

Nebraska Debating Teams to Meet Minnesota and Iowa

LINCOLN, Neb., Nov. 11.—(Special Correspondence.)—The honor of representing the state university in the two annual forensic contests at the Central Debating League, (Illinois, Iowa, Minnesota, Nebraska and Wisconsin), this year with Iowa, at Lincoln, and with Minnesota on December 4, was awarded on October 21 by Prof. E. H. Conant, M. M. Fox, J. E. Le Rossignol, Edwin Maxey G. A. Stephens and G. O. Virtus to the Lincoln High School Debating Team.

Top Row, Left to Right—Nebraska Debating Team Against Iowa—Joseph Goldstein, Law '13, Dawson; Ralph W. Garrett, '12, Madison; Anna H. Raymond, Law '13, Norfolk; Clarence L. Clark, '13, Lincoln. Lower Row, Left to Right—Nebraska Debating Team Against Minnesota—Jean Hargrave, '12, Wymore; Clifford L. Rein, '13, Loup City; Benjamin Harrison, Law '13, Dunbar; Harold A. Prince, '13, Grand Island.

Nebraska against Iowa—J. W. Garrett, '12, Madison; Joseph Goldstein, Law '13, Dawson; A. R. Raymond, '11, Law '13, Norfolk; C. L. Clark, '13, Lincoln. Nebraska against Minnesota—T. Jean Hargrave, '12, Wymore; H. A. Prince, '12, Grand Island; C. L. Rein, '12, Loup City, and Benjamin Harrison, Law '13, Dunbar.

As usual, these honors in argumentation and law were won by high rank scholars. On the 1910 teams, for example, the three leaders in the class of 1911, College of Law, were members of the Intercollegiate Debate Seminary, two of whom had been principals on teams; Joseph T. Votava, now of Omaha, who was on the team three years, and George N. Foster, now in the University of Chicago Law school, who was on the team two years, and in the College of Arts, A. H. Raymond graduated with unusually high Phi Beta Kappa honors.

The debates this year will be on the following question: "Resolved, That the United States should adopt a policy of shipping subsidies." Nebraska will have the affirmative against Iowa and the negative against Minnesota.

To Debate with Iowa.

Ralph Wallace Garrett, '13, of Madison, was graduated from the Madison High school in 1909. In the university he has taken honor rank as a scholar, his record being "excellent"—that is, 90 per cent or more—for three years. He represented the sophomore class in the intercollegiate debate in 1909-10, and was one of the members of the Nebraska Debating Team in 1910. Mr. Garrett belongs to the Phi Alpha Tau, Phi Alpha Xi, the debating fraternity, and to Alpha Theta Chi.

Joseph Goldstein, law '13, of Dawson, is a graduate of the Peru Normal school, class of 1910. At the Peru City academy he won a prize for excellence in public speaking and took first honors in scholarship in the class of 1906. Before going to Peru he taught in Richardson county schools. On the Peru team he debated with the Warrensburg (Mo.) Normal school in 1906 he won the individual honors. He entered the College of Law last year. He was alternate on the sophomore team in the interclass debates of 1910-11.

Ann Richard Raymond, '11, law '13, of Norfolk, was graduated from the College of Arts last June with the uncommonly high scholarship record of 95 per cent for the four years. He was one of the scholars in the class of 1909, and ranked in the freshman law class last year. In university affairs outside of the class room he has been prominent. His class made him president in his senior year and he was senior managing editor of the 1911 "Cornhusker." His first appearance in public debating at the university was in 1909, when he was a member of the junior team that captured the interclass championship. Last year he did powerful work on the team that won the decision over the University of Illinois on the open shop end of the closed against open shop discussion. Mr. Raymond moved to the university from the South Dakota State of Mines. He is a member of Phi Delta Phi, the debating fraternity, and Delta Sigma Rho, the honorary fraternity for intercollegiate debaters. Since last June he has been assistant to Chancellor Samuel Avery.

Clarence Leon Clark, '12, of Lincoln, was appointed to the Intercollegiate Debate Seminary in his sophomore year and was alternate on the team that won from the University of Wisconsin on the closed shop side of the debate at Lincoln December 2, 1910. He was a member of the freshmen team that won the interclass championship of the university in 1908-09. Mr. Clark is from the Lincoln High school, which he represented in debate with the Omaha High school in 1907 and with the Beatrice High school in 1906. He was also class orator. He has been a member of the University Glee club and is active in the Dramatic club. He also belongs to Phi Alpha Tau, the debating fraternity.

To Debate with Minnesota.

Thomas Jean Hargrave, '12, of Wymore, has attained unusually high rank in scholarship. He is doing the four-year course in three years and has attained a grade of "excellent" in practically all his courses. He is a graduate of the Wymore High school, which for several years has emphasized training in argumentation and debate, winning the championship of the southeastern district every year.

school and ranked as an honor student at the university. This is his first year on the inter-collegiate Debate Seminary. He intends to follow his father, W. A. Price of Grand Island, to the legal profession. Mr. Price belongs to Delta Tau Delta.

