Omaha, Neb.

**Gold, Silver and
Nickel Plating**

The Omaha Plating Company are the only expert Electric platers in the west.

Mr. Louis Slavin, the proprietor of the plant, had had over twenty years' experience with the largest Electric Plating houses in the east, before coming to Omaha. He established a business ten years ago at 13th and Farnam streets, under unfavorable conditions, considering the fact that numerous other plating concerns had failed in Omaha before he came to the city.

Owing to Mr. Slavin's thorough knowledge of the Electric Plating art and his qualifications for managing the business success was assured from the start. The plant was moved from 13th and Farnam to The Bee building, after a short time, on account of limited quarters. The growing business, however, soon forced Mr. Slavin to seek still larger quarters, when he removed to 15th and Harney street, where he remained until it became necessary for him to erect a building adapted to the line in order to handle all the business. The new plant is commodious, modern and strictly up-to-date. They can replate anything made of metal no matter how small or how large. They also do polishing and lacquering.

The Omaha Plating Co.,
1220 Harney Street.
