

Long Awaited Event Comes To Pass!! MONDAY MORNING, NOVEMBER 27 THE GREAT CHINA SALE Commences at KILPATRICK'S

Orders placed many months ago arrived recently—ready for your approval at last. Alterations delayed us, but you will be repaid for waiting. NEVER BEFORE SUCH A MAGNIFICENT COLLECTION, IMPORTED DIRECT BY US. MOST OF IT IS ABSOLUTELY UNIQUE AND TOTALLY UNLIKE ANYTHING TO BE SEEN ELSEWHERE. This then is an invitation to YOU to attend the sale in our NEW ADDITION MONDAY AT 8:00 A. M.

Those who have attended China Sales previously know that it pays to be on hand early. Never was early attendance so necessary as at this time. Some of the pieces are so elegant and unusual, and PRICED SO LOW that they will surely sell quickly.

NOVEL JARDINIERS—Hungarian Peasant Pottery—quaint in color and design. From Dresden—New desk sets, comports, plates, tea sets, etc. charming to look at. England contributes—Quaint Pitchers, odd Teapots, new Doulton ware, dinner sets, etc., etc. You will be pleased with this manufacture.

Haviland and Cie—Sent new designs in dinner and breakfast ware—always attractive. Ladies' boudoir breakfast sets complete on tray—Appetizing even to look at—French Hand painted plates such as you usually see priced at \$1.00 will be marked **59c**

You will want some of these—4 weeks till gift time.

Gift suggestion, reminds us to mention, New Manicure Comb and Brush Trays—also toilet articles, all hand painted—and all at very low prices—a good suggestion.

Baccarat and Crystallier productions, the newest in table glassware. Coasters for glass for use on polished tables, Monday **10c**

Some would sell at 25c.

Far away India sends handwrought Benares Brass Jardinières, rather rare in this section. You will want one piece at least.

Wonderful Imara bowls from Japan and novel wicker Jardinières—these have drawn

many admiring comments from those who saw them in window. And the little children will be simply delighted with the Cups, Plates, Oatmeal sets, etc., containing catchy little rhymes, 10 cents only for these.

New flower holders of glass for table use will add to the decorations.

No attempt here to quote prices—it would avail little—we could not convey any satisfactory idea of values. We know THAT THE SELLING WILL BE EASY. Please come in the morning.

Don't miss the Hair Brush Sale—Rubber Cushioned bristle brush similar to "Ideal," usually 75 cents will go at **39c**

Special Sale on Thanksgiving Linens Monday!

We show some very attractive pieces for the table, etc., in our new window.

The Doll Congress is in session on the Second Floor. Bring the little ones. Our aggregation is different, quainter, cuter and more unique than what you usually see.

Thos. Kilpatrick & Company

TWO Personally Conducted Tours Every Week to Sunny California.

Personally conducted tourist sleeping cars leave Omaha every Wednesday and Friday for San Francisco and Los Angeles on the China and Japan Mail. These Tours are organized and handled under the direct management and supervision of the Tours Department, which fact is a definite assurance of the very best service and a guarantee that the published itinerary will be carried out. These personally conducted tourist sleepers leave Omaha Union Station and run on the following schedule:

Lv. Omaha..... 4:05 p.m. Wed. Fri.
Ar. Cheyenne..... 11:30 a.m. Thurs. Sat.
Ar. Ogden..... 6:30 a.m. Fri. Sun.
Ar. San Francisco... 2:50 p.m. Sat. Mon.
Ar. Los Angeles.... 8:45 a.m. Sun. Tues.

Via

Union-Southern Pacific

Standard Route of the West.

Special attention is called to the fact that the trip from San Francisco to Los Angeles is particularly interesting as the route traveled is along the coast line.

Every inch of the way to California is protected by Electric Block Signals. Dustless, perfect roadbed. Excellent Dining Cars.

For information relative to fares, routes, reservations, etc., call on or address

FAREWELL TO THE TURKEY

Joyous Bird of Thanksgiving Starts a Census Dirge.

