Says About Pasteurized Milk

While visiting in Omaha Monday in company with a large body of dairy students from the University of Nebraska at Lincoln, Prof. J. H.

Francien, Professor of Dairy Husbandry, had the following to say concerning pasteurised milk and The Alamito Dairy:
"If I lived in Omaha I would refuse to use anything but pasteurised

milk. The tendency nowadays is toward preventive medicine and there is no one thing so important in keeping down disease as having clean, disease free water and milk. Typhoid, Scarlet Fever and other contagous diseases are easily carried in both water and milk. Everybody who knows agrees

to this. The people ought to know it.

"Disease prevention is economic—in one small eastern community where records were kept it was found, that 10e cases of typhoid cost that community in deaths, loss of time by workers, nurse, doctor and medicine bills \$500,000. Most of this could have been saved by making the water supply and the milk supply safe.

"I consider the Alamito Dairy as complete a plant as there is in this part of the country. They have everything necessary for properly handling their milk. Their methods are modern and efficient and meet with scientific approval. Pasteurisation is the only safe way to treat milk and Alamito's sanitary plant pasteurises as it oughts to be done.
