distance from the planet was 15 minutes of arc.

Its motion is carrying it southeasterly at the rate of 1 minute per day. Its apparent motion around Jupiter is in the direction that astronomers would describe as direct. The apparent motion of the sixth satellite, on the contary, is in the reverse direction. Whether these satellites are actually revolving around Jupiter in the same direction as the five inner satellites or in the opposite direction cannot be stated now. It is certain, however, that the planes of their orbits make a considerable angle with each other and that they make large angles with the plane of Jupiter's equistor. The distances of the two satellites from Jupiter are not very unequal, in both cases, both lying within six and elsh millions of miles. Their corresponding periods of revolution around the planet would therefore be seven or eight months in each case. These two satellites promise to be amoing the meet interesting bodies in our entire solar system.

(From a Staff Correspondent.) LINCOLN, Feb. 27.-(Special Telegram.)-Representative Lee of Douglas this afternoon introduced a bill to provide for the consolidation of Omaha and South Omaha. It provides for the union on petition of 20 per cent of the voters of the two cities and ratification at the polls by a majority.

The entire delegation from Douglas has displayed a friendly attitude toward the principle of consolidation. They have varying ideas as to how the merger should be brought about, but all seem to agree that such a union would be a good thing if a majority of the voters of the cities favor it. "I am in favor of consolidation of the two cities whenever a majority of the voters there want it," said Representative Clarke.