WOEFUL DECREASE IN CROP

Owing to a Combination of Evils the American Turkey Supply in Ten Years Has Been Cut in Half.

Probably the most cheerless information conveyed by the census is that soon we may no longer know the great American table bird. E. Dana Durand, director of the census, has just finished counting the American turkey, and he finds his ranks decimated in every commonwealth of the union, save in four distinct intermountain states, where, hemmed in by insurmountable barriers of transportation, he has escaped the cold-storage plant and canning factory.

Between the cholera, the "blackhead," and the ax, this bird that has gobbled his way into the affections of the American people is wasting rapidly. Perhaps soon his name will be but a memory, and future generations may know him but by the picture on the can. This much is certain: Unless times will not change for the better, there will be not enough of him left to go around for a bite apiece on Thanksgiving day, and there will be no such real turkey in the gaudily labeled cans as there is or true diamond back in the average dish of terrapin today.

He, indeed, would be an optimist who, under such distressing circumstances, could sit down to his Thanksgiving dinner in the proper spirit.

In ten years the American turkey supply has been cut about in half. The census of 1909 shows that where there were in that year 5,281,695 turkeys to go around 2,640,847 hungry American mouths, there were, according to the recent census count, but 2,668,988, a clear loss of not far from 2,000,000 turkeys, whereas the hungry mouths have increased to more than 31,000,000.

Why This Falling Off?
To stand old Massachusetts, where the stern Pilgrim Father set the Thanksgiving fashion when he solemnly shouldered his fowl and potted a hefty gobbler out of the primal oak, there were but 2,667 turkeys to answer the roll call of

Spirits for Rheumatism

Time of ailments in the treatment of rheumatism has proved an innovation among the medical profession. When afflicted with certain other ailments and taken properly it is said to be an almost infallible cure for rheumatism and backache. Here is the formula. From our drug store get one ounce of Toris compound of original sealed package and one ounce of syrup of Resorcinol compound. Take these two ingredients home and put them into a half pint of good whiskey, shake the bottle and take a tablespoonful before each meal and at bed-time. Resorcinol comes in Toris compound in stock, it will get it in a few hours from his wholesale house. Don't be influenced to take some patent medicine instead of this. Insist on having the genuine Toris compound in the original one ounce sealed, slow package—Adv.

Census Director Durand on April 15, 1910, the leading turkey states of the union in 1909 were Texas with 448,071, Missouri with 490,965, Illinois with 446,020, and Iowa with 424,206 turkeys. But ten years later, in 1909, Texas had 250,005 fewer of the great American table bird; Missouri, 155,999; Illinois, 255,095; and Iowa, 203,145 less. Here are the four leading sources of turkey supply in the United States, whose aggregate output of turkeys in 1910 was nearly 1,000,000 birds less than it was ten years ago.

The Ohio turkey crop dropped off 200,209 birds; the Kansas crop 190,947; and thus continues the doleful story until you get down to Rhode Island, where the population has increased 26 per cent and the turkeys have decreased 215 per cent; and where there are 296,319 persons to the square mile and only 1,109 turkeys in the whole state.

In only four states did the turkey really increase in the last ten years. That was in Idaho, where the increase was from 10,211 to 14,774; in Wyoming, where the gain in ten years aggregated 2,218; Montana, where the increase was from 12,427 to 14,455; and North Dakota, where 28,072 turkeys in 1909 have grown into 61,473 by 1910.

Disease and Race Sheets.

Why did the turkey increase in these four states, while his numbers fell off from 29 to 69 per cent in every other state of the union? The rate sheets of the railroads point out the answer. As disease made turkey raising on a large scale almost impossible in some of the eastern states, the middle west and the south were drawn upon by the cold storage companies for turkeys in great numbers. Railroad rates governed this great movement of dressed turkey, and here, at least in part, is the answer to the question why the turkey crop has increased in the intermountain states named, while in the rest of the country it has been reduced one-half. The transportation rates from the turkey farms of Texas to the cold storage plants in California, in Boston, an average distance of 2,243 miles, or fifty-six hours, is \$1.93 per 100 pounds in carload lots of 20,000 pounds. The rates for the same product and same service from points in the four intermountain states named to New York, an average distance of 2,296 miles, or sixty-three hours, is \$2.50 from Montana and \$2.75 from Idaho in carload lots of 24,000 pounds. The freight rates on less than carload lots from these two states are considerably greater in proportion than from Texas.

