi- track ahead. So far as giving warning of tion to cheap telegraphic outfits, medical any obstruction on the track is concerned. the ordinary oil light is practically value

This is true, and the growing use of elec tric headlights has done much to reduce great deal of business ingenuity must be ex- the number of accidents. The element of safety introduced into railway operation by placing on the engine a light which will enable the engineer to see at night as struction on the track, at a distance sufficlent to enable him to stop the train, muscost, that will prevent railway accidents and at the same time save money to the

Manufacturing Branches.

In the manufacturing branch of the electrical industry, Mr. Martin states, fully \$100,000,000 is actually invested. Three concerns alone represent a capitalization of \$50,000,000. In seven years it is estimated of Sahara, witnessed a remarkable electrical that concerns engaged in long distance power transmission and in the manufacture and operation of electric mining appliances camels and men of the train could hardly be have issued securities aggregating \$100,000,-000. There are over 400 electro-plating esclouds rolled up and the wind and rain were tablishments in the country, with an invested capital of \$50,000,000, Mr. Martin says; the ground and hurled to a distance. Sheets a number of electrolytic plants, representing and clouds of sand were dashed to and fro, seevral millions, and millions more are in vested in electrical bells, hotel annunciators,
