

### SILO FOR FEED CONSERVATION

Ensilage Offered as Solution of Stock Raising Problem.

### SAVES LOSS OF FORTY PER CENT

Corn Fedder Made Available for Production of Beef and Milk—Prof. Haacker Explains Advantages of System.

Forty per cent of the western corn crop goes to waste each year.

Part of the educational display of the Omaha land show will be devoted to lessons on the conservation of the corn crop and the utilization of the waste. The silo system of making the entire crop available for the feeding of cattle, the process by which so large a portion of the grain wealth of the Nebraska farm is converted into money, will be detailed to the visitors.

Prof. H. L. Haacker, until recently at the head of the dairy department of the State College of Agriculture, will give lectures and conduct an exhibit showing the advantages of silo feeding.

"Not 90 per cent of the total food value of the corn plant is obtained from the grain," said Prof. Haacker in a discussion of his subject. "The remaining 10 per cent is in the stalks and leaves which are now allowed to go to waste and destruction as a total loss in the fields. By the use of the silo this very valuable part can be turned into money."

Further, the process is so inexpensive that a silo equipment is paid for by its savings for one year.

"Another way to show the economic value of the silo is by a comparison of its value as a food with its cost of production."

Ensilage is worth not less than \$1 a ton, probably much more. It costs, with every possible item of expenditures included, \$1.24 a ton.

Value Beyond Estimate.

"It is difficult to write the value of ensilage in terms of money, however, for the reason that many of its properties cannot be so measured. For instance, while an analysis will show probably no more food units than hay, another food, ensilage has succulency, giving it much of the properties of grass. This means that the stock will eat more of it and assimilate it more readily. Still, it cannot express that value in figures. It takes far less storage space than hay or other feeds, pound for pound of nutrient quality, a saving in storage space and the cost of buildings and their maintenance. Large herds can be fed in a short time with little labor, clearly a saving. Another and far greater consideration to the dairy farmer is the increased production of milk from the increased production of milk from the feeding of ensilage. It has been proven beyond controversy that cows may be made to produce milk in a constant quantity the year around by the feeding of ensilage. Yet many of the creamery men will tell you that they are receiving more than half of their butter fat in three months of the year. By the silo the farmer is enabled to put butter fat on the market when it is worth the most. The silo is one of the scientific developments which is making the farm a source of dividends the whole year around.

Replaces the Pasture.

"In one of the most productive dairying districts of Wisconsin many of the dairy men own no pasture. They feed winter and summer on ensilage. The success of the Wisconsin dairymen is a sufficient argument for silo feeding.

"The necessity of the silo is highly apparent. The reduction of pasture areas, the high cost of corn and feeder cattle has made it a serious question if there

### LEARNED GIVEN ENDORSEMENT

Omaha Bar Association Picks Him as Successor of Judge VanDevanter.

### WINS ON FIRST FORMAL BALLOT

Recommendations Are Telegraphed to Nebraska Delegation in Congress and Are Also to President Taft.

Endorsement of the candidacy of Myron L. Learned for appointment to succeed Judge Willis VanDevanter as judge of the United States district court in the Eighth judicial district was given by the Omaha bar association at its monthly meeting in the county building Saturday night.

The formal ballot was given by the Omaha bar association at its monthly meeting in the county building Saturday night. The formal ballot was given by the Omaha bar association at its monthly meeting in the county building Saturday night.

Approval of the association was given a scheme for a new system of securing jurors in the district court, devised by a special committee named for that purpose. The committee was instructed to work out the details of the plan, incorporate them in a bill and present it to the next state legislature for adoption.

Charles R. Keller offered a resolution providing that the association make a recommendation to fill the vacancy caused by the advancement of Judge VanDevanter and providing a method for electing the man who would be so recommended. His plan provided that there should be no nominating speeches, that the selection be made from the members of the association, and that a plurality vote should elect.

George W. Shields offered amendments making any lawyer in Nebraska eligible to recommendation, permitting nominating speeches and providing that a majority vote be required.

