A furnace set properly with just the right amount of cold air and with pipes covered with asbestos and body of furnace covered (we don't mean covered so that you cannot see the tin), but covered in the way we cover them. Such a furnace will be a source of comfort and economy. We know by experience that the same furnace poorly set and poorly covered will cost you from \$25 to \$60 more for fuel each year and give from 40 to 60 per cent less heat than the same furnace properly protected. We have examined many furnaces and candidly told the people that their furnace men did them a good job. We have reset and recovered many furnaces put in by inexperienced men and our customers could hardly believe that they were using their old furnace. It costs you nothing for us to look into the matter for you.
