their products, but their people. Those who were originally responsible for the undertaking are gratified beyond measure at the result. Great strides have been made in the last twenty years along scientific lines, but it is only lately that scientific methods have been applied to the farm, and yet the farm is the greatest factor in our material progress.

Improved methods in mining, milling and manufacturing have lessened the cost and in most instances have made more excellent the finished product, but they have not materially increased production. Scientific methods applied to the farm, not only improve the quality, but increase the quantity. We boast of the wealth created by our cattle, our hogs and our sheep, but their very existence depends upon the products of the soil. If we are to utilize and enjoy to the utmost our great natural resources, particularly in this western country, we must turn our attention to the corn, the wheat, the oats, the alfalfa and the hay, and we must bring to their cultivation our highest and keenest intelligence. Instead of permitting our young men to leave the farm for the city we should induce them to leave the city for the farm. We should teach them these modern methods and educate them to understand that it is more honorable to create wealth than to consume it.

Funk on "Our National Expo."

Eugene D. Funk of Shirley, Ill., president of the National Corn association and one of the very founders of intensive farming in the United States, a member of the oldest family of improved farmers in Illinois, made an address on "Our National Corn Association," which is throwing all its influence to the success of the exposition. He said:

The National Corn exposition has adopted the phrase "An Exposition With a Purpose," and I believe it is appropriate at this time to refer to our National Corn association, an organization merely peeping from the shell from which it was hatched, but with a motto which effects every man, woman and child not only for this day and age, but for generations and centuries to come.

"The Betterment of Agriculture." This splendidly managed and magnificent affair which we are at this time opening, the second annual National Corn exposition will be drafted into history as a mere passing incident relative to the accomplishments that lie within the possibilities of such an agricultural organization.

History of success or failure always starts from a beginning. Time takes into account the rapidity or slowness of ability and action.

Opportunity constantly stares us in the face, but we are not always ready and willing to act, frequently the curtain hangs before our eyes and we wait for someone to take hold of the draw string. A monument should be erected by the agricultural interest of this country to the memory of the originator and founder of the National Corn association. I refer in these passing words to the late E. S. Fursman, who to my personal knowledge thought and planned for years how the agricultural interests of this great country could be united with one common thought of studying not only the present resources, but how to prepetuate future development for those who are to follow. A little over a year ago the National Corn association occupied the upper left-hand corner of a letter head. At first four names appeared with the titles of "officers," a president, vice president, secretary and treasurer. We later held an empty sack, but the musicians were beginning to ask for a position beneath the [illegible], clamoring for a hearing? A call was made down the country lanes of two [illegible] and this resulted in the response of eighteen recruits. A meeting was called, and in the gallery of the coliseum building of Chicago, during the first national corn exposition, and amid the drowning sound of a brass band at the other end of the building, a permanent organization was perfected. The present membership of the National Corn association now numbers 1,877, nineteen states are represented by its members. Then this organization, this present National Corn exposition was located for this year in Omaha.

There are here in competition for prizes amounting to over $30,000; 43,056 ears of corn; and some 1,200 enteries in wheat, oats, alfalfa, barley and clover, representing nearly all the states from Maine to California, including Mexico. England has its representatives here with small grains; fifteen leading states are represented by their agricultural college exhibits and illustrations of their particular lines of agricultural research. The results of years and years of study and investigation are shown in each one of these exhibits, how to grow more and silver crops and at the same time preserve the fertility of our soil is one of the most vital questions before the American people today. President Roosevelt and his commission are now ascertaining the needs of our agricultural communities and allow me to say in behalf of the National Corn association that we welcome their presence with us today and we pledge our hearty support in assisting in every way that is within our power to present the facts as they now exist and we will gladly accept of them any suggestion toward "The Betterment of Agriculture."

MAYOR OPENS GATES OF CITY

Bespeaks Welcome to Exposition and Visitors for People.

Mayor Dahlman was as happy in the brevity of his address of welcome as was Chairman Kennedy in his opening the exposition. Mr. Dahlman bade the visitors and the exposition welcome in the name and for the people of Omaha. He said:

Ladies and Gentlemen: I deem this a great honor and privilege to be invited to extend a few words of welcome to this great and important gathering. The people of our city feel proud of the fact that this exposition is being held within its limits. They have authorized me as its chief executive to turn over the keys to the visitors who are here, not only from our own great country but others as well. Many times before our gates have been thrown open to conventions and expositions, and every time our people, made up of the rank and file, broad, liberal and generous, have done all within their power to make our visitors feel at home. We realize that the purpose of this great exposition is to educate those who are engaged in agriculture and stock-raising, to increase the production of grains and make grasses grom more plentiful. This can be done by taking advantage of the knowledge to be displayed by the scientific men who are here with us at this time.

