Practically all of the leading basket ball candidates have returned to the university and are preparing for the southern trip, which will be taken the latter part of next week, when the Kansas State Agricultura college and Kansas university will be played with the Jayhawkers will be met in two games at Lawrence, one contest being played Friday and the other Saturday night.

Some of the basket bail men have been practicing this week in an effort to get into shape to meet their Kansas opponents next week. Dwight Bell and Captain Walsh, the two veterans, have been working real hard and they probably will be able to star on the trip. The green material is also doing some faithful practicing under the keen direction of Coach Clapp, but none of the team's supporters expect these new men to get into shape to do any brilliant playing by the end of next week.

CARD PUZZLES IN NEW FORM Paying Out Poker Hands-Cards and

Numbers. A variation of a puzzle which is at least 900 years old is on its rounds in the clube just now. The proposition is to take a pack of cards, shuffle them, out them and then count off twenty-five, taking them as

they come. These twenty-five cards are to be arranged in the form of a magic square, he object being to see how many poker hands can be made out of the twelve rows that the cards will form, horizontally, vertically and diagonally. There is no limit

Another popular variation of the same puzzle is to take twenty-five cards and lay them out in five rows of five cards each, supposed to be poker hunds, and then shift them about until each row is a pai hand. There no limit to the number of changes that may be made, but every on of the hands must be technically pat; that is, it must be of such a character that it is not necessary to draw to it, because discard would either spott it or a draw could not improve it. Of the standard poker hands only four are pat-atraights, flushes, fulls and four of a kind.

It is said by experts at this game that it is impossible to pick out any twentyfive cards from which five pat hands cannot be made, an assertion which has cost some people a good deal of time and

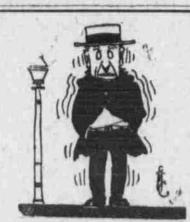

which he mentally added five, giving him a sum consisting always of three figures The first of these three figures is the num ber of pips on the card the first person took. The second figure will equal the num ber of pips on the card taken by the second person, and the third figure will tell the number of pips on the third person's card. Although this process seems a little com plicated in telling it it is not so in practice and the certainty with which the cards can be named comes in the nature of a surprise especially if the operator simply names th
