

seemed to have somewhat more difficulty in breathing.

At 7:30 the doctors returned and issued the following bulletin:

Nothing noteworthy occurred during the day and the general condition is satisfactory as it was this morning. Pulse, 96; respiration, 20; temperature, 98.5.

LAPONNI MAZZONI.

Throughout the day St. Peter's was surrounded by the usual Sunday worshippers and steady lines of inquirers visited the Vatican courtyard, where the bulletins are issued.

Unusual rigor was adopted to prevent unseemly gatherings. One notable instance of Vatican sternness was in the arrest of Captain Smith, commanding the Swiss guard, for having given information to the press.

There was a striking scene within St. Peter's last night. In the middle of the German students, all in scarlet cassocks, entered the cathedral. Behind them came German friars in rough hair-cloth cassocks and then German nuns in conventional black and white. These formed a procession and, kneeling first at one altar and then at another, prayed aloud and in silence for Pope Leo.

The congregation joined in the procession until the basilica was half encircled by a moving mass of color and when St. Peter's tomb was reached many hundreds followed the picture of the Savior, held aloft by a statueque monk.

On one side of the brass rails which guard the entrance to the tomb knelt the nuns. Opposite, three deep, were the short heads of the friars, while in the center knelt the young students, their scarlet cassocks making a blaze of color which stretched far down the dimly-lighted nave. For more than an hour no sound came from these kneeling figures, but at intervals save every few seconds the hoarse, monotonous cry, "Ora pro nobis," the dirge-like cadence of the guttural German voices kept drowning the Italian choir, which still sang the vespers at a neighboring altar.

Pope's Room Simple.

As many fantastic descriptions are in circulation regarding the room where the pope lives, one of the pope's nephews who has been daily with him has given the following description:

The room is large, bright and airy. The walls are hung with pale green and gold silk damask. Entering it with the sun pouring through the ample window, is like a taste of spring. A large crucifix on the wall and a generally drawn open, showing on the right the modest narrow brass bed covered with a red damask coverlet. Even in his desperate condition, Pope Leo shows great daintiness with regard to his person, performing a full toilet whenever possible and changing daily his white bathrobe nightgown.

At the head of the bed is a good picture of the Madonna, beside a holy water font, while in the middle of the adjacent wall is an immense crucifix, reaching from floor to ceiling, with an ivory figure of Christ. At the foot of the bed stands a simple walnut writing desk, at which the pope has written the best of his Latin poems.

On the other side of the curtain stands the now famous armchair, which is most comfortable, a small table, a few shelves with the pope's preferred books and nothing more. The chamber gives the idea of extreme simplicity, luxuries being rigorously banished.

Hates Many People.

Even in his present condition Pope Leo has much objection to having people about him, unless specially called, so that even when he was worst Dr. Laponni and his valet Centra could only enter when rung for.

Centra yesterday asked if the pontiff did not think it better to have company. The pope replied tranquilly, "I am in good company," pointing to the large crucifix.

Now and then the pope suspects that something is being concealed from him, so when a copy of the medical bulletin was brought him he read it and then rang.

To Centra, who appeared in response to the bell, he said abruptly: "Bring me another copy of the bulletin," emphasizing "another" and evidently thinking that the first one had been doctored for his benefit, as had been done before.

But yesterday Centra was able triumphantly to bring another identical with the first.

One of the greatest difficulties is to prevent the pope from speaking too much. When anyone is allowed to visit him he immediately begins describing his satisfaction at the pope's recovery, his recovery on the occasion of his last jubilee and also at the manifestations of sympathy from all parts of the world during his present illness. Then either one of the doctors or one of his nephews steps in and, monopolizing the conversation, obliges the pontiff to be silent, which he does not like at all.

It is wonderful what different impressions people receive of the pope's condition. For instance, when Cardinals Ferrata, Segna and Cretoni left the sick room together, Cardinal Ferrata, shaking his hands together, said: "The Holy Father is almost convalescent. We shall soon see him in the Vatican gardens again."

Cardinal Segna, making the sign of the cross, sighed: "Our beloved pontiff is lost," while Cardinal Cretoni, shaking his head in doubt, exclaimed:

"Who knows? He may die, still he may get better."

