tween towns and places in the state of Nebraska. The defendant then is a public service corporation engaged in transacting business for the public over the public highways of the state of Nebraska. The railroad companies over whose lines of railroad its business is transacted have had conferred upon them a certain portion of the sovereignty of the state of Nebraska—the right of eminent domain—so that they might exercise it for public purposes.

The grant of the right of eminent domain implies the consideration that the tolis, rates and charges to be made to the public for the use of the railroad shall be just and reasonable and not extorilonate and that no unjust discrimination shall be made. The power and authority which granted the franchise to the railroad company to become a corporation and to exercise the right of eminent domain and take private property for public use, even against the will of the owner, is the same power which is exercised to promote the public safety by requiring the lines to be fenced, road crossings to be made, cattle guards constructed, which regulates the transportation of live stock, prohibits the exaction of unreasonable and exorbitant charges for the carrying of passengers and freight. In granting the franchises the state did not surreneder or abdicate its sovereignty nor set in operation a power or agency which it thereby lost the right to control. After citing a number of analogous cases sustaining the doctrine announced the