But, after all, inequalities in freight rates alone do not explain the turkey phenomenon. It is entirely plausible that states should remain relatively untouched as long as the southern, central and middle western states can supply the needs of the country at the present range of prices, but it does not explain why farmers in the turkey-depleted states have not increased their supply instead of letting it run down.

In the case of chickens, ducks and geese this would be a simple problem—merely a matter of setting more hens or buying more incubators. With turkeys it is different. There are more fertile eggs in a turkey setting than there are in a setting of chicken eggs, so agricul-

tural experts tell us, and you can grow richer on paper raising turkeys than raising chickens. But it has gotten so now that in some states you can raise turkeys only on paper.

His Two Appendices.

The trouble with the turkey is his appendix, rather his appendices, for fowls have two of these bothersome incumbrances. It appears there has come into the land in the last decade or two an organism—to be exact, a protozoan—which is thoroughly at home with the chicken and leaves on this host practically no ill effects, but which is deadly to turkeys. It makes, first thing, for his turkeyship's two appendices, enlarges and then chokes them up, mottles the liver and works so much general distress that the plagued and weakened bird lies down and dies. This disease is called enteropathitis, but it is known and dreaded wherever they raise turkeys as "blackhead," because, frequently, at one stage of the disease, the head of the stricken bird turns black.

When this protozoan gets into a flock of turkeys, it usually kills 50 per cent of the poult and about 20 per cent of the old birds. It is "blackhead," say the experts of the Department of Agriculture, that has put New England out of the turkey business. Rhode Island once was famous for the number as well as the quality of its turkeys. Now look at it. Census Director Durand could find but 1,129 in the whole state and they were held at the exorbitant price of \$1.15 apiece.

But there must be other causes than "blackhead" that are responsible for the dwindling in ten years of 5,000,000 turkeys down to 2,000,000. For all of the states of the union, save the four intermountain states, show decreases ranging from 29 to 69 per cent since 1900. Much of this territory, especially in the south, is free from "blackhead," and the trouble here seems to be the sheer inability to raise turkeys equal to the demands of the cold storage plants for distribution throughout the country. The turkey is an easy bird to hatch, but a difficult one to bring through the poult stage, and the farms in the uninfected territory, if appears, are simply unable to replenish the stock taken annually by the cold storage plants to supply those sections where disease has wiped out almost all of the native flocks.

Hence the Upward Price.

This situation, naturally, has led to a general and very marked increase in the price of turkeys.

The average price of turkeys in the middle west is between \$1.75 and \$2. On the Pacific coast turkeys are valued in California at \$2.20 and in Washington at \$2.25. It is in the east, however, where fancy turkey prices prevail. Pennsylvania's turkeys at \$2.20 are cheap, compared with Massachusetts' 2,645 birds which the census reports value at \$1.20 apiece, and compared with Connecticut's, at \$1.41 a head. In the master of prices Census Director Durand puts the blue ribbon for 1910 on little Rhode Island, whose 1,129 turkeys are valued at \$4.00, or \$1.15 each. What another ten years will show is a question. The Department of Agriculture does not undertake to answer it. The ravages of "blackhead" are spreading and with the demands of the cold storage

RAILROADS EXHIBIT AT THE CHICAGO LAND SHOW

Union Pacific advises relative to the Chicago Land show, which is now in progress and which will continue until December 3, are to the effect that the crowds are large, but not much, if any, in excess of those that attended the Omaha Land show, held recently. In Chicago during the first six days the attendance aggregated 65,000.

