The New Evening Sowns Lady Duff-Gordon Describes

the Widening Skirts and a Few **New Dresses Pretty** 

Are Wearing

ADY DUFF-GORDON, the famous "Lucile" of London, and foremost creator of fashions in the world, writes. each week the fashion article for this newspaper, presenting all that is newest and best in styles for well-dressed women.

Lady Duff-Gordon's new Paris establishment bring her into close touch with that centre of fashion.

Lady Duff-Gordon's American establishment is at No. 17 West Thirty-sixth street, New York City.

dress, a form of attire to which I continue to be devoted, seeing that it is as comfortable as it is charm-ing, though skirt and corsage are of ing though skirt and corsage are of different materials, the one being of the ratine and the other of chiffon, and both showing an embroidsred device of self-colored soutache. The skirt is cut up at the left side for some six or seven inches to make its scantiness more comfortable for walking and also to give fascinating peeps of an inner lining of Paisley silk, whose mave shadings are here and there just brightened by a gleam of rose, this prettily pat-terned silk being used again to fin-sish off the lacings of black satin which hold the opening corsage to-gether over a rounded chemisette of flesh pink chiffon edged with a pip-ing of white satin. The coat is, of course, of the ratine, the braiding being so ar-ranged as to accentuate the straight-ness of its cut at the back, while

ranged as to accentuate the straight-ness of its cut at the back, while the front fastens over in a deeply curving line from high up at the right to low down at the left side, the facings, which can be more or leas fully displayed as desired, com-bining black satin and mauve silk, and also introducing some of the Paisley patterned fabric. Such a costume as this I consider an immediate necessity for every one, for, as worn with some of the wrap-over stoles and great muffs of far, it will be warm enough for, at any rate, the first few weeks of the cold weather, while afterwards, I need hardly point out to you, that the little dress will accommodate itself charmingly to companionship with the long fur cost, which, inwith the long fur coat, which, in-deed, only looks well in such com-panionship, and would be ruined altogether if, at its opening, it dis-closed a separate and dark skirt and a lighter lingerie blouse. There is still another dress for Miss Leslie, and that an evening tol-

Miss Leslie, and that an evening toi-lette, all soft and clinging and elu-sive, its outer fabric being white chifton, while beneath this comes faintly flesh pink ninon. The curves of the decollete are all followed by a line of diamonds, these shining stones being, indeed, the only thing to mark at any distance the dito mark-at any distance-the dibetwee bodice and body! Diamonda also edge the scallops of the short sleeves, the skirt, in its turn, being cut in this new way and finishing off with a double row of scallops-and diamonds. And then, just beneath the bust, there is folded a scarf sash of blue, the blue of a Summer night sky in the tropics, with just a few diamonds scattered like stars on the ends, which, by the way, fall directly in the front instead of, as usual, at the side, having there for background a very short diamond broidered tunic of the white chiffon. Blue, too, is the chiffon cloak, whose filmy semi-trans-parency bears the light burden of wide bands of silver lace, and is all draped up at either side into silver-wrought ornaments. Do you like the picture? It is, i think I may say without vanity, rather an "alluring" one, if so be that the dress has the right wearer -young, fair and slight-though, of

-young, fair and slight-though, of course, it would be obviously un-suited and unbecoming to any other. Then, as Miss Hilda Moore-who appears in the same play-is tall and dark and strikingly handsome,

she has given me an opportunity to display some of my best-loved Ori-ental schemes and, in particular, a dress whose closely enwrapped folds are almost suggestive of mummy draperies. But, then, after the figure has been most closely outlined, right down to the slender ankles, I have so entwined it that the soft draperies spread outward at either side to form, when the wearer is in

repose, a sort of base or pedestal for the statuesque figure. For example, in this particu-lar dress, i have used "wine-dregs" charmeuse, and underlined it about the feet with a beautiful but subdued tone of orange while hitser on i the feet with a beautiful but subdued tone of orange, while higher up I have outwardly adorned it with broad bandings of dull gold lace, though their presence can only be just guessed at occasionally, inas-much as they are hidden by a close-ly enwrapped tunic of dark raven's-wing blue marquisette. Starred over its double bordering is a little leaf-like device brohlered in gold and white, and beyond this again scomes a band of Oriental silk, which blends purple and blue and rose and blends purple and blue and rose and