I wish to congratulate the committee of business men who have worked hard to bring about this exposition, which promises to be such a success. It is our hope that this convention may be located here permanently. Our city lies in the heart of a great agricultural and grazing country. Everything that can be done by our people to treat you right will be done. So I turn the city over to you, and I sincerely hope your visit will be a pleasant one.

WATTLES FOR THE EXPOSITION

President of Show Makes Address at the Opening.

G. W. Wattles, president of the National Corn exposition, at the opening exercises, spoke in behalf of the exposition. In part he said:

When Columbus discovered America he found here a food product which until that time had been unknown to the civilized world. History records that among the presents which he took back to Queen Isabella were some of the grains of this product, which he called Indian corn. Later, when the pilgrim fathers landed on the inhospitable shores of New England, but for the Indian corn, with which the natives supplied their needs during the first winter, but few if any of them would have lived to found the colony which has exercised such an influence in the development of the new world.

When Lewis and Clark made their historical journey of exploration up the Missouri river and across the continent to the Pacific ocean, their journal relates that along the rich bottoms of this river they found the Indians engaged in cultivating fields of corn, and at their winter quarters among the Mandan Indians of South Dakota, corn and the flesh of wild animals constituted their food.

Increased production can be accomplished by planting better grades that will, with less labor, increase the production. In all other departments of human industry experience and the teachings of science have assisted in greatly increasing the volume of production and the value of the product.

The farm value of the grain produced in this country is its value in the markets of the world less the cost of transportation to these markets, and while the rates of transportation on grain have been gradually reduced by the railroads of the country until today these rates are the lowest per ton mile of any country in the world, yet at our doors are great rivers flowing to the seas, and by the improvement of these rivers they may become the carriers of the products of the west to the seaport markets for much less than the actual cost of transporting them by rail. In 1877 the lake and rail combined rate on corn from Chicago to New York was 13.42 cents per 100 pounds. The all rail transportation at that time was 18.03 cents per 100. In 1907 the lake and rail rate had been gradually reduced until it was 6.20 cents per 100, while the all rail transportation was 10.17 cents.

Home mills and factories for the manufacture of grains and grasses into the finished products for domestic and foreign consumption will be of inestimable value. In recent years many new and useful foods have been manufactured from corn, until today it enters into more than 150 products which are distributed and sold in every country in the world. Not only are these products used for food, but they have become the principal ingredients in glucose, starch, vegetable oil, dextrin, spirits and many other articles of common use. That a product of such great importance to the west should be carefully studied and its annual yield in every way possible increased would seem but proper and right.

We therefore have this day opened to the world this National Corn exposition. Its principal purpose is to in every way possible educate the producers of corn and the manufacturers of corn products in the most scientific means of increasing the production and in enhancing its value. We have extended the scope of the exposition to include other grains and grasses and have gathered here samples of the best varieties that can be found in the world. On exhibition may also be found some of the most improved implements and labor-saving devices for the cultivation of grain, and incidentally may be seen other products and manufactures of farm, field and shop.

After reviewing the support of the exposition by the government and the variety of its exhibits, Mr. Wattles said:

And so we here today open this exposition to the world and dedicate it to the promotion of every influence that may assist in bringing to our country increased prosperity by the increase of knowledge among the producing classes.

BUTTER LANDSCAPE IS A BEAUTY

Specimens Made by Two Omaha Teachers Draws Crowd.

The largest crowd gathered around a single exhibit at the Auditorium Wednesday was that which admired the landscape in butter, which is kept from melting by a refrigerating plant installed by the Larsen-Baker company. The sculpture is the work of Miss Gertrude Warren of the Mason school and Miss Pearl Macumber of the Saunders and Walnut Hill schools.

These young women are preceptresses in manual training in the schools named, and aside from the landscape as a bit of plastic art, it is interesting as showing that besides teaching girls and boys, their instructors are able to do things themselves.

The principal figure of the scene is a young woman who is gathering ears of corn in her apron. At the instant the sculpture was completed, some one in whom Galatea was interested must have been coming over the horizon, for her eyes are turned in that direction. A shock of corn is also handsomely carved out of butter, and a pumpkin is growing at its roots. The base reliefs with which the walls of the booth are lined are even more artistic than the figures. These reliefs show several cows, a farm house and other rural objects.

The David Cole Creamery company furnished the butter from which the modeling was done. A prize will be given to the person guessing nearest to the number of pounds of butter used.

