QUICK RELIEF FROM CONSTIPATION

Get Dr. Edward's Olive Tablets

That is the Joyful cry of thousands since Dr. Edwards produced Olive Tablets, the substitute for calonici.

In Edwards a practicing physician for 17 years and calonel's old-time enemy, discovered the formula for Olive Tablets while treating patients for chronic constipation and torpid livers.

Dr. Edwards' Olive Tablets do not contain calomel, but a healing, soothing vegetable lazative.

No griping is the "keynote" of these lit-lie sugar-coated, olive-colored tablets. They cause the bowels and liver to act normally. They never force them to unnatural action. If you have a "dark brown mouth" now and then—a bad breath—a dull, tired feel-ing—elok headache—torpid liver and are constipated, you'll find quick, sure and only picasant results from one or two little Dr. Edwards' Olive Tablets at bedtime. Thousands take one or two avery night

Thousands take one or two every night just to keep right. Try them. 10c and 22c per box. All druggists. The Olive Tablet Company, Columbus, O.

SUGGESTION: Anticipate your Nemo needs before prices advance.

WISE WOMEN KNOW WHY!

VEMO No. 403 was the first corset made with Nemo Relief Bands. It dates back to 1905-of course it has been improved since. Thousands of women have worn No. 403 all these years, and will wear no other.

Does No. 403 need further

No. 403 is for women of full figure, flesh well distributed.
Relief Bends take up, support and
reduce a heavy abdomen. Elastic
gores in back of skirt. Coutil or
batiste, sizes 22 to 36—\$4.00.

No. 402 is similar, but for short full figures. No. 405 is for tall full figures-\$4.00.

Every Nemo is an extra value simply as a corset. For the health features, which are priceless, you pay nothing extra.

Kansas City Film Man Shows Figures On the Industry

Lee D. Balsly, a live wire in the moving picture game in Kansas City and the southwest, swept down upon Omaha yesterday from Des Moines, where he was one of the principal speakers before the convention of the Iowa Motion Picture

Besides making an address in the morning at a meeting of the Photo-play Managers' association and Omaha Screen club at the Hotel Rome, Mr. Balsly found time to visit the majority of the local theaters and enew his acquaintance with several

He has moving picture statistics at his tongue's end and can produce facts to show that Nero's little Roman bonfire was a tame affair compared to some of the thrills profuced in the features he represents.

'Did you know that there are more than 300,000 people employed in the moving picture business and that 35,000 of them are actors; and do you know that there is over \$500,000,000 tied up in the business in this country; and that there are 21,000 moving picture theaters in the United States taking in weekly country. picture theaters in the United States taking in weekly pard admissions to the amount of \$12,600,000, which total up to over \$655,200,000 a year?" asked Mr. Balsly.

Mr. Balsly is with the publicity department of the Kansas City Feature Film company, distributor of Paramount pictures.

Will Not Appoint New Union Pacific

While no one in Omaha knows to a certainty, it is not believed that the successor to President Mohler of come generally recognized, and Lydia the Union Pacific will be named un-

til the middle of June.

A special meeting of the directors of the Union Pacific and the executive committee is to be held the last of this week or the first of next in the New York offices, but it is not thought that the appointment of a new president will come up. The opinion prevails that the appointment will be deferred until the regular meeting, set for June 16. In the meantime President Mohler is as active as ever in the management of the affairs of the road. He has gone on a trip over the western lines.

Girl Choked to Death By Rejected Suitor

Aurora, III., May 25.—Gwendolin, a 15-year-old daughter of Mrs. Anna Collins, was found dead in her home here last night, and Jack Armstrong. 19 years old, the police say, has con-fessed that he choked her to death through jealousy. Beside the body was found a cup of poison, which the boy said he intended to take himself had not his nerve failed him.

Armstrong, whose real name is said to be Verhoye, is said to have attempted to pursue his courtship after the girl had tired of him.

Mrs. Collins found the body of her daughter lying on a couch in an un-used room of her boarding house. It is a positive fact that the moment Res-inol Ointment touches any itching skin, the were in the locks on the outside. Upon information from Mrs. Collins. Armstrong was arrested a short time Unless the trouble is due

YELLOW PINE NOW IN THE SAND HILLS

Woodruff Ball Tells of the Valuable Trees Which Are on the Forest Reserves.

