EIN WIDENS OUT WITH DEVELOPMENT Deal Has Been Consummated Whereby Semndinavian and Hogan Properties on Elk Creek Change

Hands This Week.

DEADWOOD, S. D., July 6 .- (Special.) -- A sich strike of smelting ore has been made on the Golden Bottle, a mine situated on Squaw creek. The mine is being worked by Arnold and Wall, two miners who have recently taken a lease on the ground. They have started an open cut, following a small vertical, about two feet wide, which shows on the surface. The cut is now in about twelve feet, and every particle of the ore taken from it pays. The men have now taken out about twenty tons of ore, which is exceedingly rich, so rich in fact that they are sacking every pound of it before shipping it to the smelter in this city. It is said that the ore will go better than \$500 to the ton, and from what work has been done on the vein, the ore carries its values all the way through. The vein which is now being worked has only recently been discovered, but on the ground there is another shoot of good commercial ore, but it is not near so rich as the vein which Messrs. Arnold and Wall are working. The vein at the present time is very small, but as it goes into the hill it appears to widen out, so a tunnel will be started from the face of the open cut and driven in so long as the ore maintains its value, and then a shaft will be started. The ore is rich enough now to make the men who hold the lease on the ground their fortunes with a few months. ground their fortunes with a few months

The second cleanup from the Alder Creek cyanide plant, which has been running on ore from the dump of the Little Blue mine on Yellow creek, has been brought The Bee readers. to the city, and the brick is valued at \$10,000. The Alder Creek company's plant is only a fifty-ton affair, so its cleanup for the last half of June was a pretty/big

Wasp 2, as usual, came down on Tuesday last with its semi-monthly cleanup from Yellow creek, and the brick is valued at \$8,000. From the Wasp 2 and Alder of those two plants, would send the promany years.

Big Sale Effected.

A sale of property which bas been pending for a long time-that of the Scandinavian and the Hogan properties, on Elk creek-will be consummated this week, 10 per cent, of the purchase price having been paid down to the owners. Included in this sale will be about 200 acres of as good mining land as there is in the dis-Erict, and on the most of which is a great deal of work has been done, exposing in many places good ore bodies. The ground is a central and western countles continuation of the Uncle Sam vein, which is five miles distant, and the, ore in the in its character with that taken from the The price to be paid for this amount paid is very small. The Scan- farming prevails. dinavian, with the exception of the Clover Leaf (the old Uncle Sam), has had more work don's on it than any mine in the district and has milled more ore. The ore is a tree-milling, concentrating proposi- more than doubled since 1890. Although detion and will pay well to cyanide. The creased farm values are reported by a few vein in this mine is about thirty-five feet western countles, increases in the value of in 'width and the ore will average better implements and machinery are reported by than \$15 free-milling. There are several nearly all counties. The average value of individual mine owners interested in the implements and machinery for 1900 was \$205 deal, and the most of them are from this per farm. In the northern counties, which caused by the sale will enrich quite a ties this value doubled, and in the re- was \$4,004; the average value of buildings number. The sale is being made to a party of eastern gentlemen, who will, it is said, erect a plant for milling the ere from the ground, some of the claims already being in such a condition that they can begin at once the production of ore, and especially is this true of the Scandinavian, which is well opened up.

Mesars. Smith & Coe of this city have been working a large force of men on the Lids and Piedmont group of claims, on North Bare Butte creek, for some years past, and have now the ground in shape of this city, near Burn's siding on the B. for patent. On the Lida group they have & M. The strike was made in a new shaft a large body of free-milling ore exposed, and crosscut, which have but recently which gives average assay returns of better than \$8 per ton, while on the Piedmont group several veins of refractory has been run along the strike of the vein ore have been opened up, some of them from its bottom. The rich ore, which is very extensive and carrying very high a telluride, was first encountered in the values in many cases. This ground has shaft, and the crosscut started, and the been worked for years, but as it is re- rich streak has continued in the drift mote from treatment facilities, but little of its ore has been tested in any quantity. but what has, has given good returns. Pale cheeks, white lips, and languid step tell the story of thin blood, impure blood. Doctors call it "anemia." They recommend Ayer's Sarsaparilla. Ask them and they will tell you just why it makes the blood so rich and red.

