GREAT WOOL MARKET OF WEST

Sheep Raising in Montana Presents Many Interesting Phases.

WOOL GROWER HAS TROUBLES OF HIS OWN

Deals with Lambing and Shearing Crews, Herders and Freighters, Wool Buyers and Mutton Markers and Fights Cattlemen.

The wool markets of Great Falls and Bil ngs, Mont., opened this year on July 6 nd continued in operation until the las week of August. In that time 9,232,000 of wool were sold at Great Falls which, in 1902, proved itself the greatest sal market of the world, with Billings a second. This season, however, alsh it is too early for official return be made in detail, it is estimated that dillings marketed a trifle more than 10,000, 90 pounds of wool. As high as 17% cents ind was paid for the clean long staple rticle, while the average price obtained in cte two great markets was 16.12 cents were other marketing centers, less naterially to the impressive total output r Montana of 37,500,000 pounds. In recent ears Montana has become the leading woo state of the union, producing 29,796,989 pounds in 1901, and more than \$3,000,000 sounds in 1902. The season just closed naintains the rapid pace of increase, with nearly 12 per cent better showing than last year. Among the minor markets, with new cords for this season, were Miles City 4,000,000 pounds: Dillon, 1,500,000 pounds, and Bigtimber, 1,250,600 pounds. Fergus county second among the sheep countles of Mon tana, has been opened as a wool market by the operation of the Lewiston railroad. and the industry is, "on the jump as never ofore," to use the words of the wool men The average price received this season is the highest in four years and will bring into the state \$5,000,000, in round numbers The Billings wool market had a longer ession than its rival at Great Falls, because of the late arrival of the wool from he northern growers, and for this reason the returns were not in quite as early.

As there is no scouring plant in the state, the sheepmen last year paid freight to Boston and Philadelphia on over 25,000,000 pounds of dirt and grease, and several milion pounds more this season, the shrinkage in scouring having been 63 per cent, and the scoured wool selling at 47 cents per pound. Investors will recognize in these figures the saving that might be made in the Missouri river, at Great Falls, and of appoint sales days on which the growers

Sheep raising in Montana presents many they are willing to pay per pound for each ing to deal with lambing crews and shearing crews, herders and freighters, wool following morning a slate shows the sales buyers and mutton markets, and often to of the day previous as made to the highest battle with cattlemen for possession of the bidders. Should the samples not have been range. The herder must not be too energetic lest he wear the sheep out with continued running, or he himself go crazy through enforced idleness. He must be up be had on the grower, but the following with the sun and soon release his restless flocks from their wolf-proof pens. Then with his dogs he must take his 2,500 or 3,000 sheep to fresh ranges, feeding leisurely as they go. He must know the potsonous weeds and carefully avoid them, as the ally remaining intact, is spread out on a sheep do not discriminate, and the care-table, and perhaps six different lengths and the schools of Chicago will gradually tend to make them more sedate. The premediof the day all rest, each animal hanging his head in the shade of another, and the herder usually carrying an umbrella and weekly.

grades and quantities of the year's crop as are best suited to their needs.—Collier's humored youth.

The bits of loc squito netting for his own protection It is then that the more energetic herders busy themselves by gathering the loose stones and erecting monuments that are seen on high places throughout the west Kuhn & Co. and southwest, and excite the curiosity of

strangers in the land. In the summer time the sheep are herded CLEVER BIT OF ENGINEERING out into the foothills, perhaps fifteen or twenty miles from the home ranch, the range and pastures near by being saved for winter's use and for lambing and shearing time. In case of severe storms In winter the herder has not far to go and can seen comfortably shelter his flocks and feed them from his stacks of wild hay and alfalfa. If caught out by late storms, as that of May last, when occurred the heaviest snowfall ever recorded in Montana, there is no telling what the result be. The temperature was then slightly above freezing, with continuous snowfall for several days. The sheep and herders became wet through and chilled to the marrow, many perishing, not from

freezing, but from chills. It is at such times that the herder needs to be energetic and act with good judgment, many having given up their lives in a vain effort to pick their way through the blinding storm and to lead their flocks to places of safety, while others, forsaking all, were even then unable to save themselves. The faithful collie alone may have found his way back to camp to direct a rescuing party to where his master had fallen, or, faithful unto the end, he may have waited in vain for his master to awaken and direct him in his work. This storm was particularly trying, coming as it did in the midst of lambing season, when neither the young nor the old ewes were in fit condition to withstand it. Elecrical storms are also dangerous, the lightning seeming to be attracted by the sheep, and to strike down the herders who may be standing on high places.

Extra Help During Lambing Season. Extra help is needed in May and early lune during lambing season, when the
