The distance between shores, starting at the two points designated, are 3,909 and 4,400 feet, respectively, and a middle pier would be essential to the support of the proposed structure. No single span for such a distance would be safe or feasible.

In the opinion of Dr. Kunz this part of the river was in prehistoric times a deep arm of the wea and its depth in preglacial times must have been about 750 feet. The borings recenly made at various points went down as far as 150 feet without finding anything more solid than silt and sand nud, and this, it is claimed, must dissipate the hopes and dreams of all those who have wished and expected to see in the not distant future a splendid structure spanning the noble river.

Plans for underground connection of lo cal transportation systems with the new Grand Central station provide for four uperimposed subways beneath Forty-second street. Of these the uppermost will be a concourse, from which access may be had to any of the three levels below it, which will no doubt be extended east to Lexington avenue, connecting there with the proposed tri-borough route. Below this point concourse is the level of the present inter-borough subway.

The floor of this tunnel will become the roof of the station of the McAdoo tubes at the Grand Central, and below that wil be the Beimont tunnel to Long Island City, the operation of which seems to be getting within the range of probability as the result of the interborough company's
