PLAY GOLF AT ATLANTIC CITY

All Cracks of Country Will Compete ATLANTIC CITY, N. J., Oct. 28.-The regular fall golf tournament of the Atlantic City Country club will take place November 2, continuing for two days. Ininvitation affair for members of the United States Golf association.

It is expected that all the cracks in the east will take part, as it practically will mark the close of competition on the northern links this neason.

Big Returns.

ALL FROM A GRAIN OF CORN

Many Things the Wizards of Science Extract from Cereal.

Range of Unefulness from Food to silvering glass for mirrors and in liquid Fireworks, Automobile Tires,

Rubber Heels and Hair Toute.

There once was a time-and not such great many years ago at that-when intian corn was considered fine feed for fattening cattle and poultry, and that was about all.

Just see what the winard of science otherwise the food expert and chemist, is able to do with a grain of corn today. He separates the shell or hull from the starchy inside, or endosperm, and also removes the heart, or germ, of the grain, and from these three different substances he makes such a variety of products that they must not be written down in one long list. Some of them, such as bread and syrup, have a food value. Others, such as fireworks, soap and rubber heels,

Back in 1831 Dr. H. W. Wiley, chief of the bureau of chemistry. Department of Agriculture, said: "Corn, the new American king, now supplies us with bread, meat and sugar, which we need, as well as with whisky, which we can do without." Today he might add to the foregoing table syrup, oil for frying, candy, gum, feed cake for cattle, preserves and jelly. And then, turning for a moment from the food value found in a grain of corn to the other substances and compositions derived from that same grain, Dr. Wiley might add laundry starch, the new "safe and sane" Fourth of July fire-crackers known as "sparklers," automoolle tires, rubber heels, soap, paint, varnish and hair tonics.

Wonderful!" you may remark. The wirard of science says it is all very simple. The secret consists in knowing just how to divide the grain of corn In order to abstract fine avrup from one part, starch from another, oil from another and so on without getting them mixed.

Substitute for Rubber.

"How do they make automobile tires out of grains of corn?" may be asked. To answer frankly and honestly, they don't. But out of the very heart, or germ, of the grain a certain oil, known as corn oil, is extracted. Then by a vulcanlzing process this oil is converted into a rubber substitute, which is used in the insulating material, rubber heels, automobile tires and rain coats. As for the corn oil itself, it is used in the manufacture of soap, soft soap and soap powders, officioth and leather, paints and

feed. The endosperm is separated into
its component parts, starch and gluten. From the starch the three following classes of products are derived: Dry starches, corn syrups and sugars and the dextrines. The syrups and sugars are obtained by a process known as hydroliging the starch. This simply means the chemical decomposition of the starch and the formation of new compounds when the starch is absorbed by water. A subsequent refining and evaporating process is necessary for the production of the corn syrups and sugars. The dextrines, otherwise the gummy compounds formed by the action of heat on starch, are produced from the corn starch by a process of roasting.

Career of the Grain Germ.

Getting back to the very germ of the grain of corn, it is interesting to follow its career still further. When the germ which contains the oil is separated from the remaining portion of the grain it is dried, ground and subjected to hydraulic Demorcat. pressure whereby the oll is extracted. The oil is filtered after settling and then still further refined to get rid of any free, fatty acids to improve the taste and to lighten the color. Then this oil is ready for frying and cooking purposes, salad oil, for shortening for bread and cake, for pharmaceutical purposes, such as ammonia liniments and camphorated

The various starches obtained from the grain of corn are almost too numerous to mention, but among others are the fa miliar corn, laundry and confectionery starches. They have a multitude of uses; for foods such as jellies and puddings, baking powder, pastes, sauces, candles, gumdrops, lozenges, for brewing beers and ales, for stiffening and finishing yarns and fabrics in textile industries, in paper manufacture as a filler, finisher and size, for cosmetics, asbestos, scaps and adhesives and in the manufacture of coni briquettes. The dextrines, made by roasting the

starch, are used in the textile industries for strengthening the fiber and finishing the fabrics, for cloth, carpets, twine, for thickening colors, for callco and other printing, for leather dressings, paster food, sauces and paper, for gums and glues, ink, muchages and adhesives for coffee and rice polishing and finally in the new Fourth of July fireworks known as "sparklers."

