HOBOES OF THE HEAVENS is of prodigious tenuity. The nucleus is condensation. It may be either solid or

liquid. However that may be, the total anant of the comet, including its nucleus, is in-comparably smaller man that of any of the planets. We have absolute proof of this in the fact that no disturbance is felt by the planers when the comet passes -In their neighborhood. When a stone falls on the earth the force of universal attraction draws the stone and the earth together; but the perturbation felt by the earth is insignificant compared with that inflicted by attraction upon the infinitely smaller mass, the stone. When Lexall's comet came near each in 1770-it was only 2.000,000 kilometers away-the comet doviated visibly, although the earth showed

no sensible change of movement. The comet would have varied the year's solar system. It periodicity was assumed jength by three seconds had its mass been for the first tibe by the English astronomer the equivalent of the mass of the earth. Halley, who predicted its return at the But the astronomers watching it and close of the year 1758 or the beginning of the watching the earth noted no change. The year 1750. It appeared in March, 1759, and same comet passed between Jupiter and proved the periodicity of one comet-from its satiltes without changing the period of their revolution.

What Are Comets Made Off As far as man can judge, the cometary own movement in the heavens. Nor can mass is very weak; and the comet in all they be considered as planets, because but its nucleus is excessively distinct al. planets turn around the sun in the same Nothing could be more chimerical that direction, while comets have been known fear of disaster by collision between the to travel as fast in one direction as in an- comet and the earth. Such a collision is other. Some comets are tailless; others possible, but a disaster is improbable grow tails when they are in the vicinity Probably the tails of comets are composed of condensed particles as well as gas. The If there were no other distunguishing gaseous center contains carbon in the triple features the transparence of comets and form of cyonogen, carburate of hydrogen, the feeble density of their constitutent and oxide of carbon. So, presumably, there matter would be enough to show that they are in the cometary atmosphere carbon, the stars is much more condensed than 1881 contained sodium. Vogel of Potsdam cometary matter. Only the comets of great heated a fragment of meteoric stone in a

The tails of the majority of comets escape approaches the sun its tail stretches behind it. When it has passed the sun its tail All the celestial travelers obey the law passes ahead of its nucleus and precedes it tween the sun and cosmic matter. Max-Comets coming from afar may become in- well and Bartoll made all the hypotheses in space, repelling the objects they break Kant, Faye and others bequeathed to us against. American scientists have demonprofound conceptions concerning the stars, strated the existence of the pressure of

Concerning the Tail. The theory of the pressure of radiation cose to be governed, as it has been gov- gives the only plausible explanation of the movements of comets' talls when the comets approach or recede from the sun All that we know of the constitution of the sun, as well as information given in recent works concerning the aurora borealis. leads us to admit that the sun acts as a powerful center of the electrons, or atoms sun and the planets which are still coming, of negative electricity, incessantly projected into the dark abysses of space. The electrons so thrown out strike the gaseous matter expelled from the meteorites formomers calculated that they were when they began their allotted work, it will take them ing the tails of comets and that matter abruptly spreads out in the surrounding

Concerning comets all astronomers agree two stars which traveled with unequaled as to their transparence; and it is ad- speed. The two stars reappeared in 1865, when they were seen on two nights only. That was the last of them. Since then what was known as Biela's comet has

never been heard of. It is easy to believe that it is the debris of comets incessantly powdering the skies which gives us what we call "falling" or "shooting" stars.-Harper's Weekly,

SERUM MASTERS DISEASE Preventive and Curative Treatment of Cerebro-Spinal Men-

ingitts. One of the foremost of American surgeons, who on Saturday sailed from New York for Europe apparently upon a somewhat hurried call, was anxious for important professional reasons that there be no announcement of his departure. He expects to return in the mid-spring, and may, BURLINGTON STATION-Tenth and at the annual meeting in St. Louis of the American Medical association, or that department of it which deals chiefly with surgery, make some rather important an-

nouncements.

The surgeon was especially pleased that he would be able to report to his friends in Europe that the demonstration of the success of the preventive and curative treatment of cerebro-spinal meningitis, discovered and perfected by Dr. Simon Flexner, at the Rockefeller Institute, in now complete. It was made by Dr. Flexner himself before a large gathering of men of science and of medicine two or three evenings ago. Heretofore no more has been claimed for Dr. Flexner's discovery than that in all probability it would be found as available for use in meningitis as is the