MANY ACRES ARE PLANTED

Western yellow pine, valuable for lumber, is now being grown on the national forests of the sand hills of Nebraska, where the government New Telephone Directory-The Nebraska planted thousands upon thousands of trees some years ago, according to Woodruff Ball, secretary of the state forestration commission, who is in Omaha from Valentine attending the convention of the State Association of Commercial clubs.

For a number of years it was thought nothing could be grown but jackpine. But now, Mr. Ball reports. western yellow pine has been set out with apparent success and all trees

"Last year another 800 acres was set out in timber by the government," said Mr. Ball, which now makes a total of about 3,000 acres in the Bessey reserve, formerly known as the Halsey reserve, near Halsey, Neb. The oldest plantations of the jackpine are now from twelve to thirteen years old, and the oldest of the western yellow pine are about ten years old

Jack Pine for Fence Posts. "The idea is that when the jack pine is about fifteen or twenty years old it can be cut for fence posts. This will bring some revenue, and then there will be the western yellow pine Omaha advertising men.

The Missouri film man is always eager to reverse the "show me" formula, being always ready to do most of the showing himself.

It is wonderful what has been accomplished in those sandhills in this matter of forestration. People were slow to take hold of it at been accomplished in those sandhills in this matter of forestration. Peo-ple were slow to take hold of it at first, but it is now going to prove a wonderful thing."

A new government nursery has been provided for in Cherry county known as the Niobrar nursery. The first seeds were planted this year. This nursery will have a capacity of

FOR SICK WOMEN

The Woman's Medicine Has Proved Its Worth.

When Lydia E. Pinkham's remedies were first introduced, their curative powers were doubted and had to be proved. But the proof came, and grad-ually the use of them spread over the Head Until June whole country. Now that hundreds of thousands of women have experienced the most beneficial effects from the uso come generally recognized, and Lydia E. Pinkham's Vegetable Compound is the standard medicine for women.

The following letter is only one of the thousands on file in the Pinkham office, at Lynn, Mass., proving that Lydia E. Pinkham's Vegetable Compound is an article of great merit as shown by the results it produces.

Anamosa, Iowa, - "When I began taking Lydia E. Pinkham's Vegetable Compound I suffered with a displacement, and my system was in a general rundown condition. I would have the headache for a week and my back would ache so bad when I would bend down I could hardly straighten up. My sister was sick in bed for two months and doctored, but did not get any relief. She saw an advertisement of your medcine and tried it and got better. She told me what it had done for her, and when I had taken only two bottles of Lydia E. Pinkham's Vegetable Compound my head began to feel better. I continued its use and now I don't have any of those troubles." - Mrs. L. J. HANNAN, R.F.D. 1, Anamosa, Iowa.

and

knew and used the new Encyclopaedia Britannica

> when it first appeared in 1768

In the 148 years since, the public has paid over

100 Million Dollars!

for a total of over a million sets

The Encyclopaedia Britannica has an amazing history. Outside of the English Bible and Shakespeare it has been the most widely sold work ever published in any language.

No other work, in any language, has been continually published for a century and a half. On no other work have such enormous sums been spent for editorial preparation and for articles. No other work in the world's history has ever enlisted the services of so many famous men.

Of no other work of reference have more than a million sets with a total of more than twenty million volumes been sold.

The eleven editions have been read and used, it is safe to say, by more than 100 million people; and possibly two or three times this number.

This is history. Still more astonishing has been the success of the latest edition. Although the original outlay for the latest edition (a million and a half of dollars) was such that the price per set ranged from \$125 to \$250, more than 75,000 copies have already been sold; that is

The Huge Outlay Involved

(The eleven editions which have appeared at regular intervals throughout the last 148 years have cost more to produce than any other ten works (of reference or anything else) in any language and more than any twenty other works published in English.

