ROME, Dec. 5.—(New York World Cablegram-Special Telegram.)—When Dr. Di Eulafay mounted the platform at this week's meeting of the Academy of Medicine to report on his experience with the serum discovered by Dr. Marmorek, he probably sounded the knell of this much vaunted cure for tuberculosis.

The distinguished members of the academy, necessarily the best physicians and surgeons in France, were immensely interested and awaited with impatience Dr. Eulafay's report. It touched the deep chords of the audience, for the disease of tuberculosis in the Hotel Dieu (hospital) treated by Marmorek's serum, which was carried out by the academy's request, five died. Dr. Eulafay's report, which was carried out by the academy's request, five died. Dr. Eulafay's report, which was carried out by the academy's request, five died.

Dr. Marmorek received the World correspondent today. "There can be no slight question of the good faith of any of my conferees," said the doctor. "But it is due to myself to say that my serum has not yet had a fair chance to prove its value. It has been experimented with only seven months. From among Dr. Di Eulafay's patients I purposely chose the most desperate cases where all hope of cure had been abandoned. With them it was merely the question if amelioration of their condition was possible, and they were not instances by which to measure the future of the serum."

At the correspondent's request Dr. Marmorek proceeded to differentiate between his method of treating tuberculosis and that of Dr. Koch. "Koch took a certain poison, tuberculin, and applied it to the human body, with resulting reaction and fever," said the earnest physician. "I take another poison, a new one, not tuberculin, and first inject it into a horse. I so obtain a new antitoxin, a serum which when injected into the human body causes great benefit in tuberculosis, without reaction or fever."

For example, the second son of the prince of Pleas, 55 years old, was given up as lost from consumption, but my serum cured him, and he is now making a pleasure trip in Egypt. In many cases I have effected remarkable cures. But my serum is not the earnest physician. "I take another poison, a new one, not tuberculin, and first inject it into a horse. I so obtain a new antitoxin, a serum which when injected into the human body causes great benefit in tuberculosis, without reaction or fever."

SAYS SERUM IS VALUELESS
Noted French Doctor Has No Faith in Marmorek's Consumption Cure.

(Copyright, 1903, by Press Publishing Co.)
PARIS, Dec. 5.—(New York World Cablegram-Special Telegram.)—When Dr. Di Eulafay mounted the platform at this week's meeting of the Academy of Medicine to report on his experience with the serum discovered by Dr. Marmorek, he probably sounded the knell of this much vaunted cure for tuberculosis.

The distinguished members of the academy, necessarily the best physicians and surgeons in France, were immensely interested and awaited with impatience Dr. Eulafay's report. MATCH NOT FAVORED
Son of Grand Duke Vladimir Has Difficulties in His Matrimonial Path.

(Copyright, 1903, by Press Publishing Co.)
LONDON, Dec. 5.—(New York World Cablegram-Special Telegram.)—The arrival in London of the Grand Duke and Grand Duchess Vladimir of Russia is said to be in connection with their son Cyril's betrothal to King Edward's niece, the divorced grand duchess of Hesse, Princess Victoria Melita of Saxe-Coburg. Cyril is their eldest son and has a possibility of coming to the Russian throne, as his father is the next in succession after the heir apparent (who at present is unmarried), and his marriage with Princess Victoria is not regarded in an especially favorable light at the Russian court.

The grand duke of Hesse has a powerful friend in his sister, the carina, and she has taken her brother's part in the whole affair. Grand Duke Cyril, like his brother, Boris, who visited America, is very fond of society. He is the best dancer in the Russian court and got up the fancy dress balls which have made the Vladimir palace in St. Petersburg famous for its gaiety. Cyril has a smooth face and fluffy hair. At one ball he appeared as a girl and was not detected. His mother is still considered one of the beauties at the Russian court, though she is a grandmother. She is very democratic for a Russian grand duchess and has even gone so far as to invite to her house the wife of Minister Witte, who was known before her marriage among the gilded youth of St. Petersburg as "La Belle Matilde." Mme. Witte has never appeared at court and the Grand Duchess Vladimir is not a member of the imperial family who has recognized her. Both the grand duke and the grand duchess are easy-going people who devote most of their time to pleasure, and they do not relish having a daughter-in-law who may give them trouble. They had too much trouble with their own daughter, Helen, before she married the son of the king of Greece. Among her other achievements she blinded her governess for life by throwing vitriol at her one day when the governess had made her angry. Her parents had to give the woman a handsome pension.

Prospective Bride is the Niece of King Edward and British Sovereign Will Probably Be Asked to Interpose.

(Copyright, 1903, by Press Publishing Co.)
LONDON, Dec. 5.—(New York World Cablegram-Special Telegram.)—The arrival in London of the Grand Duke and Grand Duchess Vladimir of Russia is said to be in connection with their son Cyril's betrothal to King Edward's niece, the divorced grand duchess of Hesse, Princess Victoria Melita of Saxe-Coburg. Cyril is their eldest son and has a possibility of coming to the Russian throne, as his father is the next in succession after the heir apparent (who at present is unmarried), and his marriage with Princess Victoria is not regarded in an especially favorable light at the Russian court.