Still some other colors, too, there are in the swathed waistband for this, while primarily of the purplish charmeuse is bordered with two daringly different blues, just a narrow line of green also showing itself, while then there is one of those long, quill ornaments which I love, its gauzings of blue-green slik giving place quite soon to a tassle of purple cord and pendant pearls, while, finally, there are shin-ing strands of purple and crystal bugies, tipped with tiny balls of orange velvet. The corsage is of the kimono variety, its dark blue marquisette veiling flesh pink chif-fon, and its cross-over folds edged at either side with a piping of differ-ently shaded blue, only the left side being further adorned with some of the mild bridger. the gold broidery. This is a gown which satisfies me, both as regards color and contour, and I am thank ful to think that nowadays the gen-eral public can be depended on to appreciate effects which, not so long ago, they would have not only failed to understand, but also -and actually-disapproved.

A "Picture" Evening Dress of Green Taffeta, New "Lucile" Model.

And now let me describe some dresses I have made for some pretty English actresses. There is, for example, one dainty dress, for that dainty actress End

Leslie, in which filmy, mellow-toned net and lawn, Valenciennes lace and hand-embroidery are all brought to gether to make a semi-

## How the Frog Helped in Two Discoveries

S URELY it is one of the oddes: of coincidences that the frog should have been primarily accountable, each time through an accident, for two very important scientific discoveries, both connect-ed with electricity-namely, gaivan ism and the X-ray.

ism and the A-ray Mos people are familiar with the story of the discovery of galvanism, which was due to the accidental circumstance, that one of a humber of frogs legs, prepared for cooking in the laboratory of the physicist Galvani, came into contact with an electric wire. Galvani's wife was sick, and he was getting ready to fry the dainty batrachian morsels, when suddenly one of the legs be gan to dance.

discovery of the X-ray was that so simple and obvious elever student in a physical labora-

tory might have made it. Mere chance led Professor Roentgen to come upon it A large Crookes ibe-i e. a vacuum bulb of giaas, arough which a current of electri tube city was passed, producing the peculiar glow known as fluores cence-was suspended over a table and in a drawer beneath there waa pasteboard box containing one lozen unexposed photographic plates.

It so happened that some keys were lying on the table, just above the drawer. When an attempt was afterward made to use the plates for photographic purposes, they were found to be "fogged," but on cach one of them was a fairly clear imprint of the bunch of keys.

Thus it became apparent that reserve which had penetrated through the wooden top of the table and had been so far interrupted by

the keys as to make a shadow-pic ture of the latter on the photo graphic plates. It was at once ob vious that a new fact in physics had been discovered, and thereupon a series of experiments was under-taken with objects of various kinds placed on the table-top under like nditions.

Everything imaginable was tried. One of Professor Roentgen's assistants picked up a dead frog (which One had been used for some other labor had been used for some other inhor-atory work), and put it in the place ordinarily occupied by the bunch of keys, a fresh photo plate, as usual, reposing in the drawer beneath The result was a revelation, for the shadow picture made was not of the frog, but of its skeleton. From which fact, it was learned

that fles, was transparent to the newly discovered rays, whereas bones were opaque to them.

at a graduated speed and in fixed quantities. To use the machine, a pad is placed on the forehead and through this pad the water flows

The massage-like action of the passage of water across the forehead has a most soothing effect, tory. and even the most restless soon succumb to it. The explanation seems to lie in the fact that the

rhythmic sensation produced by the steady flow of the water begins eventually to pall on the patient's mind, and the pure monotony of the Thus the loud ticking of a clock in a library frequently puts readers to sleep although quite involuntarily on their part. The dripping of a leaking faucet, the patter