Misses Warren and Macumber worked on this splendid specimen just six days. Their product is the first thing of the sort ever attempted in the west.

MINNESOTA MAN OPENS EYES

James A. Larson Amazed at Immensity of Exposition.

James A. Larson, assistant secretary of state of Minnesota, arrived in Omaha, Wednesday morning, to remain through the National Corn exposition, as manager of the Minnesota exhibit. He said he was greatly surprised at the efforts which had been made by the people of Omaha to make the exposition a great success and predicted that the cost of the exposition would be infinitesimal in comparison with the benefits which Omaha and the entire corn belt would derive from a show of such an educational character.

"The show is right in line with what James J. Hill, one of the foremost citizens of our state is continually preaching—intensive farming," said Mr. Larson. "The day is past when a farmer can plant his crops in a haphazard way and hope to succeed. He must learn to select his seed and rotate his crops and that is the lesson this great exposition will teach."

Special values in girls' dresses at $5.00. Benson-Thorne Co., 1515 Douglas street.

RIVERS AND HARBORS

(Continued from First Page.)

Mexico," asserted the governor. "It will solve the problem of rate regulation, and will make unnecessary further discussions between sections as to whether federal control absolutely, or state control can be best, because competition itself would solve the problem."

Following the inventory of lands, presented by Senator Nelson, there was an informal discussion. Senators Newlands and Smoot and Governors Noel, Broward, Ansel, Lea and former Governors Hoke, Smith and Blanchard participated.

The conference was called to order by Chief Forester Gifford Pinchot of the Department of Agriculture. The report of the commission was presented by former Governor Blanchard of Louisiana.

Mr. Blanchard deprecated the lack of co-operation among states and between the federal and state governments, ascribing to that the failure of conservation. He urged the appointment of a permanent conservation commission with certain powers delegated by congress and with appropriations to carry out its work. Senator Newlands of Nevado spoke of the importance of the conservation commission's work and the need for its permanency with suitable appropriations and upon his motion, seconded by Senator Smoot of Utah, a committee will be appointed to present the question to congress.

Senator Flint of California, presented the report of the mineral section of the commission.

In submitting the report Senator Flint made an address in explanation. He predicted the supplies of high grade iron ores will be consumed by the middle of the present century, high grade available coal by the middle of the next century, copper, lead, zic and precious metals by the end of the present century and phosphate rock, so essential to soil fertility, within twenty-five years at the present rate of use and waste. He decried the wastes of natural resources, charged that enough natural gas to light all the large cities of the United States of ever 1,000 population is escaping into the atmosphere and that approximately $1,000,000 a day is being wasted in coal mining and other mineral product.

At the afternoon session, Chairman Knute Nelson presented the report of the section on lands.

Mark Cross' leather goods novelties on display now. Benson-Thorne Co., 1515 Douglas street.

CONVENTION OF IMPLEMENT MEN

Unusual Large Representation of Dealers and Manufacturers.

MITCHELL, S. D., Dec. 9.—(Special Telegram.)—This afternoon the delegates to the tenth annual meeting of the Retail Implement Dealers' convention commenced arriving for the convention, which opened this evening. About 150 dealers are here from this state and southwestern Minnesota and northwestern Iowa. The number will be largely increased by the arrival of the evening trains. The advance guard to the convention in the nature of the representatives of wholesale houses is said to be the largest in many years. About seventy-five houses are represented here with good displays of the various lines in which the retailers are interested.

"There's a Reason"

German Hospital Tests American Discovery for Skin Diseases

In the Berlin Hospital for Skin Diseases much interest has been aroused by Dr. J. E. Currier's report on citrox published in the Doctor's Guide. While the hospital is very conservative, Dr. Currier's standing is so high that they determined on a trial of this well-known drug in ten selected cases of eczema, salt rheum, tetter and psoriasis, following the method of treatment outlined by Dr. Currier: "Dissolve one teaspoonful pure powdered citrox in two tablespoonfuls hot water and bathe the diseased skin for 20 minutes at a time twice a day. The solution must be made fresh each time and used warm, taking care to get the pure drug in a sealed package, just as it comes from the citrox works."

The results were amazingly successful, eight cases being cured in three weeks and the other two showing great improvement. The citrox treatment will be used very extensively by German skin specialists hereafter. A great point in its favor is that it is so simple and it is a drug obtainable in any town. It stops the itching immediately and dries up the eruption in a few days.

TAFT AND CANNON CONFER

Tariff Revision Plans Discussed at Conference.

COMMITTEEMEN TO BE CALLED IN

Arrangements Made for President-Elect to Meet the Republicans Who Have Been Taking Evidence.

