A New Rate Ruling.

In ruling that the practice of railroads granting rates for transporting freight of other roads is illegal the Interstate Commerce commission has touched a vital point. The commission and the courts have both held repeatedly that there are no exceptions to the uniformity rule except where specifically made in the law itself. In point of revenue it will probably make little difference to the Omaha's June birth record shows up railroads as interchanges of traffic

With such a ruling in force railroad manments for Boston people to migrate agers will be doubly careful, about there by putting beans on the free list. manipulating rates and classifications to benefit favored shippers on any

Gradually the commission is reducing the rate question to a point where actual as well as theoretical uniformity in rates is secured and when this is done many other hitherto perplexing problems will be comparatively easy. Simplified classifications and uniformity between shippers should help wonderfully to determine what are remunerative rates.

Overstepping the Limit.

Another one of the freak laws which have made Oklahoma famous has been declared unconstitutional by the federal court. The state sought to prohibit the shipping of oil and gas out of the state and the court held this to be an interference with interstate poration earnings as a discrimination commerce and an infringement upon the rights of property.
