Newest Theory of Light

(Centinued from Page One.) approach of a comet. And now comes the Arrhenius theory to interpret in terms of the light pressure discovery a list of perplexing problems, such as the aurora borealis, the sodiacal light, the turning of the comet's tall away from the sun, the drainage of the silicious matter composing Saturn's rings and the glow of dis-

Discussion of light pressure is inextricably bound up, of course, with the doctrine of the sun's bombardment of space with corpuscles negatively charged. According to the theory these offshoots from every luminous body in the universe collide in the intersolar spaces and there form the matter that, hurried now hither, now hence, under impact of the forces of gravation and light pressure may make up the lonely wandering meteors or the myrlad swarms that constitute the comets.

There exists, in other words, in Arrhenins' thought, a complete circulation of matter in the universe. The meteoric dust can material clouds float in no medium by the magnetic influence, the stream of under methods of mechanical propulsion falling today through our atmosphere is save the impalpable and unbuoyant ether? corpuscies that approach the earth's cen- that are not known to exist to make the alone, but from many other suns many corpuscies thrown off from the flery mass entering the upper and highly rarefied re- to say nothing of the distances to the fixed have occurred in distant parts of the terminations are made at each station of light years ago.
