Correct automobile lubrication is a serious problem. mentals are simple. We will cover them in a question-and-answer form.

Question: What moves your car? Answer: Power. Question: What determines your power? Answer: Your motor, your fuel and your lubricant. If any one of these factors falls short in full efficiency, you receive less than full power. The most of the power lost is taken up by friction—wear on the moving parts.

Question: What will give you the most efficient lubrication? Answer: An oil of the highest lubricating quality whose "body," or thickness, is best suited to the feed requirements of your motor.

Question: Suppose you use oil of lower lubricating quality or of less correct "body." What are the penalties? Answer: Many. Among them are: (1) Escape of the explosion past the piston rings and loss of compression. (2) Unlubricated cylinder walls at the upper end of the piston stroke. (3) Imperfect lubrication of many of the bearings. (4) Excess carbon deposit. (Due to the oil working too freely past the piston rings and burning in the combustion chamber.) (5) Excessive oil and fuel consumption. (6) Worn wrist pins. (7) Rapid and unnecessary deterioration of your motor. (8) Loose bearings. (9) Noisy operation.

Question: How can you determine the correct oil for your car? Answer: By consulting the lubricating chart-printed in part on the right.

Question: What assures the reliability of this chart? Answer: The chart is the result of the most far-reaching and most thorough study of automobile lubrication that has ever been undertaken.

It was prepared by a company whose authority on scientific lubrication is recognized throughout the world-the Vacuum Oil Company.

It was prepared after a careful analysis of the motor of each make and each model of American and foreign car.

The superior efficiency of the oils specified has been thoroughly proven by practical tests.

If you use oil of lower lubricating quality or of less-correct "body" than that specified for your car, your motor faces unnecessary friction, loss of power, and ultimate serious damage. A booklet, containing our complete lubricating chart, together with points on lubrication, will be mailed on request.

The various grades, refined and filtered to remove free carbon, are: Gargoyle Mobiloil "A," Gargoyle Mobiloil "B," Gargoyle Mobiloil "D," Gargoyle Mobiloil "E," Gargoyle Mobiloil "Arctic."

They are put up in 1 and 5 gallon sealed cans, in half-barrels and barrels. They are sold throughout the world. All are branded with the Gargoyle, which is our mark of manufacture. The dealers listed below carry ample stocks of Gargoyle Mobiloils and are provided with our complete chart of recommendations. This will enable them to select the correct grade for your car.
