stone had been placed upon their labors. no fewer than three of their co-religionists would be sitting in Parliament as members of the government, and one as a cabinet minister? It has become the usual thing to say, when an English Jew has attained to high political honor, that such success is but the logical result of the emancipation victory. But it requires something more than logic to explain in this instance why the Jewish population, who proportionately to the rest of the inhabitants of the United Kingdom figure but as 1 in 200, should be taking so large and important a share in the government of the country. It is an illogical rather than a logical phenomenon. But then Jewish history always has been full of surprises and paradoxes, and perhaps the greatest paradox of all is that, while in Russia and Roumanik Jews are groaning helplessly under well-nigh unexplained restriction and oppression, here in England they should be enjoying a position of unprecedented influence and honor.
