Consumption Greatly Increases.

In order to show how our coal mining industry indicates the great strides that we have made in manufactures we may compare the statistics of coal production with those of our population. If coal mined in the United States during the past thirty years had merely kept pace with our increasing population the production in 1901 would have been considerably less than 190,090,090 tons, whereas it reached nearly 200,090,000 tons. In 1870 we had a population of 38,558,371 persons, and our total coal production amounted to 39,595,590 tons, showing a per capita consumption of less than one ton. In 1850, with a population of a little over 50,000,000, we produced 71,481,369 tons of coal, or one ton and 390 pounds for each inhabitant. At the end of the next decade our population had increased to 62,622,550, and our coal production to nearly 158,000,000 tons, making two and a half tons of coal to each person, and in the last year of the last century, when our population was a little over 76,500,000, we mined nearly 270,000,000 tons of coal, or more than three and a half tons per capita. In other words, while our population in 1900 was not quite double that of 1870, the coal production was 7.4 times as large.

It is out just that an industry upon which

double that of 1870, the coal production was 7.4 times as large.

It is but just that an industry upon which so many other industries, we might say the commercial life of the nation itself, depends, should have proper representation at the Bt. Louis exposition. A large space has been reserved in the Mines and Metallurgy building for the display of the exhibits representing the coal mining industry. This will be divided among the states according to the extent of their exhibits and as nearly as possible according to geographical location.

Other addresses of the afternoon session were by C. W. Merrill of Lead, on "The Metallurgy of Homestake Ores," and by

Metallurgy of Homestake Ores," and by C. C. O'Harra of Rapid City, on "Geology and Mineralogy of the Black Hills," which was illustrated by charts and maps

John L. Webster's Address. The chief feature of the e entry ses

In part:

"Money, which represents the prose, of life, and which is hardly spoken of in partiors without an apology, is in its effects and laws as beautiful as roses." So said the American philosophical seer of a generation ago, Ralph Waide Emerson. It has been said that the love of money is the root of all evil. But one who has deeply studied the history of civilization, and whose writings are recognized as standard everywhere, Henry Thomas Buckle, said that "after the love of knowledge there is no one passion which has done so much good to mankind as the love of money."

Wealth is power. Gold is the standard of its measurement. Comforts and luxuries are its attendants; supremacy in trade and commerce its achievement. Wherever there is found a wealthy nation, there is progress and advancement. Such ierever there is found a wealthy nation, fe is progress and advancement. Such the United States with her ninety-four lons of wealth, and countless gold in treasury. One of her chief sources of urity is the money metals buried in her untains, which the energy and toil of industrious and venturesome men are by bringing forth, to enrich the people to make possible further resulting levements for the betterment of manda.

kind.

Gold discoveries are the advance guards of civilization. They are attended by phenomenal tides of emigration. Multitudes of people of all classes and all languages, in all countries and in all ages, have left their old homes and wandered, amid hardships and dangers, over lands and over seas to the uttermost parts of the earth where the money metals have been found. In their zeal, when necessary, the sword has made the roodway against resisting forces. They have carried on devastating and merciless wars against tynorant and semi-barbarous peoples, dignified by historians under the name of conquests.

To us, as citzens of the United States, the discovery of gold in California presents a more interesting series of social and political events and more wonderful material and industrial changes. In the colonial period of our history the money, metals were scarce. The cheap and bulky and inconvenient devices at times resorted to to represent money made trade difficult and commerce almost impossible. It seems surprising to us now, but was strange then, that such statesmen as Edmund Randolph, James Madison and John Dickinson suggested to the federal convention in 1787 to insert a clause in the constitution to measure the salaries of the president and senators by the value of so many bushels of wheat. From that period to the discovery of gold in Calfornia in 1847, a period of sixty years, the aggregate output of gold in the United States was limited to \$24,600,000, and the growth of the population from about 5,000,000.

From Jamestown to Plymouth in 1847—

20,000,000.

From Jamestown to Plymouth in 1847—
from the Atlantic seaboard to the Missouri
river—marked the limit of the progress of
our people through a period covering more
than two centuries of time. After 1847,
when Marshall had discovered the glittering dust in the raceway of Sutter's mill—

DOCTOR SAID

An Illinoisan who has been through the mill says: "Last spring I was so bad with indigestion I could not digest even cooked eggs, and doctor said I must eat predigested food and prescribed Grape-I changed for the better before I

out pig iron equal in amount to that produced in all the other countries of the world in a similar period for 1901.7 This great development is due in large part to coal. Our vast deposits of iron ore would ile unprospected and undeveloped but for the coal which reduces them to workable iron and steel. Without the coal the steel would not be made for our railroads, nor would there be the iccomotives to draw the trains. It is coal which moves the world today, not gold. Gold lubricates the world today and that is very important, I grant you, but coal makes the power.

Consumption Greatly increases.

In order to show how our coal mining industry indicates the great strides that we have made in manufactures we may compare the statistics of coal production with those of our population. If coal mined in the United States during the past thirty years had merely kept pace with our increasing population the production in 1901, 900,000 tons. In 1870 we had a population of less than one ton. In 1880, with a population of less than one ton. In 1880, with a population of a little over \$0,000,000, we produced 7, \$43.536 tons of coal, or one ton and \$90 pounds for each inhabitant. At the end of the next decade our population had increased to \$2,522,500.

men believed that savery and nature were at war, and in 1850 brought California into the union as a free state. The equilibrium between the north and south, between the free states and the slave states, which the southern statesmen had so long endeav-ored to preserve, was thus forever broken. Changes After California Discovery, Then followed a chain of resulting cir-

Changes Afrec California Discovery.