The Keller resolution as amended was adopted. It was agreed that there should be one informal ballot.

No nominating speeches were made. John L. Kennedy stated that he was not a candidate and asked that no one vote for him, saying he wished his friends to vote for Mr. Learned.

The informal ballot resulted as follows: Learned, 28; Baldwin, 21; scattering, 19; total, 78. The formal ballot resulted as follows:

Learned, 40; Baldwin, 22; Munger, 12; Brockmeyer, 11; Fawcett, 1; total, 76; necessary to choose 35.

On motion of Mr. Keller, the recommendation was made unanimous. Mr. Learned, called upon for a speech, thanked the association for its endorsement, saying the honor paid him is a great one and even greater in view of the high character and ability of others named.

Improved Jury Law.

The special committee named to devise a plan for an improved jury law which would result in a reduction of the possibility of jury corruption and raise the standard of juries, consisting of H. C. Brome, T. J. Mahoney, H. H. Baldwin and C. J. Smyth, offered two plans: Appointment by the judges of the court of a jury

### OMAHA LAWYER ENDORSED BY BAR ASSOCIATION

Hippodrome Production Will Turn Back East Here.

### EXTENDING AUDITORIUM STAGE

Preparations in Progress Here for Staging of Big Spectacle—To Present Pictures of Life on Prairies.

Omaha will be the farthest western point in the tour of the New York Hippodrome show, which comes to the Auditorium January 2. The Shubert Theatrical company decided to run the show which appeared all during the 1908 season at the most easterly theater in America on a trip this winter through the west show towns of the middle west. As the company numbers 600 and it takes a train of fifteen cars to haul the scenery, the undertaking is a stupendous one. The other cities visited are Philadelphia, Pittsburg, Cleveland, Indianapolis, Louisville, Kansas City, St. Paul, Cincinnati and Chicago.

The show is a sort to which Omaha people are little accustomed in their home theaters, but many of the members of the company have wide reputations. Marjorie is the best known. And he will have conspicuous parts in the spectacle of dramatic warriors which give the actual performance of the "Sun Dance," is also part of the organization, and a whole circus company of midgets, called "Gerson's Lilliputian Circus." The little people are caparisoned athletes and give a complete circus bill with their own miniature apparatus and tiny horses.

To Extend the Stage.

To give the spectators room, the huge stage of the Auditorium that has been used to seat hundreds of people will have to be extended out into the body of the house thirty feet and special arcs will be put in to light it.

The three numbers that make up the Hippodrome program are called the "Ball of Jewels," "Pioneer Days," and "A Trip to Japan." The entire company takes part in these combinations of dancing, acting, pantomime, and circus. Miss Albertine Raach is premiere danseuse, and Miss Nanette Flack prima donna. Marjorie and her companions will be frequently seen.

"Pioneer Days" is a presentation of life on the plains with all its picturesque features of Indians, prairie schooners, cowboys and adventurous life. The spectacle tells an exciting story of the dangers of the settler and frontiersman.

"A Trip to Japan" is a spectacle and ballet for which E. H. Burnside, stage director of the company, wrote the book, and Manuel Klein, leader of the Hippodrome orchestra, the music. Arthur Youngin, scenic artist for the Shuberts, planned a number of surprising and beautiful effects and his representation of an ocean liner putting out to sea is said to be very vivid. The concluding scene of this number is a fête of flowers which takes place in the gardens of the mikado.

"The Ball of Jewels" is more strictly a dancing number and is under the direction of Vincenzo Romeo, ballet master of the company. Miss Raach, the leader, was formerly a dancer in the Hofburg opera in Vienna.

There will be a daily matinee in the Auditorium after the opening performance, which will be Monday evening, January 2, during the week's engagement.

### MISS CROUNSE IS ENGAGED

Announcement is Made at Afternoon Tea—Lieutenant Bowen, Prospective Groom, is on Leave.

