Homes and The Journal

Most people live in homes. The advertising importance of this is not at first apparent. But if all the world were bachelors and bachelor-maids. and lived in hotels, the advertiser's problem would be infinitely more difficult.

On many purchases for a woman's own use men have an important influence; but there is scarcely anything which a man uses which is not susceptible to woman's influence, Did you ever know a man who long continued wearing a style of collar which his wife persistently "knocked"? Did you_ ever know a daughter who could not "tease" the building of a new baywindow?

The buying-influence of woman is underestimated. The advertiser who has with him the women of America need not worry about any one else.

LOVER HAS ONE LIVELY DAY

Testifies in Divorce Trial, Then Meets Obstacle Getting License.

TOUGH TIME TO PROVE HIS AGE

Twenty-One on Second, Backed by Girl's Paps, and Then Gets Permit.

Maple streets. Beginning with early morning duties as

ing in a Florence divorce contest. Not discouraged by the example of domestic infelicity there set forth, he then went to the office of the county judge to procure a marriage license.

Two obstacles arose in his path. He had not brought a consent from the father of the girl, who is Miss Ruth Johnson, 17 years of age. Moreover, he told the license clerk that he himself was 29 years of age. "Too young," said Mr. Furay,

"Come to think of it, I am 21," Mr. Furny cried, "Ob, get out," or words to that effect.

Ross retreated. Repulsed, but not overwholmed, he proceeded to exhibit that stick-to-it quality which the copy book mottoes say leads to fame and glory. After luncheon Ross came back with reinforcements. He had the father of the girl and another friend, and the three held parley with Furay,

"Don't he look at least 25 to you?" demanded Mr. Johnson, father-in-law-to-be. Furay Couldn't See It.

"He looks about 17," said Mr. Furay, ruthlessly.

"since he was a little tad," and that he case of sleet or storms. knew him to be several months past 21. give an estimate of Ross's age. The spec-

Finally Mr. Furay melted. "I'll let you have it," said he, "but you will admit that it looks pretty raw to say you are 20 and then to come back and call yourself 21."

Mr. Ross admitted that it looked suspicious, but reaverred his majority. Taking the license, Rose sallied forth to find the bride and Rav. Charles W. Sav-

Ross followed this by testify- of the country, and they discuss kilowatts, electricity will do the statistican has found

to the layman.

One of the most important problems in the field of electricity is that of the commercial practicability of the new storage battery street car. Trials have been made which prove that it is a mechanical success, and if it works as well commercially urban transportation problems will undergo as great a change as marked the passing of the horse car and the coming of the trolley. For years the central power plant has been considered the last word in the economical operation of street car systems, although its installation has meant the expenditure of millions for plant equipment, underground trolleys and overhead wires. Now comes the storage bat-

With and the wire adds an additional weight of that he might be anywhere between 19 the storage battery car all that needs to only twenty ounces to it. A 110-volt curhorse car has come back, with the exception that instead of a horse of skin and bone and spavin, dragging the car along at a snall's pace, the passenger has a horse of metal and chemical riding beneath his feet and carrying him as it goes-a horse which is never hable to condemnation by a local Society for the Prevention of Cruelty to Animals.

In these days when wonder follows wonder with lightning-like rapidity in the field of electrical invention, the announcement of a television telephone does not tax the Treat Even a Dog oredulity as much as the telegraph instrument did two or three generations ago. This great idea no longer exists merely in the fevered imagination of some Jules Verne-it is now in actual process of accomplishment. Think of it! Going to your "Bruno," a big black mongrel dog, home to be as well developed as was wireless 6,000,000 passengers a day. Roughly speakand habitat unknown, met misfortune and telegraphy a decade ago. It all is to come ing, this is twice as many people as are distinction by the same stroke. In figuring out what a cent's worth of amperes, ohms, armatures and such things that it will drive a twelve-inch fan for in an intimate way that is quite confusing ninety minutes, heat a six-pound smoothing iron for fifteen minutes, make four cups of coffee in an electrical percolater, cook a good sized steak, heat a luminous radiator eight minutes, brig to a boil two quarts of water, drive a dentiate drill four hours and run a pianolo one hour.

One of the big manufacturers of electrical machinery is making some turbine-driven electrical units of 14,000-kilowatt capacity. To appreciate what power these great engines will generate one must have it expressed in comprehensible terms. What is technically known as the fifth stage ele ment is a big wheel twelve feet eight inches in diameter which, when going at full speed, rotates at the rate of 750 revotery car with claims for preference, which lutions a minute. If it were running on a the New York trials under actual trans- railroad track it would travel 5.65 miles a portation conditions seem to vindicate, minute, or from New York to San Fran-The cost of operation is very much less, cisco in nine and a half hours. The rotatand the cost of installation amounts to ing mechanism weighs ninety tons, yet so even still less. Moving independent of perfectly it is mounted that it can be every other car on the line, so far as turned with one finger. One of these units motive power is concerned, there can be would light \$50,000 sixteen-candle power no tie-up on account of the "juice" glying electric lights, enough to illuminate 600 out. There are no plews to get stuck in miles of hallway ten feet wide, or supply Johnson swore that he had known Ross a slot, or overhead wires to be broken in an acr light for every 150 feet between New York and Chicago.

