Continuous Trains of Oscillations. M. Thury of Geneva, has lately been exthus utilizing the current from a dynamo giving 25,000 volts and 114 amperes, and thereby producing a continuous train of oscillations. In the last number of the Revue Generale des Sciences, where the diagrams of Signor Galletti's article are reproduced, it is suggested that the train thus formed might be adapted to wireless telegraphy and telephony, with good results.

Irrigation by Electricity.

suburban railways having been demonstrated by the Puget Sound Rallway and Power company between Scattle and Ta- strong, well-managed, entirely trust concoma, the irrigation in that way of such cerns. Last year their earnings were 4.73 lands, where irrigation would be an im- per cent on deposits, and the total expense portant help to farming, is being suggested of management was but one-quarter of 1 as a new and profitable field for central station managers to exploit for promoting the sale of electrical energy in territory tributary to their lines.

Savings Banks Insurance.

age pensions now in process of adoption in The direct influence of the system must be England gives special laterest to another to encourage and reward thrift and reasonand much saner experiment under trial in able prudence, and, most important of all,

that by his invention it will be possible thorizing the savings banks to issue policies of insurance and of old-age annuities, under the inspection and guidance of the state Insurance department.

The investment of the funds is, of course, perimenting with continuous currents of confined to a list fixed by law. No profit high frequency, in place of the alternating accrues to the managers, and all returns ones in general use. He has succeeded, says beyond necessary expenses go to the inthe Athenaeum, as Signor Galletti tells sured. The annuities are limited to \$204 us in a recent number of Electricity, in the life insurance to \$500, in the case of any one bank, though the same individual can Insure in different banks. No solicitors or collectors are employed. All expert work is done by the state actuary. The state medical director regulates and supervises the physical examinations. Blanks and books are furnished by the state. The table given by Mr. Brandels shows what insurance and annuities will cost at various ages. A depositor in the bank aged 25 for the payment of \$1.50 a month, or \$15.60 a year, The success of electrically driven pumps carries life insurance for \$500, and at the for supplying water for irrigation purposes age of 65, after forty years, during which on lands lying along transmission lines of he has paid in bilt, has an annuity for the remainder of his life of \$100 a year.

The savings banks of Massachusetts are per cent. There is no doubt that they can carry on the business of insurance in the manner provided by the new law with perfeet safety and with the greatest possible advantage to the insured. Such advantage, it will be seen, is in no sense demoralizing The experiment in state socialism and old- or pauperising, but the exact contrary.