The Union Pacific and its affiliated lines have spent \$30,000 in making exhibits at the Chicago show. They have constructed two theaters in the annex of the Coliseum, where hourly lectures on agricultural and horticultural topics, accompanied by motion pictures, are given. The company is showing a large number of oil paintings representative of scenes along the line through Nebraska and beyond.

PRACTICE CHARITY AT HOME

School Children Athrill Over Preparations for Thanksgiving.

TO KEEP DONATIONS IN STOCK

Plan Meets with Unhesitating Endorsement and Co-operation of Those Devoting Their Time to Charity.

In this pre-Thanksgiving season schools and the homes of school children in Omaha are athrill with preparations for the annual exercises and festivities, to which, this year, a new and novel interest has been added. It is a yearly custom, established when the school system of the city was in its infancy, for the children of the well-to-do to bring donations of food, clothing or money to their school buildings for distribution among the various charitable institutions.

Spirit is Intensified.

The spirit of Thanksgiving in the schools is the spirit of Christmas intensified. The pupils expect less and give more and the surprises are greater and the donations more varied—infinitely more varied and by far more practical. Everything from a block of coal to a six gold piece, from a pair of trousers to a barrel of dill pickles, from a glass of jelly or a crate of potatoes to a fine and frost-sprayed kimono is brought and gladly given and as such gladly received. Nothing is unwanted, nor is anything given which cannot be utilized. There is a place for every article and it is put in that place by those who know best what is in need and what is needed.

"This custom," said an educator who is interested in charity, "is one of the most

Club House Prairie Park Club

The Prairie Park club is now an incorporated body, whereas heretofore it has been a purely social organization with civic beautification as its main purpose. Incorporation was made necessary by the decision of the membership to construct a club house and garage on lots at Twenty-sixth and Saller streets. This step was taken to avoid the possibility of garages being built on the lots in Prairie park, which is now free from fences and outhouses of every kind.

endeavorment and the co-operation of the men and women devoting their time and energies to charitable work.

A certain percentage of donations will be kept only in the schools where it is known they can be used to advantage and where they will help those who would not otherwise receive assistance. The educators and philanthropists are agreed that the 500 teachers of the city have the most accurate information regarding the wants and needs of the 21,000 pupils who constitute the training army of citizenship. And so in this belief they have sanctioned the plan to keep clothing, food or fuel out of the donations and will leave the teacher free of restraint in the distribution of these during the year.

This custom of keeping alive the original spirit of Thanksgiving—the season when formal thankfulness for the blessings of life is expressed—has brought a cheerfulness and a uniqueness to the Omaha school life. As the day for the donations draws near the pupils become more restless, more observant and more part on the campus with keener enjoyment of their comradeship. It is the time of the year when selfishness is least evident; quarrels are less frequent; disagreements are settled with the least difficulty, and, say the teachers, there is more co-operation in school work and a greater desire to help the school and those needing help who are not of the school.

He May Be Defeated by His Own Evidence

X-ray photographs introduced in federal court by Milton E. Goodenough of Logan, Ia., intended to show that he was injured to the extent of \$25,000 in a Union Pacific wreck near Logan, show instead that the injuries on which the suit is based might have been caused by other agencies. It thus proves true Goodenough will lose his suit against the company.

Stomach Blood and Liver Troubles

Much sickness starts with weak stomach, and consequent poor, impoverished blood. Nervous and pale-people lack good, rich, red blood. Their stomachs need invigorating for, after all, a man can be no stronger than his stomach. A remedy that makes the stomach strong and the liver active, makes rich red blood and overcomes and drives out disease-producing bacteria and cures a whole multitude of diseases.

Get rid of your Stomach Weakness and Liver Laziness by taking a course of Dr. Pierce's Golden Medical Discovery—the Great Stomach Restorative, Liver Invigorator and Blood Cleanser. You can't afford to accept any medicine of unwise composition as a substitute for "Golden Medical Discovery," which is a medicine of known composition, having a complete list of ingredients in plain English on its bottle-wrapper, none being attested as correct under oath. Dr. Pierce's Pleasant Pellets regulate and invigorate Stomach, Liver and Bowels.
