AFFAIRS AT SOUTH OMAHA

City Council Names Judges and Clerks for the Coming Election.

STUDENTS TO VISIT PACKING HOUSES

Two Hundred from Agricultural Department Follow Shipment of Stock from the State Farm.

There was a called session of the city council yesterday at noon. The object of the meeting was the appointment of the judges and clerks of election. These will serve at the primaries which are to be held March 5. There was no other item of business before the meeting, although it was expected the general bills for the month of February would be allowed. Following is the list of appointments for the various polling places of the city:

First ward: First precinct—Clerks, William Hutzky, Frank Fitzsimmons; Judges, G. W. Howe, Lewis Landon, James Grace. Second precinct—Clerks, Al Keenan, Charles Mann; Judges, Floyd McKay, Jim D. Jones, E. C. Burson. Third ward: First precinct—Clerks, Charles Knight, Andy McGuire; Judges, Mike Callahan, Robert Rasmussen, John Quinlan. Second precinct—Clerks, T. H. Lott, George Byrnes, Ed Hanlon. Henry Ryan, George Byrnes, Ed Hanlon. Fourth ward: First precinct—Clerks, T. C. Sherman, Peter Thompson; Judges, F. A. Burk, J. A. Nelson, V. A. Palmer. Second precinct—Clerks, T. G. Irwin, James Murphy; Judges, John O'Neil, John Irwin, James Murphy. Fifth ward: First precinct—Clerks, Paul Burge, B. W. Williams; Judges, Mike Brennan, William Welsh, John Elliott. Second precinct—Clerks, George Nice, F. Peterson;

Judges, Samuel Williams, John Hannigan, G. Casper, Jr. Sixth ward: First precinct—Clerks, T. G. Irwin, George Byrnes; Judges, W. H. Murray, George Byrnes, Julius Carlson. Second precinct—Clerks, E. C. Moore, J. J. Kinsinger; Judges, P. O'Connor, R. McGinnis, Julius Rotholz.

Bold Theft of a Cow.

Ed Hanley, Thirty-second and T streets, is much exercised over the loss of a cow which was taken from his premises last Tuesday. He has been in the habit of leaving the cow staked out. Tuesday some one came along in broad daylight, pulled up the stake and led the cow away. Some of the neighbors saw the man leading the cow away, but supposed that Hanley had disposed of it. The police were able to trace the cow west to Fortieth street and there the man apparently turned toward the north. It is likely that he led the cow north to the north side of the stock yards and sold her. The police have a description of the cow and the man who was seen leading it. Neither have been seen since Tuesday. Chief Briggs hopes that any party who has seen a red cow with a white blanket will send information to the police station.

Disorderly Resorts Must Move.

In accordance with the orders of the Board of Fire and Police Commissioners, which were issued to the women of scarlet in the lower districts, there was a decided move in the part of the police beginning yesterday to rid the town of their presence. The existence of the houses has long been known; but as they were mostly in inconspicuous parts of Railroad avenue, no general move was made to rout them out. But with the building of the new freight depot and the removal of other buildings, it was thought necessary to rid the streets of the whole class. They were given orders to vacate before March 1. Most of them moved out, but there remained a few in violation of the orders. The police arrested them yesterday afternoon. They may arrest more before the district is cleared.

Students to Visit Packing Houses.

About 200 students will be in town today. They are from the Nebraska State university department of agriculture. They expect to investigate the workings of the South Omaha packing houses and will begin on the first plant. There has been a consignment of newly bred cattle sent there from the farm connected with the school of agriculture and these will be killed, and in the killing the packers will exhibit their methods to the students. The students come by a special excursion and will be accompanied by their instructors. Desk room for rent in Bee office, city hall building, South Omaha.

Magie City Gossip.

Mrs. P. McMahon is seriously sick. Mrs. McMahon is laid up at present with a strained back. There were forty-four births during the month of February. Desk room for rent in Bee office, city hall building, South Omaha. D. W. Stambaugh is reported seriously ill, though he is somewhat improved since Wednesday. Lewis Collins has returned from San Francisco where he has been for the last two months. Warren Wallace of Mount Pleasant, Ia., has been visiting with the family of William Barclay the past week. Mrs. T. M. Halloran and Mrs. Elmer Harding entertained the East Side Social club at the residence of Mrs. Harding. Jetter's Gold Top Beer delivered to all parts of the city. Telephone No. 8. The vice president and general manager of the National Packing company, L. B. Patterson of Chicago, is in the city to look over the work being done at the Hammond plant. W. E. Fennos spoke to the young men of South Omaha at the Ancient Order of United Workmen temple last night. There were nearly seventy present. The subject was "Winning the Game," and the speaker defined as the requirement of

AT THE PLAY HOUSES.