Clifford Louis Rein, '12, of Loup City, won a place in the inter-collegiate Debate Seminary in his freshman year and last year he was one of the three Nebraskaans who, arguing for the open shop, won from the University of Illinois at Urbana. Mr. Rein ranks high as a scholar, his grades averaging "excellent." He was graduated from the Loup City High school in 1906 with scholarship honors that won him free tuition in several denominational colleges at the state. He represented the school in 1908 and 1909 in contests of the Nebraska High School Debating League. He was a member of the Inter-Class Debating board last year and is a member of the Latin club, the Platform club, of Phi Alpha Tau, the debating fraternity, and of Delta Sigma Rho, the honorary fraternity, which limits its membership to representatives of colleges of intercollegiate debates and inter-collegiate oratorical contests.

Benjamin Harrison, '13, of Dunbar, fourth member of the team, was graduated from Peru Normal school in 1907, in which year he was on the debating squad. He was principal of the Havanna High school in 1908-09, when Havanna won the championship of the west-central district of the Nebraska High School Debating League, and he was principal of the Plattsmouth High school in 1909-10, when Plattsmouth won the championship of the eastern district, its representative in the state debate. Miss Marie Douglas, winning the state championship. Mr. Harrison is a member of the Platform club and of Phi Kappa Psi.

Dr. Charles T. Graham Rogers, medical examiner of the State Department of Labor in New York, has spoken of hair puffs and "rats" in a manner neither enigmatical nor circuitous. Dr. Rogers is entitled to rank with Abou Ben Adhem, in that he loves his fellow men. If not the fellow men, at the session of the investigating commission in Manhattan he called attention to some of the diseases that workers in human hair factories were exposed to. Being in deadly earnest, the doctor cast to the vagrant earnest the grammatical admonition that a proposition is a poor word to end a sentence with, and went straight to the point. Not only are wearers of hair puffs and rats subject to ordinary and extraordinary diseases of the scalp, but, according to his view, they further lay themselves liable to tuberculosis, chronic gastritis, intestinal diseases, and abscesses of the stomach.

There is nothing more convincing than the straightforward ultimatum of a medical authority, comments the Washington Post. How it works out in detail is another matter. The exact manner in which chronic gastritis can eventuate from the comparatively innocent, though admittedly frivolous decoration of the snowy brow with borrowed locks is difficult to determine. If hairpins contained the elements of inoculatory disaster, it were a matter of easy recognition. Some men there are who have, unbidden, witnessed the other sex in wild disarray, but none are of record who have not fled in dismay before the mumbled protest against their undesired presence. But that the tender mouth that holds the hairpin should chew the puff is a secret known only to the wearers and the good doctor himself.

What shall it be, then—"rats" and the heightened charms that go therewith, together with the possibility of leprosy and tubercular plague, or the smooth front, sans germs and embellished pulchritude? The doctor has had his say. It is up to the wearer of the mysterious and delicate front. Far be it from us to settle the momentous question, who have qualified before accidental beauty bedecked in Chinese pigtail or whatnot, asking only to gaze, and inquiring not at all as to the origin of seductive tendria that might have been reaped from Gorgon's head or Argive Helen's brow, for all we cared!

place, sits down behind the table, folds his hands and awaits the immediate silence. As he speaks his blue eyes shine with an extraordinary brightness, his face is illuminated and this illumination seems to be reflected in the faces of his listeners, or his words are a call to hope and action.

Bergson repeats and develops the ideas that the capacities of mind, the potentialities of all individuals, are the same. The diversity among individuals he attributes mainly to a lack of individual effort which may arise from a variety of causes, cerebral derangement being an important one.

Memory a Peculiar Thing.

Prof. Bergson enunciates a startling theory concerning memory, which he describes as being an ethereal organ outside the body. He likens this expression of faculty to a top, the point resting upon the brain, the body being above and outside the brain. All experiences are registered in the organ, nothing is forgotten. Difficulties of memory arise from the condition of the point of the "top," the organ, which refuses to function normally under the command of the will.

"Memory," says Bergson, "is no more inside the head than the music of all the great composers is inside the piano. A piano is an instrument by means of which a musician may give expression to musical compositions, according to the capacity of the musician and the quality of the piano. The brain, like a piano, can be played upon and made to express an infinite number of memories."

Radium a Dangerous Plaything.

M. Becquerel is still disagreeably affected by the strange powers of radium which gave him the serious burn on his breast some time ago. He has carried a tube containing several decigrams (the equivalent of a decigram is about one and one-half grains) in his vest pocket for six hours wrapped in paper and enclosed in a pasteboard box.

Ten days afterward the illustrious physicist perceived that the radiations had passed through the tube and through his clothing producing a red spot on his skin. The spot grew darker and eleven days later an ulcer appeared which healed in forty-nine days, but has left effects. That was the first example of the destructive power of the ray upon the living cell.

