

Save the Babies

Recent figures show that out of 2,500,000 births in the United States in one year, 500,000 babies died before completing their first twelve months. An eminent physician ascribes one-fifth of these deaths to intestinal diseases, largely traced to unclean milk.

KNOW YOUR MILK

Is your baby to be listed among the lost one-fifth? You can help to reduce this toll of young life by exercising a little discretion in choosing milk. There is only one kind of milk for the baby—safe milk.

Alamito Milk Is Safe;

It's Pasteurized

Practically all milk contains disease-carrying germs. Unless these are killed off, milk is harmful. Pasteurizing is the only effective weapon against dangerous bacteria. It kills them by a process of heating and rapid cooling. Pasteurized milk is not boiled; the lactic elements are not destroyed.

MILK IS BEST BODY BUILDER

Milk is a perfect food, combining all the elements of nutrition in a form easily digested by growing children. Alamito Milk is a perfectly pasteurized product of healthy, well-pastured cows. Alamito milk is the kind the doctor recommends.
