In many cases you must locate a steamdriven factory in the outskirts of a city away from the heart of things. Either municipal laws prescribe this or citizens protest against the smoke nuisance, noise, dirt, and possible boiler or flywheel explosion.

You can locate in the heart of activity by installing electric motor drive, using our reliable electric power.

Place your factory where access to raw material, good shipping facilities and efficient employees, can be readily secured.

We guarantee greater production with the same power than is possible with steam engine and shafting drives, or the same production with less power consumption.
