"Gas Service"
Another Way to Get Hot Water—
There are two styles of water heaters. One the kind that connects with the kitchen boiler, the burner of which you must light; the other, that which acts automatically. The mere fact of turning on any hot water faucet in your house operates this heater so that the water runs HOT instantly.
This appliance is connected to your water supply, has its own gas burner, is independent of anything else and stands in a corner of your cellar, requiring no attention—out of sight and out of mind.
Ask to have it demonstrated at our office.
