ARID LANDS BLOOM UNDER HIS TOUCH

Demonstrates the West is All Right for Crops if Rainfall is Conserved by Simple Method of Tillage.

(From a Staff Correspondent.) LINCOLN. July 26 .- (Special.) -- Prof. H. W. Campbell, who calms to have discovered a method by which successful crops may be grown on semi-arid lands, regardless of drouth, stopped in Lincoln today enroute from the Pomercy model farm in Graham county, Kansas, to his home in Holdrege. For several years Prof. Campbell has been experimenting with the soils of Nebraska, Kansas, Colorado and North and South Dakota and he declares that he has demonstrated all that he claims

"I am trying to show the people that the arid and deserted land in these western states. I don't mean the sandhills, but the almost limitless amount of land that is considered practically worthiess because of repeated drouths. Briefly stated, my method is the storing of the natural rain- form a perfect root bed, a constant and

fall in the soil. "I am now in charge of 480 acres of land oration of moisture and undisturbed roots." belonging to J. P. Pomeroy in Graham county, Kansas. When I first went there the land was worth \$1.50 per acre and it was begging at that. During the last Vincent Knoll of Sebraska City is month several hundred acres of land in the county have been sold at from \$5 to \$8 per acre and Mr. Pomeroy, who owns 60,000 acres, values his at \$10 per acre. The crops on the land under my charge and being cultivated according to my clal Telegram.)-Vincent Knell, a laborer the bonds. The result is doubtful. method are all doing well, but on adjoinat the starch factory, was run down and ing land all vegetation has already been killed by a Burlington freight engine this killed by the drouth.

## Simple Method of Tillage.

"From time to time, for a long period. the farmers of this country have seen their crops cut short by drouth and they have submitted without thinking or knowing that it was in their power to prevent the damage. Five years ago it was supposed by every farmer that he must bow with folded arms to the ill effects of the long or short dry periods during the growing season. In 1892 I began to tell the farmers that they could avoid the trouble by storing and conserving the natural rainfall in the soil by a simple method of tillage and in that way conquer drouth. The first announcement of my discovery was received with many sneers, but, undaunted by the opposition which arese on every side. I kept on experimenting and each succeeding year strengthened my faith. I have demonstrated that my method is practical, but still the farmers are skep-

"I began farming in Brown county, South Dakota, in 1886. On my farm one crop failure followed another, until I began experimenting. In 1894, when the drouth killed crops throughout the west, I raised over 4,000 hushels of choice early Ohio potatoes on thirty-two acres of this South Imkota land and had it not been for the method I used the crop would have been a failure. In 1895 I began operating experimental fields on the lines of the Northern Pacific railroad in North Dakota and Burlington in Nebraska. About this time the state agricultural colleges took up the subject and the result today is the demon- Woodmen was here today. A parade was strated fact that not only can good crops formed at 11 o'clock which marched to Ellibe grown every year, regardless of drouth. but that fruit and shade trees respond dresses were made by President C. R. Philwith a remarkable growth and the fruit lipi, M. B. Putney, state lecturer, and Mrs. trees with a liberal yield.

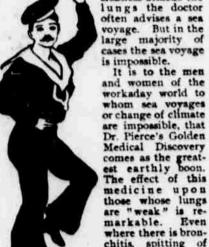

Turns Soil Bottom Upward.

"What is the method? Well, in the first place, there must be a complete rearrangement and pulverizing of the top six or seven inches of soil, which must be turned as rearly bottom upward as possible each year. Before plowing, the top four inches should be thoroughly pulverized and made is fine as possible by a free use of the cisc harrow. This part of the work should slways be done as quickly as possible after a crop is removed. It is so very important that no one can comprehend its value withut a thorough trial. The more completely each particle is separated, one from the other, the better. Then, this finely fitted surface soil must be turned down into the ottom of a furrow six or seven inches deep. Immediately after plowing the lower four inches of the furrow slice must be packed as firmly as possible with the subsurface packer. There are four reasons for doing

"The first object is to completely obliterate all cavities. Where the furrow lies loose the air circulates under the plants and the ground dries out. It must not be permitted to do this. The next object is to cause moisture to gather from four to eight inches from the surface. Stubble, manure and vegetable matter is found in quantities at that depth, and moisture is necessary to rot it and fit it for the food of the crops. Unless this is done the plants | morning an appropriation was made to conare robbed of their most valuable food. We next wish to get the right conditions for the city plant. A well will be driven near rapid root growth in the early part of the the springs after which Blue Springs was season. For this a fine, firm, moist soil

## Johy Jack Tar.

"Jolly" is the word generally asso ciated with the jack tar. He is the picture of health, and the health bub-bles over in mirth and merriment. When people are sick, especially when sickness attacks the

or change of climate are impossible, that Dr. Pierce's Golden Medical Discovery comes as the great-est earthly boon. The effect of this medicine upon those whose lungs are "weak" is remarkable. Even where there is bronchitis, spitting of blood, emaciation, weakness, condi-

tions which if unchecked or unskillfully treated lead to consumption, "Golden Medical Discovin ninety-eight cases out of a hundred works a perfect and permanent cure. It strengthens the stomach and other organs of digestion and nutrition so that the body in all its parts is not merely fed but nourished. And it is by nourishment that Nature builds up the body to resist or throw off disease.

"I had a terrible cough something over a year ago and could find nothing to stop it, or even to do use a particle of good," writes J. M. Parr. Esq. of Cameron. Screven Co., Ga. "I chanced to see an advertisement of yours, and forthwith bought a bottle of your invaluable Golden Medical Discovery." Before I had taken half a bottle I was entirely well."
