SUNSTROKE INSURANCE

When the summer's heat gets about 90 degrees, you are liable to be sunstruck any time you are out in the sun, unless you take the proper precautions. Several years ago, the writer of this, who has spent much of his life in the tropics, thought he was safe from sunstroke. One day he collapsed, remained unconscious for five hours, and at times his life was in danger. As a matter of fact, his blood was so thick and his bowels were in bad shape in the summer time, that he was liable to be sunstruck in temperature that would be harmless under normal conditions. That's all there is to it. Stomach and bowels full of festering, fermenting refuse that forms acids and gases, raise the heat of the body and blood many degrees. Scientists have found that natives of the South Sea Islands, living on laxative fruit, bananas, coconuts, bread-fruit, have a temperature 20 degrees lower than that of white men who are careless about their food or their bowels. It has been found in years of experience, that a CASCARET Candy Cathartic taken at bed-time every night will keep the body clean and cool inside all day, and forms a safe and thoroughly reliable form of sunstroke insurance.