Anemic people are almost always constipated. Their liver is sluggish. They have frequent attacks of sick-headache, nausea, biliousness. Just one of Ayer's Pills each night will correct these troubles. J. C. AYER CO., Lowell, Hass.

Farming in Nebraska

Farming in Nebraska pays. This statement is predicated on the facts set forth in bulletin 193 of the Twelfth creased notably. census, which deals exclusively with agriculture and its allied interests in Nebraska. In the introductory note addressed to Director Merriam, Mr. L. G. Powers, chief statistician for agriculture, says:

statistician for agriculture, says:

A farm, as defined by the Twelfth census, includes all the land under one management used for rasing crops and pasturing live stock, with the wood lots, swamps, meadows, etc., connected there with. It includes also the house in which the farmer resides, and all other buildings used by him in connection with his farming operations.

The farms of Nebraska June 1, 1800, numbered 121,525, and were valued at \$577,659,930. Of this amount \$81,054,120 or 15.8 per cent, represents the value of buildings, and \$456,65,500, or \$1.2 per cent, the value of lands and improvements other than buildings. On the same date the value of farm implements and machinery was \$24,99,450. implements and machinery was \$24,949,450, and that of live stock \$163,319,487. These values, added to that of the farms, give \$737,260,067, the "total value of farm prop-

"The products derived from domestic animals, poultry and bees, including animals sold and animals slaughtered on farms, are referred to in this bulletin as "animal products." The total value of such products, together with the value of all crops, is termed the "total value of farm products."

A vast amount of detailed information Nebraska is contained in the bulletin, from which some statements are condensed for

Nebraska's total land area is 76,840 square miles, or 49,177,600 acres, of which 29,911,779 as well as the per cent of gross income, are acres, or 60.8 per cent, are included in greater for the latter. One Chinese is an farms. These farms, which are of the avrage size of 246.1 acres, contain 18,432,595 scres of improved land and 11,479,184 acres of unimproved land, the total per cent of improved land being 68.6 per centa The number and area of farms has increased rapidly Creek alone, Yellow creek is sending to being 7 and 38.5 per cent respectively. The since 1860, the rates of increase since 1890 the United States assay office in this city establishment of extensive livestock ranches about \$40,000 a month. Besides these in the western part of the state and the two producing plants, there a number of cultivation of large corn-producing areas properties having their ores treated by throughout the state, have effected a subsmellers and cyanide plants outside of the stantial increase in the average size of district, which if added to the product farms since 1880. The development of these industries has been so rapid that the divisduction of Yellow creek up to at least ion of farm holding in the eastern half o' \$50,000. This is pretty good for a short the state, where the farms are more intenguich, but then it has always been a good sively cultivated, has not been sufficient to producer, and from the ore now exposed counteract the expansive movement in the in the different properties which border western section. In the last decade this inon it it is destined to be one/for a good crease in the average size of farms was most marked.

Each decade since 1860 shows gains in the values of all farm property. For the decade ending in 1900 the increases in values are as follows: All farm property, 46.1 per cent; farms, 43.6 per cent; implements and machinery, 51.4 per cent; livestock, 56.8 per

Nearly two-thirds of the countles report increases in the number of farms in the last decade, notwithstanding the severe drouths which occurred between 1880 and 1900, causing the abandonment of many farme in the

The total farm acreage increased in every county except Cass, Saline and Perkins, The openings made on the ground is identical average size of farms for the state is 246.1 the number of livestock farms, many of ground will be over \$100,000, and when which are more than 1,000 acres in extent what the Scandinavian has done in the the average size of the farms is greater past is taken into consideration, the than in the eastern counties, where general

mainder, except in a few southern coun- on farms was \$750, and the average value ties, which reported slight decreases, it in- of implements was \$205. The average value