Making and Use of Corn Syrup. To make the corn syrup the starch is mixed with water and heated under pressure to form a Bould composed of about equal parts of dextrine and corn sugar. or glucose. When I arrived in New York the day

Rorer, "I have not used one ounce, of

and even the "alk." Laboratory tests made at Columbia university. New York, have shown that gas can be made from corn cobs and corn stalks more chesply than from coal. In Berlin a German smaller manned brewsen has invented a process for making all kinds of paper from corn stalks. Secretary James Wilson of the Department of Agriculture announced some time ago that simple methods of fermentation will result in the production of eleven galions of alcohol from one ton of corn cobs. J. T. Schaffer of Rochester, N. Y., has invented a process for making firsproof railway ties out of corn stalks. Cellulose, smokeless powder and dynamite are being made from corn stalks. The cellulose is used as a lining for battleships and crujsers to serve as an automatic leak-stopper in case of a puncture below the water line.—New York would have much difficulty in getting at the facts. Our chief him is to protect the public troin graft and we should work together for that purpose.

Kansas Politicians and Epteures
Give Crow Diet a

Boost.

A good many Kansas politicians have eaten crow, but no one of them has ever pretended for a minute that crow meat was good to eat. In fact, so many senerations have maintained that crow was unfit for human consumption that it has become a byword. Whenever a politician is defeated he "eats crow." Undonbtedly some people have eaten crow under dire necessity, but they never maintained it

was good. But Prof. L. L. Dyche, the "little father" of the fish and game, says crow is good to eat. Prof. Dyche is now the champion of the crow as well as the champion of the German carp.

"The fiesh of the young crow is as good as that of the guinea hen." said Prof. Dyche. "It is a little dark, but it has a good flavor and is fine of texture. Put up a young crow and a guinea on the Mr. Brush is HI at a Chicago

> his delay in answering Mr. Johnson's let-Travis Still in

Game as One of the Golf Players

NEW YORK, Nov. 4 .- Walter J. Travis is still our most reliable golf player and on the whole he is probably still the best player, so that a comparison between him and Hilton at once suggests itself," says Leighton Calkins in on appreclative article on the American chamsaid. "There are any number of birds pion written for a leading English golfing journal, "At a distance they look a Most people think that quall, the dove good deal alike on the links, and even and prairie chickens are about the only at close range. I do not refer, of course, to their style of play, but rather to a similarity in appearance and dress and to the phlegmatic and businesslike way in which they go at the game. Hillton plays a little more rapidly, but they are both careful, and head work plays an important part in the game of each of them. I think Travis is the only player in this country whose direction does not suffer in comparison with Hitton. On the other hand, Hilton has considerably more power, and, as we say, more 'shote in his bag."

This statement may surprise American readers, because over here Travis has the reputation of being able to play almost any kind of a shot. This is a great mistake, for, as a matter of fact. Travis has fewer strokes at his command than any living player of equal reputation players know that they often must rely Analyzing the play of the two, Mr. Callins finds that "Hilton, with the same splendid discretion that has atways been an integral part of 'Travis' game, and with the power needed for these emergency shots, has an advantage right up to the hole," and that the Atourtean is the superior on the short approaching ton's more powerful game through the green, taken in connection with his sound putting, totals a slight advantage, day in and day out, over Travis' average best play." All of which is extremely interesting because the Garden City expert was the one man, after Jerome Travers, that the gallery at Anawamia would have liked to see in the same bracket as the Englishman and about the only one of the leading players he did not defeat during his ten almost successive days of competition.

Mr. Calkins concludes his eulogium very neatly, declaring that Mr. Hilton won our championship because he played not only more consistent golf, but better golf. than any player at Apawamis. "America has never had a more worthy champion.

A Trick of the Florist's Tende. A Brooklyn florist was showing a friend around his greenhouse. The friend noticed that there were two hives of bees in the house and asked the florist why he kept bees.

"In the winter I grow cucumbers under the glass here."