Madame Curie's fingers with which she handled tubes containing radium combinations have at times become hard and white and most painful. The skin fell off and after a new skin had formed and the wounds cured the pains continue from the mysterious radioactive rays.

New Control of Wireless.

Two Italian electrical engineers living in France, Signors Bellini and Tosi have devised an apparatus for fixing the direction of wireless sounds so that vessels appearing a coast at night or in a fog, especially so that they are not able to take bearings by lighthouses and configurations of the land may calculate where they are from musical notes sounded through the tube and through the receiving instrument can be manipulated so that the direction of the maximum of sound defines within a quarter of a compass point the location of the sounder. The French government will set up three stations for experiment and the steamships Provence and Espagne are to be equipped with receivers.

Driftwood.

There is only one girl in the world, but the census doesn't substantiate the fact. Many a maid in sweet sixteen simply because fifteen before her promised to be sisters to him.

It's easier for a girl to refuse a man than to refuse his suitcases. A man has many a fool, but seldom have fools made money.

When a woman is caught in an argument, she'll declare that there's no use talking, but she'll not prove it.

Two can make a quarrel, but a third party is usually the cause of it all—Judge.

HAYDEN'S Sales of Keenest Interest to Economical Buyers for Monday

Half Price Sale Tailored Suits, Monday, Nov. 13th. See Ad on Page 3 Editorial Section.

Linen Specials for Monday Selling

Unhemmed Pattern Table Cloths, pure flax, size 8x4, worth \$3.25 each \$2.50

BERGSON HYPNOTIZES PARIS

Society Women Mix with Students to Hear Him Talk.

HAS SOME STARTLING THEORIES

Insists that Memory is an Ethereal Organ Outside Body—Hadiup is Proving Itself to Be Dangerous Plaything.

PARIS, Nov. 11.—Henri Bergson is just now the yogue of the fashionable world. His lectures room at the Sorbonne seating some hundreds in affluence with society women who queue into a foot of hard bench between students of the university to hear his philosophic utterances.

The appearance of the little white-haired man causes a murmur of greeting and expectation. He walks quickly to his

place, sits down behind the table, folds his hands and awaits the immediate silence. As he speaks his blue eyes shine with an extraordinary brightness, his face is illuminated and this illumination seems to be reflected in the faces of his listeners, or his words are a call to hope and action.

Bergson repeats and develops the ideas that the capacities of mind, the potentialities of all individuals, are the same. The diversity among individuals he attributes mainly to a lack of individual effort which may arise from a variety of causes, cerebral derangement being an important one.

Memory a Peculiar Thing.

Prof. Bergson enunciates a startling theory concerning memory, which he describes as being an ethereal organ outside the body. He likens this expression of faculty to a top, the point resting upon the brain, the body being above and outside the brain. All experiences are registered in the organ, nothing is forgotten. Difficulties of memory arise from the condition of the point of the "top," the organ, which refuses to function normally under the command of the will.

"Memory," says Bergson, "is no more inside the head than the music of all the great composers is inside the piano. A piano is an instrument by means of which a musician may give expression to musical compositions, according to the capacity of the musician and the quality of the piano. The brain, like a piano, can be played upon and made to express an infinite number of memories."

Radium a Dangerous Plaything.

M. Becquerel is still disagreeably affected by the strange powers of radium which gave him the serious burn on his breast some time ago. He has carried a tube containing several decigrams (the equivalent of a decigram is about one and one-half grains) in his vest pocket for six hours wrapped in paper and enclosed in a pasteboard box.

Ten days afterward the illustrious physicist perceived that the radiations had passed through the tube and through his clothing producing a red spot on his skin. The spot grew darker and eleven days later an ulcer appeared which healed in forty-nine days, but has left effects. That was the first example of the destructive power of the ray upon the living cell.

Madame Curie's fingers with which she handled tubes containing radium combinations have at times become hard and white and most painful. The skin fell off and after a new skin had formed and the wounds cured the pains continue from the mysterious radioactive rays.

New Control of Wireless.

Two Italian electrical engineers living in France, Signors Bellini and Tosi have devised an apparatus for fixing the direction of wireless sounds so that vessels appearing a coast at night or in a fog, especially so that they are not able to take bearings by lighthouses and configurations of the land may calculate where they are from musical notes sounded through the tube and through the receiving instrument can be manipulated so that the direction of the maximum of sound defines within a quarter of a compass point the location of the sounder. The French government will set up three stations for experiment and the steamships Provence and Espagne are to be equipped with receivers.

Driftwood.

There is only one girl in the world, but the census doesn't substantiate the fact. Many a maid in sweet sixteen simply because fifteen before her promised to be sisters to him.

It's easier for a girl to refuse a man than to refuse his suitcases. A man has many a fool, but seldom have fools made money.

When a woman is caught in an argument, she'll declare that there's no use talking, but she'll not prove it.

Two can make a quarrel, but a third party is usually the cause of it all—Judge.