Then followed a chain of resulting circumstances, in every link of which may be considered the followed searchers for the money metals had directly or indirectly put in melion, and which coupled with American high ideals of citizensilp, worked out wonderful results for the betterment of humanity and the strengthening of the union.

Another Christian was killed yesterday, the Turkish solders making common cause with the Mussulmana during the attack on christians. A number of houses have been pillaged, one French shop was completely destroyed and the French resident are been pillaged, one French shop was completely destroyed and the French resident are been pillaged, one French shop was completely destroyed and the French resident are been pillaged, one French shop was completely destroyed and the French resident are been pillaged, one French shop was completely destroyed and the French resident in the strength of the union and have abandoned their houses have been pillaged, one French shop was completely destroyed and the French resident shop been properly and the repeal of salve territory and the repeal of south threw down the saunties and tought a political duel for the possession of Kansasa. The lovers of manhood rights, from New England to the mining camps of the west, joined hands in the struggle. Higher lideals of citizenship sagnin prevaled and The political strike now assumed national proportions. The democratic convention at Charleston witnessed the wrecking of that party over the slavery question and which split it assuder on sectional lines, and throbbing hearts warmly greated in the south was alarmed and doubted and republicant previous the portion of the capitol announcing an administrative policy of union and love. But the south was alarmed and doubted and refused the south was ala

Opening of Other Countries.

chords of memory" now "swell the chorus of the union."

Opening of Other Countries.

It was a miner, who had had experience in California, who first discovered gold in Australia in 1851, and thence followed that immigration that brought that far-off island continent under the white man's civilization and made it valuable as a province or a federation under the British dominion.

We will not stop to speak of British Columbia or Nova Scotia or Mexico or Central or South America, for they are of but passing interest when compared with the zeal that bordered on frenzy. that induced men to face cold and pestilents and hunger under the magnetic attraction of gold hunting through the desolate regions to he Klondike in 1856, and the barrenness of Nome in 1898. Had it not been for the gand discovery of the money metals, Australia would probably have remained for many generations an unprogressive retreat for pastoral settlers and exiled convicts, and Alaska an unexplored region for the wandering Indians and her Ocean waters the playeround for the seals.

A transformation is going on in Africa, more slowly but little less remarkable than that which went on in America from the days of the disappearance of the Azico races to the founding of an American republic. Between the days when we used to read of the explorations of Livingstone and Stanley in "Darkeet Africa." and the year of 1588, when sixty milliens of gold was taken from the "Rand," the gloom of obscurity was lifted from that southern continent. America with its transcontinental railways from St. Petersburg to Vieldvestok will de for these countries what the building of the Union Facilia did for the western half of America. The north of Asia, will soon have a new awakening. The empire of Russis, whose population in a century has grown from 30,00,000 to 140,000,000 people, is becoming a power in the world's controversies. Her civilization may be medieval and her industrial system may be archisic but has described and consulted in every movement in the Octent. Her fu

that will be found in Asia will be the compoulens of civilization in these prograssive movements of the human race.

Fut here again our thoushts are irrester, they drawn to the west of our country. The bosen that washes our western shores reaches to the east coast line of the Orient, connecting the newest of the new world with the oldest of the old. When we shall have more American ships upon this western sea and a larger mingling of American golden civilization with the Moneolian races, the commercial tonuage that will be floated on the waters of the Pacific shall surners in value and abundance the transportation across the Atlantic.

More Than Mere Wesith.

More Than Mere Wealth.

Note I changed for the better before I had used one package, eating it three times a day.

"My improvement on Grape-Nuts food was se wonderful that I concluded to use your food drink, Postum, in place of tea, and, to make a long story short, I have not been without Grape-Nuts and Postum since, and my present health proves my dector's wisdom in prescribing Grape-Nuts. I have got strong as a horse and well and I owe it all to your delicious food and Postum." Name given by Postum Co., Battle Creek, Mich.

In the making of Grape-Nuts food all the indigestible starches of the grain are transformed into Post sugar. Every particle of Grape-Nuts is digestible in the weakest stomach. Physicians have never found a stomach too weak to digast and assimilate it.

Look in each package for a copy of the famous little book, "The Road to Wall-villa"

More Than Mere Wealth.

But there is more in the civilization of the west than the mere search for gain or the conquest of wealth. There are in the conquest of wealth and refer of our west. May I not berrow the words apole net and all that I believe as to the function of the words apole networks ago of use of cur west. May I not berrow the words apole networks ago of the words apole networks and our chiefers as their progressive spirit. I deals of life as characteristic of the people as Is their progressive spirit. I

and broadening the lives and work of men, which is the distinguishing feature of American national life.

But I would commend to our eastern friends the reading of the following statement from John Morley, "Great sconomic and social forces flow with a tidal sweep over communities that are bnly half conscious of that which is befalling them. Wise statesmen are those who foresee what time is thus bringing, and endeavor to shape institutions and to moid men's thoughts and purpose in accordance with the change that is silently surrounding soldier. Fires at a Proview and to

when he wrote those sentences, but housely they fit the changes that the west !

when he wrote those sentences, but how aptly they fit the changes that the west is vigorously, actively and surely working in the social, political, industrial send commostical conditions of the United States. I wish I could have our eastern friends understand how boundless are the opportunities, how measureless are the resources in that area of country between the Missouri river and the Pacific, and how enterprising and progressive the people that built up the empire of the west since the discovery of gold in California.

Decades in the life of a nation are as nothing. This republic, grand and glorious as she is, has just started on her career. The future before her is vast, dim and immeasurable. "Nature is omnipotent, nations must float with the tide." But whether she is passing through the darkness and storms of uncertain conflicts, or moving under all the splendor of the golden sunshine of peace and prosperity, the west and the east shall be forever one.