The storage battery street car will prove A new thing in electricity is an elecmetropolis that flourishes in almost every robe having 7,000 feet of wire woven becountry. The prohibitive cost of installa- tween the lining and the outer cloth. It be done is to may a track, buy the cars rent, either alternating or direct, produces and a street car system is ready for the gradual warming. Contact may be estabgala day of formal opening. Thus the lished with the electric light system of any ordinary house.

Not long ago an enterprising theatrical man staged what he called an electrical ballet. There were dozens of chorus girls wearing costumes which could be lighted with myraids of tiny electric bulbs. The dresses were wired and the little bulbs hidden away. Contact was made by their escorts holding the wires in their hands and pressing them against a metal plate at the back of the girls' waists. The result is said to have afforded a beautiful and unique spectacle, and by a well organized system of handling the wires it completely mystified the audience as to the source of the electricity.

While discussing the electric elevator problem a speaker before the Electrical telephone and seeing the person at the Engineering society of Columbia univerother end of the wire, though miles and sity stated that the 8,000 passenger elevamountains lie between. The idea is said tors on Manhattan island carry more than duct electricity when subjected to light, son rides only fifty feet the aggregate dis-The degree of its conductivity depends 60,000 miles a day. The Engineering society of New York recently kept an account of In the transmitter there is a frame filled the expense of elevator service in its buildwith selenium cells like honey-quib in the ing. It found that under conditions existlittle pound boxes found in the grocery ing there, which are said to approximate store. In an address delivered in Winnipeg the collector. This collector turns very few days ago Prof. J. J. Thompson estimated that under a high sun and clear sky the power guaranteed by the sun amounts to about 7,000 horse power per acre. He figures that when the natural resources of America give out its people will have mastered the problem of using solar energy and that the world's business centers may then be moved to regions like the Desert Sahara, where sunshipe can be stored day in and day out throughout the year. It will then be distributed by big electrical transmission lines to less favorable spots for use in industrial activity.

A Better Way to Wash Clothes

WITH CLEAN, warm water and a cake of Lenox Scap, any woman can do good work.

BUT SHE CAN DO BETTER WORK-and do it easier-if she uses Lenox Soap solution.

THIS IS THE WAY TO MAKE IT: Take a cake of Lenox Soap, cut it into small pieces, dissolve hese in three quarts of boiling water. Reep water at boiling point until a solution is formed.

Wet the clothes, rub soap solution on the solled parts, fold and roll each piece separately, pack in a tub, cover with warm soapy water and let stand over night. Next morning, you will find that the really hard part of washing-rubbing the clothes up and down the wash-board—is not half as hard as usual.

Lenox Soap-Just fits the hand

This Marvelous Health Vibrator

Relieves Suffering

Cures Disease

When you hurt yourself you rub the spot. When your head aches you rub your temples. Why? Because vibration is Nature's own remedy, and rubbing is Nature's crude way of creating vibration and starting the blood to going. Disease is only another name for congestion. Where there is disease or pain there you will find the blood congested and stagnant. There can be no pain or disease where the red blood flows in a rich and steady stream. Good circulation means good health. Con-

The Lambert Snyder VIBRATOR

Is the greatest medical discovery of the Twentieth Century. It is capable of giving from 9,000 to 15,000 vibrations per minute—100 times more than is possible with the most expert minute—100 times more than is possible with the most expert master of massage. It is a light, compact instrument, weighs twenty ounces, can be operated by yourself with one hand by moving the steel head over the rigid steel rod, and can be placed in contact with any part of the body. It is Nature's own remedy developed and concentrated, and with one minute's use sends the red blood rushing into the congested parts, removing all disease and pain.

If You Have Any of These Ailments You Need the Lambert Snyder Vibrator

Rheumatism, Sciatica, Lumbago, Gout, etc., are caused by uric acid in the blood in the form of urate of soda. This acid, through poor circulation at some particular part, gets stopped on its way through the form of urate of soda. This acid, through poor circulation at some particular part, gets stopped on its way through the system and, congregating, couldes pain. Apply the Vibrator to the spot and you will relieve the congestion and get relief at once.

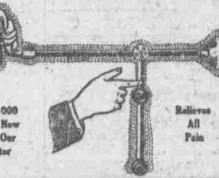

Deafnoss, Head Noises, Ringing in the Ears, in most cases, are caused by the thickening of the inner membrane through catarrh or colds. To cure this, vibration is the only thing, as it is the only way to reach the inner ear drum and loosen up the hard wax or foreign matter, so sound may penetrate to the drum.

Stomach Trouble, indigestion, Constipation, etc., are caused by the food not properly digesting; it lacks necessary saliva and gastric joices, thus creating congestion in the stomach; forming gases, caming pains, bad breath, etc. Apply the Vibrator to the atomach; it settles the food down, releases the gases, regulates the action and brings about relief instantly.