The English Dictionary of National Biography The English Dictionary of National Biography has now reached its seventieth volume. The German Encyclopaedia of Ersch and Gruber, begun more than a century ago and still incomplete, has passed its 99th volume. The New English Dictionary, still incomplete, has cost a huge sum, though largely a labor of love. The Century Dictionary, the greatest work of its kind yet published in America, has cost to date more than a million dollars; and there are other large works of reference in French, German, Spanish and Russian.

And the Encyclopaedia Britannica has cost more than the ten largest of these together.)

for the copyrighted

New IIth Edition Britannica the public has already paid \$14,000,000

A Long Sweep of Time

The beginnings of the Encyclopaedia Britannica go back to a world which would seem to us very strange—a time when there were few stage coaches even in England and very few in America; when the first modest steam engines of Watt were beginning to make England the great coal-producing country of the earth, and her industrial empire was being founded upon the discovery of a way to smelt iron with this same coal.

George III was King and the greater Pitt-Lord Chatham—was Prime Minister. George Washington, Jefferson, John Adams, were then little known leaders of the English Colonies which sparsely settled the eastern shore of America. The only American of European fame was Banjamin Franklin.

Link-boys with torches still lighted the gentry through the murky streets of London. A candle was the most brilliant light that any king in Europe could boast. Most people in the Colonies wore homespun clothes. Terrible epidemics were frequent; sanitation was alm unknown and highway robberies abounded in all the countries of Europe.

A voyage to America required from six to ten weeks, or more; shipwrecks were many and a great number died en route from scurvy and other diseases. The Golden Age

The Encyclopaedia Britannica, in its 148 years of existence, has seen and chronicled almost all the great inventions and discoveries which have made the modern world what it is. It was born two years after Watt took out his first patents for the steam engine, and while the spinning jenny and power loom were being perfected. Its successive editions have described the rise of England's great manufacturing industry and Its successive editions have described the rise of England's great manufacturing industry and then that of Europe and America; the first locomotives of Stevenson; the first steamboats of Fulton; the first steamships to cross the Atlantic; the building of the Great Eastern; the laying of the first Atlantic cable; Whitney's invention of the cotton gin; Elias Howe's sewing machine; McCormick's respers and mowers; Sir Humphry Davy's electric light and Faraday's momentous discovery of machine-made electricity; the first dynamos; the first electric motors; Morse's telegraph; Bell's telephone; the development of the modern piano and the mechanical piano-player; the phonograph and its wonders; the wireless telegraph and wireless telephone; the motorcar; the aeroplane; the multiplex printing machines the aeroplane; the multiplex printing machines which grind out newspapers at the rate of 100,000 an hour—in brief, all the modern marvels of human ingenuity which have banished famine from civilized lands and made this the rabbat and made this the richest and most interesting period of human

The Britannica's Part

The Encyclopaedia Britannica has chronicled all this progress, been contemporaneous with it. But it has been more than that; it has deeply contributed to this progress. We know that far back it was the reading of articles on Electricity and Chemistry in the Fourth Edition of the Britannica which turned the mind of Faraday to scientific research. It was the articles of Thomas Thomson in the Third Edition which made known the ideas of John Dalton which were the foundation of modern chemwhich were the foundation of modern chemistry. The ideas of Malthus and of James Mill and many other great thinkers first found popular exposition in the Britannica. All the notable men of science, scholars, and men of letters from the days of Sir Walter Scott and Playfair, Thos. Young and Lord Jeffrey down to the present time have been contributors to

to the present time have been contributors to
the successive editions. And many of its longer articles
have subsequently been published in book form.

Many of the most brilliant writers the English race
has produced. Lord Marauday, DeQuincey, Huxley,
Mathew Arnold, the poet Swinburne, Lord Morley, Lord
Bryce, Robert Louis Stevenson, and Sir Lealie Stephen
have contributed notable articles.

The Britannica has been and still remains not merely
a vast repository of knowledge, but it has a distinguished
place in English literature as well. And never was this
true in a higher degree than in the new Eleventh Edition,
which has brought together contributions of more than
1520 of the best-informed minds now living. Yet with all
its crudition, its scholarship, its brilliant literary style,
the Britannica is none the less first and foremost a practical work for everyday use by the busy men and women
of to-day.
