TELLS OF TEACHING CHILDREN

Interesting Books that May Be Had at the Public Library.
MONTESSORI BOOK ON SHELVES
Widow of American Diplomat Writes Entertainingly of Things She Has Seen and Famous Personages She Has Met.
Last year McClure's Magazine published a series of articles by Josephine Tozier on the Montessori method. By this means a new educational system reached the people first, instead of making its initial appeal to a professional class. Dr. Maria Montessori's book, "The Montessori Method," just translated from the Italian, found its public already awaiting it, eager to read the author's own exposition of her subject. Consequently her book had an unprecedented advanced sale.
While many of the ideas advocated by Dr. Montessori are not new in themselves, yet their union into an educational system is new and in no degree lessens the author's great work.
Dr. Montessori is an Italian physician—the first woman ever granted the degree

of doctor of medicine by the University of Rome. For more than two years she was directress of the Scuola Ortofrenica—the mind-straightening school—to which the feeble-minded children were sent from all parts of Rome. The results which she attained here were considered miraculous, children attending the school passing the same examinations in the public schools as normal children of the same age.
For seven years after leaving this work she studied every branch of experimental pedagogy and finally, in 1906, equipped with all this knowledge, was made directress of some new infant schools in a crowded tenement district of Rome.
During the long years of preparation Dr. Montessori had been laying the foundations of her educational system.
At the mind-straightening school she had become convinced that there was something wrong with the education of the normal child.
Looks for Reason.
In her own words, "While everyone was admiring the progress of my idiots, I was meditating on the reasons that could keep the happy and healthy common school children on so low a level that my unhappy pupils were able to stand beside them.
As the result of her thinking she has incorporated into her system of training the normal child, many methods and

much apparatus which we used originally only for defectives.
Special attention is paid to the training of the senses, particularly to the sense of touch.
Remarkable results have been attained, especially in the rapid mastery of writing, reading and numbers, and her pupils have been taught in such a way so to experience the joy of a discovery when any new thing is learned.
While many may differ from Dr. Montessori, her book cannot fail to suggest, and will stimulate not only teachers, but all who are interested in the advancement of humanity. Henry W. Holmes of Harvard, who has written a critical introduction to this book, says "We have no other example of an educational system—original at least in its systematic wholeness and in its practical application—worked out and inaugurated by the feminine mind and hand." (Call for library number 3713, M 76.)
Tells of Famous Personages.
In "Intimacies of Court and Society," an unconventional narrative of unofficial days by the widow of an American diplomat, the author writes in a chatty informal way of things she has seen and famous personages she has met. Her style lacks the distinction of Madame Waddington's, but it is vivacious and her book reads as easily as a novel. She has

both a clergyman and a doctor of philosophy, has been among boys and done work with them that I consider hardly less than epoch-making in significance.
The "Boy Problem" passed through six editions and is still the best book on the subject.
His new book, "The Coming Generation" is one of a series of books edited by Shailer Mathews, which are written by specialists in untechnical language and which aim to present, as Mr. Mathews says, our "social assets," instead of our "social liabilities."
"The Coming Generation" gives a very readable account of what has been accomplished for the betterment of children in America. It touches upon the underlying national causes which must be taken into account as affecting young people. "The problem of living in a rich and luxurious time, the problem of living successfully in cities, the problem of moral education and the problem of saving the home."
There is a list of books for those who wish to study the subject and a program for the betterment of boys and girls. (Call for library No. 113, F 74.)
Deceived.
Wiggins—Did you say you bought the car from a friend?
Biggs—Well, I thought he was a friend until he sold it to me.—Pathfinder.

AND THE FLAG IS STILL THERE

Fort McHenry No Longer an Army Post, but Becomes a Public Park.
The reveille which has echoed across the river and through historic Fort McHenry for the last 127 years was sounded Saturday morning for the last time, marking the abandonment of the old fortification as a military post. The call aroused the coast artillerymen who formed its garrison, and they entrained for Fort Strong, Massachusetts. Back of the ramparts of the old fort the flag will continue to wave as it did on September 12, 1814, when Francis Scott Key was inspired to write the nation's anthem. The fort will be closed to visitors for the present, but will be reopened and continued as a national memorial.
Several measures looking to selling the property have been presented to congress, but none ever has been passed. Historical societies are at work to have the government maintain it for the benefit of coming generations. In 1875 the government bought seven acres of ground and erected a fort in the shape of a five-pointed star, built of brick and filled in with dirt, which still stands. Armament, heavy in those days, was placed around the breastworks to defend the approach

THE PERILANT AND JUDICIOUS USE OF Newspaper Advertising is the Road to Business Success.

to this city, and when the English fleet sailed up the Chesapeake bay the soldiers at the fort were joined by a number of public spirited citizens.
For several days the British fleet poured a merciless fire into the fort, but the defenders repelled with the same kind and so well did they train their guns that the Englishmen were forced to abandon the conquest and sail away. Francis Scott Key, a prisoner during the night, was unaware of the danger that stood the terrific rain of fire which was poured into it and it was not until the "dawn's early light" broke over the Patapsco river that he knew that the fort was safe.
While the fort as a military post had been obsolete for years so far as its use as a defense was concerned, it has sheltered many men who now are high in the service of the government and has been the scene of many brilliant social functions and weddings. Entwined in its history are many romances which would make interesting reading. Beginning on Monday, civilians will guard the fort and raise and lower the flag every day, making it seem more like a city park than a military post.—Baltimore Sun.
