### LABOR SPREADS DOCTRINE

Series of Meetings in Des Moines to Fortify the Cause.

### MORE CANDY WITH POISON

Mrs. George Stewart Taken Ill in Mysterious Manner—Reprint by Street Car Company.

(From a Staff Correspondent.)

DES MOINES, Ia., April 1.—(Special Telegram.)—Incidental to the meeting in the city of the members of the miners Trades and Labor assembly is conducting a series of meetings for revival of interest in union labor.

President White of the miners started the week with an urgent address urging the workers in all lines to join the unions.

After partaking freely of candy delivered by an unknown messenger boy, Mrs. George Stewart was taken violently ill and came near dying.

Mr. Brandeis said that in view of Mr. Madison's statement he was willing to allow the record to stand.

### NELSON AND BRANDEIS CLASH

(Continued from First Page.)

Agent H. T. Jones, for the "prosecution" were false.

The direct examinations occupied but a few minutes, the cross-examination by Mr. Brandeis taking up the remainder of the session.

Mr. Todd and Mr. Love were prepared for the onslaught of the Glavis attorney and their answers were sometimes sharp as the thrusts of the prosecutor.

Mr. Brandeis said that in view of Mr. Madison's statement he was willing to allow the record to stand.

### PEACE NEAR IN MINERS' STRIKE

(Continued from First Page.)

### DOES FOURTEEN MEN'S WORK

Arthur F. Griffith and Some of His Remarkable Stunts in Mathematics.

(Continued from First Page.)

Lighting calculators have periodically appeared during the past two or three centuries.

Some have developed their powers precociously and as "infant prodigies" have astounded all who came in contact with them.

But usually this premature development, involving such a nature naturally great strain on the young mind, resulted either in an ultimate dimming of the intellect to a state about equal to the normal mental capacity, or aggravated, brought on an early dotage.

Others of these mathematical wizards, born with an inherent attraction for figures, have progressed by comparatively rapid, although not precipitate, stages with a more naturally developed system they are able at twenty, at thirty, and at forty years to outstrip easily all competitors in the race with figures.

To this latter class, it now appears, belongs Arthur F. Griffith, known on the vaudeville stage as "Marvelous Griffith."

This young man—he has yet to attain his thirtieth year—is possessed of extraordinary powers of mental calculation, and is able to carry on several mathematical operations in his mind at the same time.

The truly wonderful part of his story lies in the fact that he is a product of the farm.

Without pen, pencil, or paper; without slate, blackboard, or chalk, this wizard of figures can raise a figure to the sixth power in about eleven seconds; can multiply three figures by three figures in five seconds, can multiply nine figures by nine figures in eight seconds.

Griffith deals in millions and quadrillions rather than in the ordinary digits. But this figure faculty of his has grown so wondrously that its great development has rendered difficult the proper cultivation of other mental faculties.

Thus Griffith's aptitude is for figures entirely, rather than for a conversation on any general current theme. In fact, he lives in figures. Walking, he simultaneously calculates distance, time, and energy. His distance he reduces to inches, time to seconds, and in computing his expenditure of energy the problems winds its solution in his conception of the size of his next meal. Again, his narrowness of comprehension in general matters is illustrated, for Griffith's meals all are built around ham and eggs, mainly eggs.

For years he has been the bewilderment of mathematical and psychological professors in America's foremost centers of learning. Members of these departments of Harvard and Yale universities have quizzed him on his capacities for mental calculation. Chicago and Indiana universities, Armour institute, and Northwestern university, too, have experienced his marvelous work.

Within a few days he convinced many skeptics among the mathematical and psychological professors at Harvard that he is possessed of the powers which he claims. As a result of this exhibition, in which two scores of professors were aligned against him and shot at him friendly broadsides of queries and problems involving every phase of mathematical calculation except the "fourth dimension," he received from Prof. Hugo Munsterberg, professor in psychology, a testimonial of his feat.

Griffith is always ready with demonstrations of his marvelous power. He rattles forth a succession of words and figures—mainly figures—forming his query, and before one can follow him he has answered.

The following include a few suggestions which he makes for an examination in mathematics. He claims to have the answer to each at his tongue's end:

"What is the compound interest on 1 cent at 4 per cent from the birth of Christ to the present date, and how far would that many silver dollars reach in the air if placed flat and against each other on every square foot of a clear and level floor 2,000 miles in circumference?"

"Which numbers with six figures to each, raised to the sixteenth power, make 29,818, the last six figures, and what is the sixteenth powers of each of those numbers?"

"What is the sum of twenty-five numbers with twenty-five digits each that always will divide two with the exponent twenty-five out evenly with only two of the digits in each number?"

"What two sums of all numbers from 1 upward added makes a sum of all numbers from 1 upward; subtracted leave a sum of all numbers from 1 upward, and multiplied make a sum of all numbers from 1 upward added?"

"How many standpipes 2.500 miles in circumference (the distance around the earth) and 22,000,000 miles deep (the distance between the earth and sun) would be required to hold one virginitudin drops of water if it required 61,440 drops of water to make one gallon?"

"Light mental exercises," Mr. Griffith characterizes his wonderful memory it is interesting, perhaps, to note that Griffith claims to be able readily to recall numbers by reason of a sort of mental biographic operation. He says that the mention of a number is followed by its appearance before his mind's eye, literally, and that then there is communicated to him the one system of the 1500 which he has evolved to aid him properly in an expeditiously correct solution.—New York Times.

### EVERYBODY admires a man with the staying qualities.

The same is equally true of Clothes—and our Clothes are chockfull of this satisfaction-giving essential.

The suits and overcoats we sell at \$25.00 merit your careful consideration.
