Preserving

PEACHES.—For seven pounds nice peaches, peeled, allow three or three and a half pounds of sugar, according to the acidity of the peaches, a pint of vinegar, an ounce each allspice and cloves and three or four pieces of stick cinnamon or two dozen cassia buds. Stick the peaches into the peaches and tie the rest of the spices in thin muslin bags. Boil sugar, vinegar and spices together and pour the mixture hot over the peaches, which may be left whole or cut in halves.

Way of Keeping Fruit.—The following directions are given for the process of keeping fruit in jars covered only with cotton batting. Use crocks, stone butter jars, or any other convenient dishes. Prepare and cook the fruit precisely as for canning in glass jars; fill your dishes with fruit while hot and immediately cover with cotton batting, securely tied on. Remember that all putrefaction is caused by the invisible creatures in the air. Cooking expels all these, and they cannot pass through the cotton batting. The fruit thus protected will keep an indefinite period.

Black Hills Cities Find Rock Already Broken at Hand for Practical Use. DEADWOOD, S. Now it is being used by the city officials in paving streets here and laying the foundation for good roads and is proving of much practical value. These tailings consist of a small, rough rock unlimited in quantity. The Burlington railroad has also seen its practical use and is now hauling it out to lay as ballast on its Black Hills track.