"Kerry Gow" at the Krug.

It's just a trifle awkward to think of Anybody but Joe Murphy in the role of Dan O'Hara. More than a generation of people have become accustomed to see that fine old Irish comedian in the part, but now his mantle has fallen on other, and apparently, worthy shoulders. Allen Doone, who has succeeded the veteran in the play that will never die, is a young man of attractive presence and manners, with a sweet voice, and he sings like a bird, while the barney rolls off his tongue as sweet as honey and as smooth as oil. It's a fine bit of a blacksmith he makes, and his romantic course through the play was warmly approved by a large audience at the Krug last night. Along with Mr. Doone's cast of supporting players, Miss Mary Fernier being charming Nora, and the others well fitted for the parts, "Kerry Gow" remains the rest of the week with a matinee on Saturday.

Like Bursting.

When your head feels like bursting, Dr. King's New Life Pills quickly cure the cause, constipation. 25c. For sale by Sherman & McConnell Drug Co.

TEACHING OF AGRICULTURE

School Superintendents' Association Endorses the Burkett-Pollard Bill.

LOUISVILLE, Ky., March 2.—The department of superintendence of the National Educational association closed a successful two days' convention late this afternoon with the adoption of important resolutions dealing with present day problems in education. Among the more important resolutions were the following: Endorsing the bill now before congress extending the franking privilege to state educational departments so as to cover the mailing of official reports and like documents; endorsing Secretary of Agriculture Wilson's recent report recommending the teaching of elementary agriculture in the schools and approving his request for an appropriation by congress of \$1,000,000 for the cost of an investigation of agricultural instruction in America and Europe; recommending that state normal schools give special attention to preparing teachers for instruction in manual, elementary agriculture and domestic science, and urging the passage of the Burkett-Pollard bill now before congress to cover the several states for that purpose; sympathizing with the fight now being waged against the pernicious influence of fraternalities and societies in secondary schools and declaring the same must be controlled or abolished; demanding increased salaries for school teachers generally, coupled with a system which will grade the pay and provide for promotion according to merit.

BARGAINS IN MEDICINE.

A woman once wrote us that she was not going to buy Scott's Emulsion any more because it cost too much. Said she could get some other emulsion for less money. Penny wise and pound foolish. Scott's Emulsion costs more because it is worth more—costs more to make. We could make Scott's Emulsion cost less by using less oil. Could take less care in making it, too. If we did, however, Scott's Emulsion wouldn't be the standard preparation of cod liver oil as it is today. SCOTT & BOWNE, 109 Pearl Street, New York

CULEBRA CUT A WONDER

Greatest Furrow in the Earth's Surface Ever Made by Human Industry.

The huge excavation for the Panama canal across the Culebra divide will be the greatest furrow in the earth's surface ever made by human agency. It is so large that the mind fails to grasp its real magnitude, and it can only be appreciated by comparison with some familiar object. A question of considerable interest recently raised by a correspondent relates to the largest existing artificial excavation which is at all comparable with the Culebra cut. Great amounts of excavation were done, of course, on such works as the North Sea canal, the Manchester canal and the Suez canal; but all these were built through comparatively level country. So far as we are able to find, the only deep cut at all comparable with that to be made through the Culebra divide is the great Nochiostongo cut through the hills which surround the valley of Mexico. This huge excavation was begun in 1640 for the purpose of affording an outlet to the flood waters which had inundated the City of Mexico and destroyed a great part of the city and its inhabitants. For more than 140 years labor on this great work was the chief task of the Mexican nation, and it was not until the year 1789 that it was finally completed. The total length of the Nochiostongo cut is 10,000 yards. Its greatest depth is 197 feet and its greatest width 281 feet. The total amount of material excavated was about 54,000,000 cubic yards. In comparison with this the cut at Culebra will have a considerably greater maximum depth and width, even for the project with the eighty-five-foot summit level. The total cube of excavation at the Culebra divide was estimated by Mr. John P. Wallace as 186,000,000 cubic yards for the sea level canal and 111,000,000 cubic yards for a canal with a sixty-foot summit level.

