10c PER SHARE Stock Must Rise Rapidly. Maybe by Leaps When Work Begins Greenhorn Gold Mining Co. Greenhorn District

Offers 75,000 Shares at 10c Each to Begin Work.

Situated in the Greenhorn Mountain Mining District, in Baker County, Oregon—not a prospect, but a gilt-edged mining property—a thoroughly developed vein of free milling ore—

Working Assays \$74.04 Per Ton.

The oldest property in this now famous district, and in one placer washing some years ago produced

Gold to the Amount of \$16,000.

Specimens of ore from this vein in our office—free gold can be seen distributed through the rock. We offer stock in what is destined to be one of the richest gold mines of this section. The property is controlled and operated by mining men of recognized ability, undoubted integrity and high standing. One of those heavily interested is

Judge Jacob Fawcett of Omaha, President.

Principal owner of the Psyche mine, which property is rated worth \$500,000.

Development—An incline shaft has been sunk 195 feet and a drift run about 90 feet to the vein. The shaft house is equipped with a boiler, engine and hoist capable of sinking 400 feet. Fourteen hundred feet of tunnel work has been done, exploring and locating the vein, and some short drifts have been run on the vein, and the ore stoped out in many places.

More money is needed for further developing the property, for which 75,000 shares of the capital stock, fully paid and nonassessable, is offered the public at 10c per share. Many inquiries have reached us for stock in the mine, which fact points to an early advance in the price of the stock. R. L. Farmer, one of the best known and successful prospectors in this section, says of this property:

GREENHORN, Ore., January 21, 1903.—W. P. Killen, Esq., Sumpter, Ore.: Dear Sir: Answering your recent request to tell you what I know about the Greenhorn Mine, permit me to say that I have known it since 1865, and have been familiar with its history since then, as I have resided in the district since that time. In 1896 I saw 90 pounds of amalgam, worth from \$14 to \$18 per ounce, or a total of about \$16,000, taken from the surface washings of the Greenhorn, which was known as the Greenhorn Skimmerhorn claim, owing to the richness of the surface deposits. This was the richest surface showing of any claim in the entire district.

I saw not less than 70 feet of good ore in the shaft, that assays from \$50 to \$150 per ton, and I have been through the drift from the bottom of the shaft 90 feet, and I found it highly mineralized. I am, perhaps, the oldest prospector in the Greenhorn District, being here since 1865. I located the Enow Creek, which was just sold for \$75,000; the Diadem and the Alamo, both of which are valued in the hundreds of thousands, and I can unhesitatingly and unreservedly say that in my judgment the Greenhorn is more promising than any of these were at the same stage of development. Yours truly,

R. L. FARMER.

The purchase of stock in this mine is not a speculation, but a bona fide, safe and conservative investment. The time to purchase stock in the company is now, before the advance occurs. Address all communications to

Baker County, Ore., has four brilliant examples. Snow Creek, one year ago was an unknown prospect; today it is estimated at about \$1,000,000. Psyche, Morning and Phoenix, of the same district, have grown from prospects to valuable mines in the same time.

The above illustrates the incline shaft, its drift and proposed shaft. It could also be used as a base upon which to estimate the amount and value of ore in sight in the vein. With drifts run on the vein and then upraising, the value of the ore in sight would run into the hundreds of thousand dollars value very rapidly. A drift on vein at bottom of 100 feet with an upraise of 135 feet in a 12-foot vein would give 162,000 cubic feet of ore. This divided by 13, the number of cubic feet of this ore per ton, equals 12,461 tons; at but \$15.00 per ton would give a value of \$186,915. When we realize that the vein extends for 1,500 feet on our land, and that instead of sinking but 135 feet we could sink 2,000 feet, and that values increase with depth, the possibilities of our mine become apparent.