The grand duke of Hesse has a powerful friend in his sister, the carina, and she has taken her brother's part in the whole affair. Grand Duke Cyril, like his brother, Boris, who visited America, is very fond of society. He is the best dancer in the Russian court and got up the fancy dress balls which have made the Vladimir palace in St. Petersburg famous for its gaiety. Cyril has a smooth face and fluffy hair. At one ball he appeared as a girl and was not detected. His mother is still considered one of the beauties at the Russian court, though she is a grandmother. She is very democratic for a Russian grand duchess and has even gone so far as to invite to her house the wife of Minister Witte, who was known before her marriage among the gilded youth of St. Petersburg as "La Belle Matilde." Mme. Witte has never appeared at court and the Grand Duchess Vladimir is not a member of the imperial family who has recognized her. Both the grand duke and the grand duchess are easy-going people who devote most of their time to pleasure, and they do not relish having a daughter-in-law who may give them trouble. They had too much trouble with their own daughter, Helen, before she married the son of the king of Greece. Among her other achievements she blinded her governess for life by throwing vitriol at her one day when the governess had made her angry. Her parents had to give the woman a handsome pension.

SENDS SNAKES TO HER RIVAL
Fortunately the Reptiles Were Torpid from Cold and Did No Harm.

(Copyright, 1903, by Press Publishing Co.)
PARIS, Dec. 5.—(New York World Cablegram-Special Telegram.)—The remarkable stratagem of a jealous wife seeking revenge stirred up Paris this week. Baroness Pongnet formed an intimate friendship with a Parisienne in Rome last winter and, coming to Paris, renewed the acquaintance. But she soon discovered that her husband greatly admired the Parisienne. One day at luncheon in a fashionable restaurant the husband inadvertently allowed his manner to show undue familiarity with his wife's friend. The baroness pretended to notice nothing, but soon afterward she induced the Parisienne's maid to hand to her mistress a letter from the baron in which he promised the Parisienne a pearl necklace. Two days later the wife sent an elegant casket to her perfidious friend. Thinking the baroness had promised her a necklace, the Parisienne opened the casket and found To her horror she crawled two vipers of a deadly poisonous breed. The woman fainted, but the reptiles crawled toward the fire to warm themselves without attacking her. Accompanying the serpents was a note which said: "When you read this letter the vipers, I hope, have been poisoned by you. This is the necklace which is offered to you by the baroness P. Police interference was invoked, but the baroness and her husband were allowed to depart for Rome without prosecution.

SOCIETY ALL JOINS IN HUNT
Duchess of Marlborough the Central Figure of a Distinguished Party.

(Copyright, 1903, by Press Publishing Co.)
VIENNA, Dec. 5.—(New York World Cablegram-Special Telegram.)—The duchess of Marlborough and her sister-in-law, Lady Nora Churchill, have just left Vienna to join a very lively party at Sorokufkuf, Count Paul Szapary's magnificent hunting lodge in Hungary. There the elite of Vienna's court society is gathered, including Duke Miguel of Braganza, Prince and Princess Carl of Furstenberg, Count and Countess August Potocki, Count Eugene Zichy, Marquis Villaveja, Count Pestetics and George Nagelmackers.

The festivities will close with a grand ball and banquet given by the Hungarian Park club solely in honor of the duchess of Marlborough. She has been benefited by Dr. Jelder Muller's treatment for deafness, but must come again to Vienna before a cure is assured. She has been treated royally by the greatest Austro-Hungarian aristocratic families. When she did not dine out she generally had small parties at the beautifully decorated restaurant of the Hotel Bristol. In the evening she generally went to the theater. She occupied the so-called princely apartment of the hotel, which is very spacious and splendidly furnished. She dresses most becomingly, in the latest fashion, and the society women who dine at the hotel go for 5 o'clock tea consider her quite the standard of good taste.

NEW BOARDING SCHOOL IN PARIS
Idea is to Give Girls More Freedom Than Has Been Custom in the Past.

(Copyright, 1903, by Press Publishing Co.)
PARIS, Dec. 5.—(New York World Cablegram-Special Telegram.)—An English boarding school has just been established in Autueil, the suburb of Paris most affected as a residence quarter by rich English and American families. Its aim is to give English girls a knowledge of France, its language, art, etc., and let them have all the freedom they would have in a school in their own country. Of course, the direction of such a school is striking contrast with the "pensionnaires" of Paris, where the girls are not permitted to take a step outside the school grounds without a suspicious duenna at their heels. These English girls go in parties to the Bois de Boulogne, which is quite near, to bicycle or to play tennis. They are sometimes seen, too, in the heart of Paris, in parties seeing the sights or going to church.

The chief end of the school is to acquaint them with the best side of French life. They have lessons in dancing, fencing, gymnastics and cooking. Most of them come to Paris to finish their education. The rudiments have been acquired in England and it is a wish that their cosmopolitan ideas of life that induce their parents to send them to this school.

MUSIC CURES A SICK HORSE
Trainer Tries It After All Resorts to Medicines Had Failed Utterly.

(Copyright, 1903, by Press Publishing Co.)
LONDON, Dec. 5.—(New York World Cablegram-Special Telegram.)—Pire Island, a valuable English race horse, has just given a most remarkable proof of the healing powers of music. He lost his appetite and refused to train—a condition of affairs that drove his trainer and jockey to distraction. All manner of remedies were resorted to without avail, till the happy idea occurred to them to place a music box in his stall. Twice a day a string of dances and "God-Save-the-King" airs regaled the equine ears.

The effect was marvelous. The horse regained his spirits and the trainer and jockey had no further trouble. Whether the horse had had any previous circus afflictions determines his musical taste is not stated.