The engagement of Miss Marie Crouse and Lieutenant Storrs Bowen, artillery corps, United States army, was announced at a tea given by Mrs. George McIntyre yesterday afternoon.

The date of the wedding has not been decided upon. Lieutenant Bowen is stationed at Fort Columbia, Wash. He is spending two weeks' leave here.

### NEBRASKA LAWYERS TO MEET

Annual Session of State Bar Association Will Be Held Here December 27.

The eleventh annual meeting of the Nebraska State Bar Association will be held in Omaha December 27 and 28. The session will be held in the assembly room on the second floor of the Board of Trade building.

The annual dinner will be held at Hotel Rome on the evening of December 27. The program for the meeting follows: Tuesday, December 27, 7 p. m.—Annual address by the president, Charles G. Ryan; report of executive council on applications for membership; report of treasurer; "Needed Legislation and the Way to Obtain It," Hon. B. F. Good, judge of the district court; report of committee on legislation, B. F. Good, chairman; miscellaneous business.

Wednesday, December 28, 10 a. m.—Report of committee on judiciary, John J. Sullivan, chairman; report of committee on inquiry, T. J. Mahoney, chairman; address, "Precedents in ex-Presidents," Hon. George Whitehead of the Maryland bar, secretary American Bar association.

Wednesday, December 28, 5 p. m.—Report of committee on legal education, W. G. Hastings, chairman; address, "Nationalism, a Study of the American Nation," by Hon. Lynn Helm of Los Angeles, president California State Bar association; unfinished business, election of officers.

Worse than an alarm of fire at night is the metallic cough of croup, bringing dread to the household. Careful mothers keep Foley's Honey and Tar in the house and give it at the first sign of danger. It contains no opiates. Sold by all druggists.

### NEGRO PURSE SNATCHER

Follows Mrs. Rice, Secures Seven or Eight Dollars and Then Makes His Escape.

Wild excitement occurred and a number of men joined in the chase of a negro when the latter snatched a purse from the hands of Mrs. W. O. Rice, 2304 Howard street, at Twenty-second and Howard streets, last night.

Mrs. Rice had been downtown shopping and was walking from the car line to her home. The negro approached her from behind and jerked the purse away.

He made his escape after a pursuit of several blocks by men attracted to the scene by Mrs. Rice's cries. The purse contained \$7 or \$8.

### DESERTER CAUSES LONG CHASE

Harry Woods Fails to Free Himself of Handcuffs. PAIN FORCES HIM TO GIVE UP. Prisoner Makes His Escape from Deputy Sheriff Within Grounds of Fort Crook—Farmer Notices Breakouts.

With one bracelet of his handcuffs almost fastened in two and his wrists out and bruised, Harry Woods, deserter from the army was arrested Saturday night after escaping from a deputy sheriff at Fort Crook yesterday afternoon. Deputy Sheriff Will Condit of Dodge county arrested Woods yesterday morning in Fremont, and had brought his captor within the grounds of Fort Crook when the escape occurred.

As Condit and his captives were alighting from a car at the Fort Crook grounds, Woods jerked himself out of the deputy's grasp and ran madly away. Condit gave no pursuit, but was quickly distressed by the deserter, owing to the fact that the deputy is crippled with a cork leg. Condit hesitated to shoot at his man, who soon dodged out of sight round some buildings.

Woods effectually eluded the entire dragnet of men which was thrown out quickly from the fort to catch him, and for three hours was at liberty. He made his way to Bellevue. There he stopped at the farm house of a man named Stafford, and, concealing his handcuffed wrists, borrowed a file from Mr. Stafford. Shortly after Woods had departed, the farmer recalled having noticed an object on his caller's wrist, and when he heard of the deserter's flight, he telephoned his information to the fort.