WASHINGTON, Dec. 9.—President-elect Taft's day here was crowded with conferences and social engagements. The important feature was a conference with Speaker Cannon, which caused an arrangement for the republican members of the house committee on ways and means to meet Mr. Taft tomorrow.

It also was arranged that at the conclusion of this conference a statement should be issued to make known what the attitude both of the president-elect and the committee is to be respecting the forthcoming revision of the tariff. Mr. Cannon called upon Mr. Taft upon the latter's invitation.

Until this statement is made Mr. Taft said he and Mr. Cannon had agreed not to discuss what had taken place between them. The apparent satisfaction with which Mr. Taft explained the situation was taken as an evidence that matters were very much to his liking. It is known, of course, that the subject under discussion between Messrs. Taft and Cannon was the coming revision of the tariff, regarding which Mr. Taft has declared himself most positively in favor of a thorough revision.

It is understood that very little was said between the president-elect and the speaker concerning the details of the proposed tariff legislation, but that the conversation dealt entirely with the broad principles involved in that legislation. They proceeded upon the express understanding that they had come together as the representatives of two co-ordinate branches of the government and whatever of difference in details in the future may develop, if any, today's discussion was on the friendliest possible basis.

The understanding, so far as there was any, was that the president's part in the preparation of a new tariff would be confined to such suggestions as he might desire to make, and he was assured that while these would be listened to by the house with every possible consideration, he was not led to believe that the house would abandon its prerogative in the preparation of the new law. Nor was there any indication on Mr. Taft's part that he would expect or desire it to do so. Both agreed that the tarrif should be revised and that the revision should be along the lines indicated by the tariff plank of the republican platform. Neither indicated a desire to depart from protective principles in the work to come.

When urged for a statement, concerning the interview, Speaker Cannon replied that owing to the fact that he had met Mr. Taft at the latter's request he could say nothing.

After the conference Mr. Taft attended the meeting of the board of trustees of the Jeanes fund for the education of the negro in the south. Later he took a long walk with Senator Dodge of Massachusetts, and on returning to the Boardman residence received many congressmen.

The president-elect and Mrs. Taft were guests at luncheon of Assistant Secretary of War Oliver and Mrs. Oliver. Tonight they dined with Mrs. Mary Scott Townsend.

Our special $20.00 suits and overcoats for young men are wonders. Benson-Thorne Co., 1515 Douglas street.

DARED ONCE TOO OFTEN—DEAD

Resident of Grand Island Jumps from in Front of Train, but Late.

GRAND ISLAND, Neb., Dec. 9.—(Special.)—Henry Bruechmann, a resident of this city since 1881, was instantly killed by Union Pacific passenger train No. 6, not over 100 yards from the spot in which E. R. Rickey, a transient barber, was killed about a week ago. The accident happened in broad daylight, in an unusual manner and in the sight of five or six people who were working or passing nearby at the time. Bruchmann was returning from the city to his home, crossing the yards on the east side of the Walnut street crossing just as the train was pulling in.

One of the car inspectors is a neighbor of Bruschmann, knew him well and told him of the coming of the train and that he should hurry. Bruechmann replied jokingly, "Oh, I'll get across," and when he reached the track on which the train was bearing down upon him, stopped, looked at the train, glanced from it to some of the workmen, and just as he stepped off the track is said to have cried out: "See?" He did not step far enough from the track, though mimicing sprightliness, and the pilot struck him. He was thrown about twenty feet and picked up in an unconscious condition. He was taken to the baggage room and there breathed his last before the doctors, who had been summoned, arrived, of concussion of the brain. There was a gash in the back of his head, but the skull was not broken and he was in nowise mangled. He leaves a wife, a brother in Iowa, and a brother and sister in Germany. As the train was not running over five to ten miles an hour the accident occurring just a block from the depot, Coroner Sutherland did not call an inquest.

Loan Talk

NO. 1.

We believe that our plan of loans meets the requirements of all borrowers who really desire to get rid of their debts, whether the amount needed is a few hundred dollars or several thousand dollars. In a long run a person will pay less interest on our loans and get rid of the debt more quickly than on any other plan offered. Our interest rate is the lowest of any in the city and can be maintained as low as any, because this is the largest association in the Middle West, with the largest volume of business, and is therefore able to carry on its affairs by the expenditure of a less percentage of earnings than smaller companies.

If you are interested in borrowing money for any legitimate purpose, call and consult us any day or on Saturday evenings, when our office is open until nine o'clock.

Resources, $3,250,000. Reserve, $80,000.