White in more size of excavation the cut through the Panama divide is by far the larger, the fact that the Nochiostongo cut was made with absolutely no aid from machinery or mechanical power, but wholly with human muscle, makes our task on the lathums seem like mere child's play in comparison with that accomplished by these patient toilers under the torrid sun of Mexico two centuries ago. When one recalls that this deep, artificial valley, more than twelve miles long, was all dug by the labor of Indians, who excavated the material with the crudest hand tools and

carried it in baskets on their heads to the place of final deposit, the great cut of the Pyramids of Egypt, among the world's greatest wonders—Engineering News.

GUN WITHOUT A RECOIL

Iowa Physician Thinks He Has Solved the Problem by a "Gas Muzzle."

In the Ninth Regiment armory, in West Fourteenth street, New York, there is an exhibition of a rapid firing gun known as "fool proof," because its inventor thinks it is impossible to put it out of order. It has an unusual feature, in that the gases from the exploding powder are not utilized to propel the projectile but are utilized to overcome the kick of the piece. The inventor of the gun is an Iowa physician, S. N. McClean.

McClellan's expensive and heavy machinery has been employed to take up this recoil. Water chambers, oil chambers and springs are among the device, but no one has utilized the power of the gun itself not only to check the recoil but to reload and fire the piece.

It was estimated that with every one pound gun an energy of 150 pounds to the square inch is expended, of which only a little more than six pounds is used in firing the projectile. All the rest is waste. Dr. McClean's device to use this waste is what is known as a "gas muzzle" to be fastened on the forward end of the gun. In effect it takes up the power of the waste gases and exerts a forward pulling force as the projectile passes out.

The doctor also planned to use some of the gases to reload and fire the gun, and up in a tube directly under the barrel he has a simple little engine that does this work.

As a consequence all recoil absorbing devices are eliminated, the gun is just as much lighter, it always remains fixed on the target and the one pound rapid firing piece can send something like 150 shots a minute.

One of the exhibits of Dr. McClean is a photograph of a target which was shot at in Lake Erie 1,500 yards from shore by Cleveland last May. The target was 16 feet. The number of shots fired was 25, and of these 25, and of these 25, more than 150 struck the target with the force of blowing twelve miles an hour. Nine of these shots were fired in fifty-eight seconds. The gun was an ordinary field piece mounted on wheels.

Dr. McClean's gas muzzle is a peerless device that is screwed on the front of the gun. It has in it a series of circumferential grooves with little vents. As the muzzle is passing out into the air and the gases pass through the grooves and out of the little holes. In its passage it simply pushes the gun forward with an energy calculated, equal to the power of the propellant.

Before the gases reach the muzzle they are let into a tube below to operate the reloading machine, which is operated chiefly of a long spiral spring.

Another advantage which is claimed for this gas muzzle is that it does away with the great zone of disturbance that is caused at the muzzle of a gun when it is fired, and through which the projectile is coming to pass. It is something like the pipe stream through a garden hose. If the stream straight through the nozzle and it will break down or injure the plants, but in it and the water does no damage. Thus a gas is sent through the muzzle, it does not interfere with the air and it does not interfere with the flight of the projectile. Dr. McClean did not stop with this, he found a way to overcome the danger of the heating of a gun. He has "knurled" the gun, that is, he has cross-grained

long ago the government made an appropriation for the purchase of 250 rapid guns on designs by American inventors. The authorities at Sandy Hook were experimenting with the McClean gun several months. Neither the experiment nor the McClean people will talk of the feature of the case. It is known, however, that all sorts of severe tests were made to the McClean invention. Other experiments, notably England, have exceeded the gun, and it was exhibited last year at President Diaz of Mexico by the states and Major General Joseph Wheeler, retired, who is president of the committee that is making these guns.

Privilege of an Envoy

Ambassadors Are Exempt from Arrest or from Any Legal Process.

Quite etiquette and strange laws are associated with the position of an ambassador. The main difference between an ambassador and a minister is that one is a person of power, since he represents the person of his sovereign; the minister represents the government. The social precedence given to an ambassador is immediately after the king of the blood of the royal, while a minister only takes rank after a duke. Ambassadors and ministers are accorded precedence among themselves according to the order of their appointments, and their wives enjoy the same privileges. In Rome a cur bit of etiquette obtains. In a house the plenipotentiary accredited