### PERSONAL PARAGRAPHS.

Caught in the Act. Captain Sheehan and Detective Maguire at South Omaha finally arrested Woods at a lonely spot in the outskirts of South Omaha. The officers found the fugitive sitting on a boulder, thoroughly exhausted and in great pain, with blood dripping from his lacerated and wrenched wrists. The man gave up readily. He said he had saved for an hour at one of his fettering bands, cutting the iron almost through. When he thought the bracelet was weakened so that it would break, he began pounding the handcuffs upon the boulder. Instead of breaking the handcuffs slipped notch by notch tighter upon his wrists with every blow. The officer's cuffs had continued to be fastened from pounding and continued to use his file, he probably would have succeeded in freeing his hands.

The arresting officers mercifully unlocked the cuffs from their captive, and placed him under medical attention. He was then taken to the fort, where he will be held for trial.

At the Omaha police station Deputy Sheriff Condit declined to give any detailed information concerning Woods' original desertion.

Dr. Perry Joseph Green, who for the last three weeks has been giving courses of lectures before the Omaha Fellowship, leaves today for Chicago. After visiting a number of the big middle west cities Dr. Green goes into the southern states and thence to the Pacific coast to his home in Portland, Ore. His trip will consume nearly a year.

# What About Brain Food?

## This Question Came Up in the Recent Trial for Libel.

A "Weekly" printed some criticisms of the claims made for our foods. It evidently did not fancy our reply printed in various newspapers, and brought suit for libel. At the trial some interesting facts came out.

Some of the chemical and medical experts differed widely.

The following facts, however, were quite clearly established:

Analysis of brain by an unquestionable authority, Geoghegan, shows of Mineral Salts, Phosphoric Acid and Potash combined (Phosphate of Potash), 2.91 per cent of the total, 5.33 of all Mineral Salts.

This is over one-half.

Beunis, another authority, shows "Phosphoric Acid combined" and Potash 73.44 per cent from a total of 101.07.

Considerable more than one-half of Phosphate of Potash.

Analysis of Grape-Nuts shows: Potassium and Phosphorus, (which join and make Phosphate of Potash,) is considerable more than one-half of all the mineral salts in the food.

Dr. Geo. W. Carey, an authority on the constituent elements of the body, says: "The gray matter of the brain is controlled entirely by the inorganic cell-salt, Potassium Phosphate (Phosphate of Potash.) This salt unites with albumen and by the addition of oxygen creates nerve fluid or the gray matter of the brain. Of course, there is a trace of other salts and other organic matter in nerve fluid, but Potassium Phosphate is the chief factor, and has the power within itself to attract, by its own law of affinity, all things needed to manufacture the elixir of life."

Further on he says: "The beginning and end of the matter is to supply the lacking principle, and in molecular form, exactly as nature furnishes it in vegetables, fruits and grain. To supply deficiencies—this is the only law of cure."

The natural conclusion is that if Phosphate of Potash is the needed mineral element in brain and you use food which does not contain it, you have brain fag because its daily loss is not supplied.

On the contrary, if you eat food known to be rich in this element, you place before the life forces that which nature demands for brain-building.

In the trial a sneer was uttered because Mr. Post announced that he had made years of research in this country and some clinics in Europe, regarding the effect of the mind on digestion of food.

But we must be patient with those who sneer at facts they know nothing about.

Mind does not work well on a brain that is broken down by lack of nourishment.

A peaceful and evenly poised mind is necessary to good digestion.

Worry, anxiety, fear, hate, etc., etc., directly interfere with or stop the flow of Ptyalin, the digestive juice of the mouth, and also interferes with the flow of the digestive juices of stomach and pancreas.

Therefore, the mental state of the individual has much to do (more than suspected) with digestion.

This trial has demonstrated:

That Brain is made of Phosphate of Potash as the principal Mineral Salt, added to albumen and water.

That Grape-Nuts contains that element as more than one-half of all its mineral salts.

A healthy brain is important if one would "do things" in this world.

A man who sneers at "Mind" sneers at the best and least understood part of himself. That part which some folks believe links us to the Infinite.

Mind asks for a healthy brain upon which to act, and Nature has defined a way to make a healthy brain and renew it day by day as it is used up from work of the previous day.

Nature's way to rebuild is by the use of food which supplies the things required.