King Victor Emmanuel has given orders to keep the Quirinal palace in readiness, as he may come to Rome any time from his summer villa near Turin if the pope dies. In any event, the king and queen return to Rome on July 20.

Telegrams of inquiry continue to come from foreign governments. Messages from Bolivia, Argentina and Peru arrived today.

News Reaches Washington.

WASHINGTON, July 13.—Monseigneur Falconio, the papal delegate, this morning received the following cable from Cardinal Rampolla:

"Bright amelioration continues."

GIBBONS STANDS NO CHANCE

Cardinals Declare Neither American Nor Any Other Foreigner Will Be Pope.

LONDON, July 13.—The Daily Telegraph correspondent at Rome telegraphs as follows: "I am authorized to state on the authority of two cardinals, one of whom is himself a candidate, that neither Cardinal Gibbons nor any other foreign member of the sacred college possesses the remotest chance of succeeding Pope Leo."

De Marmora Resigns.

TANGIER, Morocco, July 12.—The news that the war minister, El Monabbi, entered Taza, the stronghold of the pretender, Bu Hamara, on July 7, after seven days' fighting, is confirmed. The rebels were completely defeated.

BOB EVANS SCENTS A FIGHT

Admiral in Command of Asiatic Squadron Looks for Trouble.

FOUR NATIONS' FLEETS ASSEMBLE

Efforts of Russia to Close Manchuria to the World Arouse Great Britain and United States as Well as Little Japan.

(From a Staff Correspondent.)

WASHINGTON, July 12.—(Special.)—There is great activity in the Bay of Pechili, due in great part to the mobilization of American and British ships.

British ships that great big old battleships, a larger number of British and American vessels than ever before in the history of the two countries. But a short distance away, for distance is only relative, the Russians have assembled a fleet of nearly half a hundred vessels, some of them being the most powerful in the Russian service. On the other side Japan has brought together the pride of its navy, ready to make demonstration should occasion arise over the Russian demand to close Manchuria to the nations of the world.

Meanwhile diplomacy of the most strenuous kind is endeavoring to solve the right of Russia to close the Manchurian ports. The open door in China is threatened and upon the diplomats of the four leading nations of the earth devolves the question whether there shall be a standstill in the world's progress in a century or whether the spirit of international peace shall spread its wings over the whole.

"Fighting Bob" Looks for Trouble.

According to a friend of Robley D. Evans, who is in command of our Asiatic squadron, the admiral is looking for trouble, but he is not exactly sure from which end the trouble will come, whether from the interior of China, due to another uprising of the Chinese, or whether the strained relations existing between Russia and Japan will reach the breaking point between these two countries.

Admiral Evans is in close touch with conditions in the Orient. In a private letter to a friend he has said that if a fight is necessary the American squadron over here is a good account of itself. Several months ago he informed the Navy department that conditions were becoming strained in the Orient and consequently some of the very best ships in our navy were promptly ordered to Chinese waters to reinforce the ships already there. The admiral's station with a view of meeting the admiral's request for additional strength. With the ships already in the Bay of Pechili and those on the way to reinforce our navy in Asiatic waters we will have by the first of August the largest American squadron ever seen in foreign waters. Of the twenty vessels which will have in the bay eight of them are armored and at least three of the fighting vessels are of the newest type of naval construction and in splendid condition to render a good account of themselves should necessity arise.

Petition Merely a Pin Prick.

The petition which the Hebrews of the United States will shortly send to Russia through our State department—the letter of remonstrance—will give the Russian government a pin prick so far as the Japanese situation in the east is concerned. The petition, it is expected, will be wholly ignored by Russia, and it is consequently a "pin to the wall," for it will not avail much, and if anything will accentuate the China situation. For many reasons a disagreement with Russia is to be greatly regretted. She has been the friend of the United States when the new nation needed help, and in the dark days of the '60s Russia gave the northern states much aid and comfort, but it now seems as if the historic friendship might be broken at any moment over the very important question of the Manchurian situation. The diplomats of the four great countries vitally interested in the Manchurian question are at work, and for the next two months it is expected that the game of diplomacy will be played as it has been played for many years. The United States has a definite policy, so has Japan, so has England and Russia, and China looks on sullen and impatient, waiting for the great powers to say whether there shall be war or peace in the lands or on the seas that surround the country of the dragon.