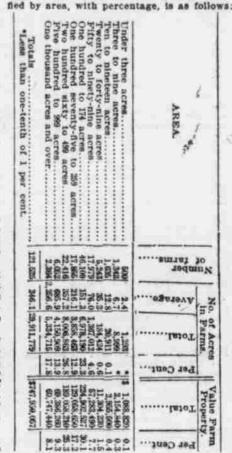

The average expenditure for labor in 1899, whach was \$61 for the state, varied greatly in different counties. For fertilizers, the everage expenditure per farm increased from 17 cents in 1889 to \$1.26 in 1899. Most of the counties report largely increased expenditures for fertilizers. This is due to the growth of flower culture and market gardening in hot houses, which branches call for almost the entire amount of fertiliger used in the state.

Of the 121,525 farms in the state, 76,715 are operated by the owners. In the term "owners" are included owners, part owners, owners and tenants and managers. This amounts to 63.1 per cent of the total. Cash tenants operate 11,599 farms, or 9.6 per cent of the total, and share tenants operate 83,-211, or 27.3 per cent. These figures show a decided variation from those returned for 1890. In that year the farms operated by owners numbered 85,525, or a percentage of 75.3 out of a total of 113,608; the cash tenants operated 8,942, or 7.9 per cent of the ucts, together with the value of all crops, is termed the "total value of farm products."

This value for 1898 was \$162,696,386, of which amount \$70,227,080, or 43.2 per cent, represents the value of animal products, and \$32,469,336, or 56.8 per cent the value of crops, including forest products cut or produced on farms. The total value for this respect included 2 Chinese, 249 Indians farm products for 1899 exceeds that reported for 1899 by \$55,858,769, or 143.4 per cent.

More than 50 per cent of the total. Of the total number of farms in 1900, 99.7 per cent were operated by white farmers and 0.3 per cent by colored farmers. The term colored is respect included 2 Chinese, 249 Indians farm products for 1899 by \$55,858,769, or 143.4 per cent. dians is due to the allotment of land on reservations. More than 60 per cent of farms of the state are operated by owners and part owners, about three-fifths of the farm acreage and of the total value of farm classes. However, the average size, the average value of all forms of farm property greater for farms operated by managers than for any other group. These conditions are due in part to the fact that many of incerning farms and farming operations in these farms are large stock farms, while others are adjuncts to public institutions. Among the colored farmers the Indians outnumber the negroes, but the average acreage and the average value of farm property, owner and one is a cash tenant.

> The number and acreage of farms, and value of farm property June 1, 1900, classi-

Twelfth National Census.

Some Figures from the

of livestock on farms was \$1,196, and the average gross income from products not fed to livestock was \$1,026, making an average gross income on value of farms of 16.7 per cent.

With few exceptions the average value of all forms of farm property increase with the size of the farms. The relative high average value of livestock, and high average gross income for farms under three acres, are due to the fact that this class comprises for the most part dairy and truck farms supplying city markets, and includes twenty-five of the thirtyeight florists' establishments in the state For these industries the incomes depend less upon the acreage than upon the amount invested in buildings, implements and livestock, and the amount expended for labor and fertilizers. The average gross incomes per acre for the various groups classified by area are as follows:

In arranging the classification of farms by principal source of income, if the value of the hay and grain raised on any farm exceeds that of any other crop and constitutes at least 40 per cent of the total property being accredited to these two value of products not fed to livestock, the farm is designated a "huy and grain farm." The same rule is applied to determining and the percentage of gross income are the chief crop for the other subdivisions used in the table below, the figures being for June 1, 1900:

For the several classes of farms the average values per acre of all products not fed to live stock are as follows:

In computing these averages the total acreage is used, and not the acreage devoted to the crop from which the principal income is derived. The wide variations in the averages and percentages of gross income are due largely to the fact that tablishments and nurseries the average expenditure for such items as labor and fertilizers represents a far greater percentage of the gross income than in the case of livestock and miscellaneous farms. The average value of Nebraska farms If it were possible to present the average be comparatively slight.
