HOGS-For a Saturday there was a very decent run of hogs, 119 fresh care being reported in. The total for the week shows a slight falling off, as compared with last week, but a heavy gain over a year ago. In 1set, the receipts this week are more than double what they were for the corresponding week of last year.

Conditions were generally in relieve favor this morning and every one started out asking considerably more money for his holdings. While buyers were a little slow at first about putting off the market was reasonably active when the trade was once under way, with values generally a big 5c higher than yesterday. The hogs sold largely at \$3.8005.5%, as against \$5.8346 5.876, yesterday. The top, \$6.00, was 5c higher than the best price yesterday.

This has been a great week to the sellers of hogs, as everything had been coming their way. At the opening the hogs sold in identically the same notches as at the close of the previous week. Furing the next three days values advanced rapidly and after a slight reaction of Friday were still decidedly higher than at the beginning of the week. With the advance today the market is an even 20c higher than it was at the close of last week. While the average price at which hogs were selling today is just about \$5.90, one year ago \$6.00, three years ago \$7.40. The last mentioned price was the highest at which hogs have sold on this market during the month of February since 1851, when they averaged \$1.19 on the 17th of the month.

MACHINE TO HANG PAPER

Pastes and Applies Caper to the Wall as it Inwinds-How it Works.

The latest movely in the line of inven-tions is a machine invented by an Ohl-man for hanging wallsuper. This machine poster the paper as it is unwound from the roll and applies it in its proper place upon the wall. The several parts are arranged within a frame, which is pivotally supported at one end of a handle. A paste tank containing a rotter is secured in the center of the frame. Adjacent to the pasts roller is a brush which spreads the paste evenly over the paper.

After leaving the pasts roller the paper is carried to padded rollers, which presthe paper upon the wall. In using this machine the paste tank in the center is removed and filled with paste. It is then replaced within the frame, the roll of pane to be hung mounted on the rod directly front of the paste tank. The paper is then carried over the paste roller and brought in contact with the paste brush. From here it continues on over the two rollers at the top of the muchlus and applied by rolling the machine across the celling. This movement causes the top roller to press the paper firmly against the ceiling.

After the paper has been applied the full length of the ceiling it can be quickly ent by pulling on a cord which operates a revolving knife, the exact length of the paper still required being determined by a guide at the front of the machine. When applying paper to the side walls of a room the paper is earried over the top roller to the front roller and the handle switcher