Clark to Build a Palace.

Senator W. A. Clark of Montana is ambitious in numerous ways. The richest copper miner in the world, he is now planning to erect in this city a home for himself that will surpass in luxury and architectural adornment any private house in the country. Clark's millions have been turned over and over in their ceaseless earning of interest, so that he is wealthy beyond the dreams of avarice. He has had little chance to tell, except in an indirect way, how much he is really worth. The senator, however, does nothing upon a small scale. He is a little man with Titian ideas, and he has therefore decided to erect here the grandest mansion ever contemplated for the continent, and one that will entirely eclipse his own palatial residence, just completed, in New York. Two firms of world-famous architects, one in Paris and the other in London, are said to be preparing competitive plans for the new palace of the Montana senator. When these are submitted to him, Mr. Clark will call for revised plans, should any details of the one rejected seem worthy of inclusion in the one approved. The plans for Mr. Clark's prospective residence are reported to contemplate a square of about 100 feet on each side, with a central hall and a series of wings extending from the central hall around the Dupont circle concave front around Massachusetts avenue and including the site of the house now occupied by Mr. Clark at the Twentieth street corner. This would give the Montana senator a ground area far greater than the most fortunate neighbors, including the Colorado millionaire, Thomas F. Walsh; Lars Anderson, also the possessor of millions; Levi Z. Leiter, the father of Lady Curzon, wife of the viceroy of India; the Townsends, and Mr. Patterson, the editor of the Chicago Tribune, who married the daughter of Joseph Smith.

With Senator Clark's elevation to a place on the foreign relations committee of the senate the Montana copper king has decided that in order to properly entertain the diplomatic corps it will be necessary for him to erect a mansion in Washington that shall stand absolutely in a class by itself, unapproached by the residence of any other man. Senator Clark is a connoisseur of art and of books, and is expected when the plans for his Washington home are accepted that he will have a disposition to have the most famous show houses of the nation's capital.

Cities that Want Conventions.

Politicians in Washington and notwithstanding the summer heat there are quite a number of them hereabouts—are already discussing the places in which the republican and democratic conventions will meet next year. It is understood that St. Louis will be a formidable competitor for convention honors. Baltimore, too, will enter the race for both conventions, now that it has a magnificent new armory capable of seating 25,000 people. Among the leaders, however, there is a disposition to have the republican convention meet in Chicago,

although it is not understood that Chicago cares particularly for this honor. There is some quiet talk of Omaha entering the race for the republican convention, but so far as can be learned only quiet talk has been indulged in so far as Omaha is concerned. The politicians have no desire to go to St. Louis. They say that with the exposition on St. Louis will be taxed to the uttermost to take care of the exposition visitors alone, without taking anything additional upon their hands like convention crowds. The hotels in Chicago during the summertime are but ordinarily filled, and as the Windy City has splendid facilities for taking care of convention crowds it seems reasonable to predict that the city by Lake Michigan will once more entertain the national republican convention and again have the honor of nominating a winning ticket.

Irrigators Plan a Trip.

About thirty Washington correspondents, representing the interests of the country, will attend the National Irrigation Congress to be held at Ogden, September 15 and 16, as the guests of the Union Pacific Railway company. The details of the trip west, which contemplates a twenty-day visit to the most interesting places in the intermountain states, are in the hands of representatives of the land department of the Overland road. While the itinerary is still in a nebulous condition, progress upon it has gone so far as to show that the correspondents will go by way of Chicago and Kansas City to Denver, stopping at the new experiment station at Irwin City, Kan., enroute. Three days will be given to Colorado and the most interesting features of the Centennial state. Cripple Creek, Greeley, Manitou, Colorado Springs and the Rocky Ford irrigation district will be investigated, together with the sugar beet factory in that state. A short stop will be made at representatives of the land department of the Overland road. Three days will be given to Colorado and the most interesting features of the Centennial state. Cripple Creek, Greeley, Manitou, Colorado Springs and the Rocky Ford irrigation district will be investigated, together with the sugar beet factory in that state. A short stop will be made at representatives of the land department of the Overland road. While the itinerary is still in a nebulous condition, progress upon it has gone so far as to show that the correspondents will go by way of Chicago and Kansas City to Denver, stopping at the new experiment station at Irwin City, Kan., enroute.
